

# **Ocean Surface Salinity Features as Observed by SMOS and Aquarius**

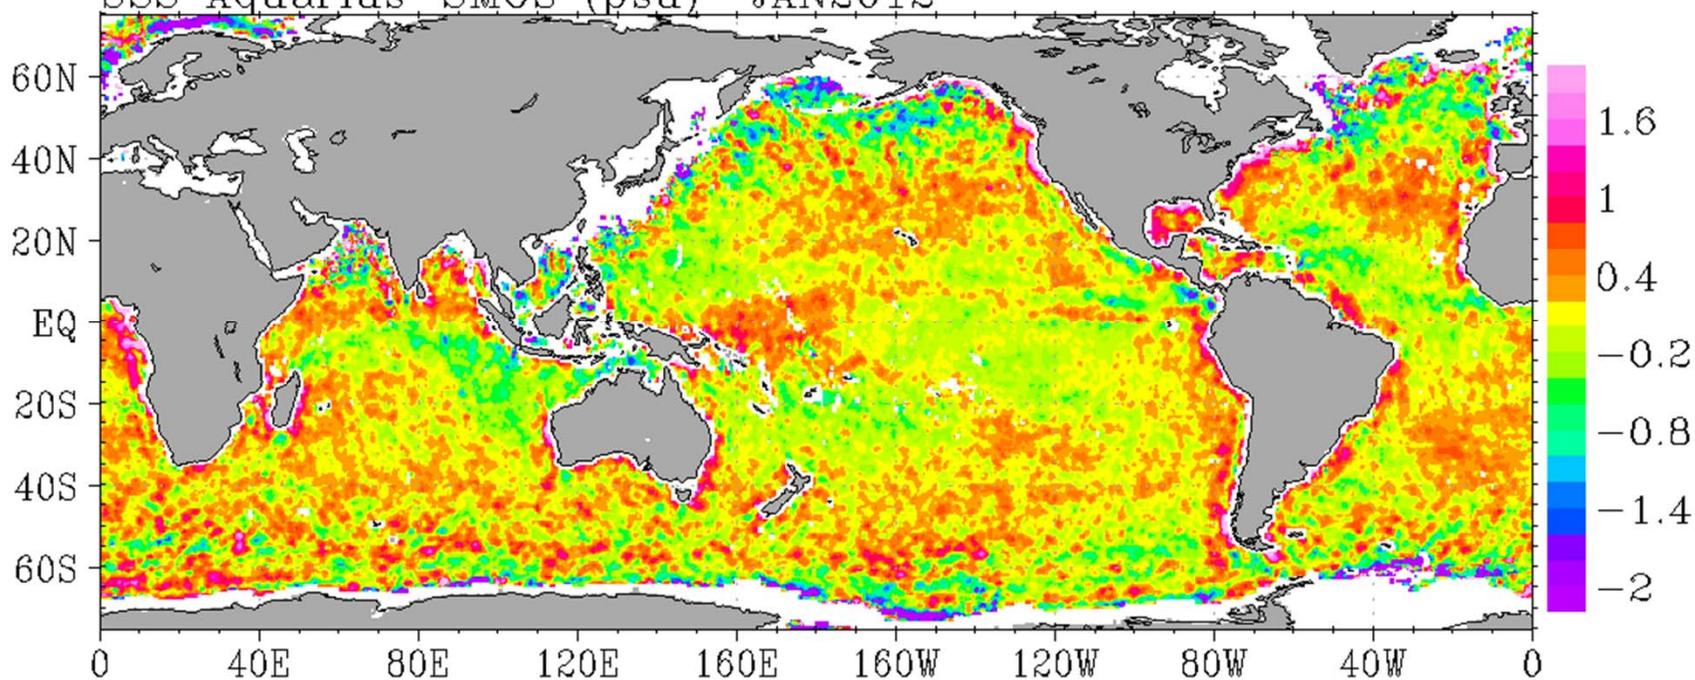

W. Timothy Liu and Xiaosu Xie  
Jet Propulsion Laboratory

➤ picking the low lying fruits

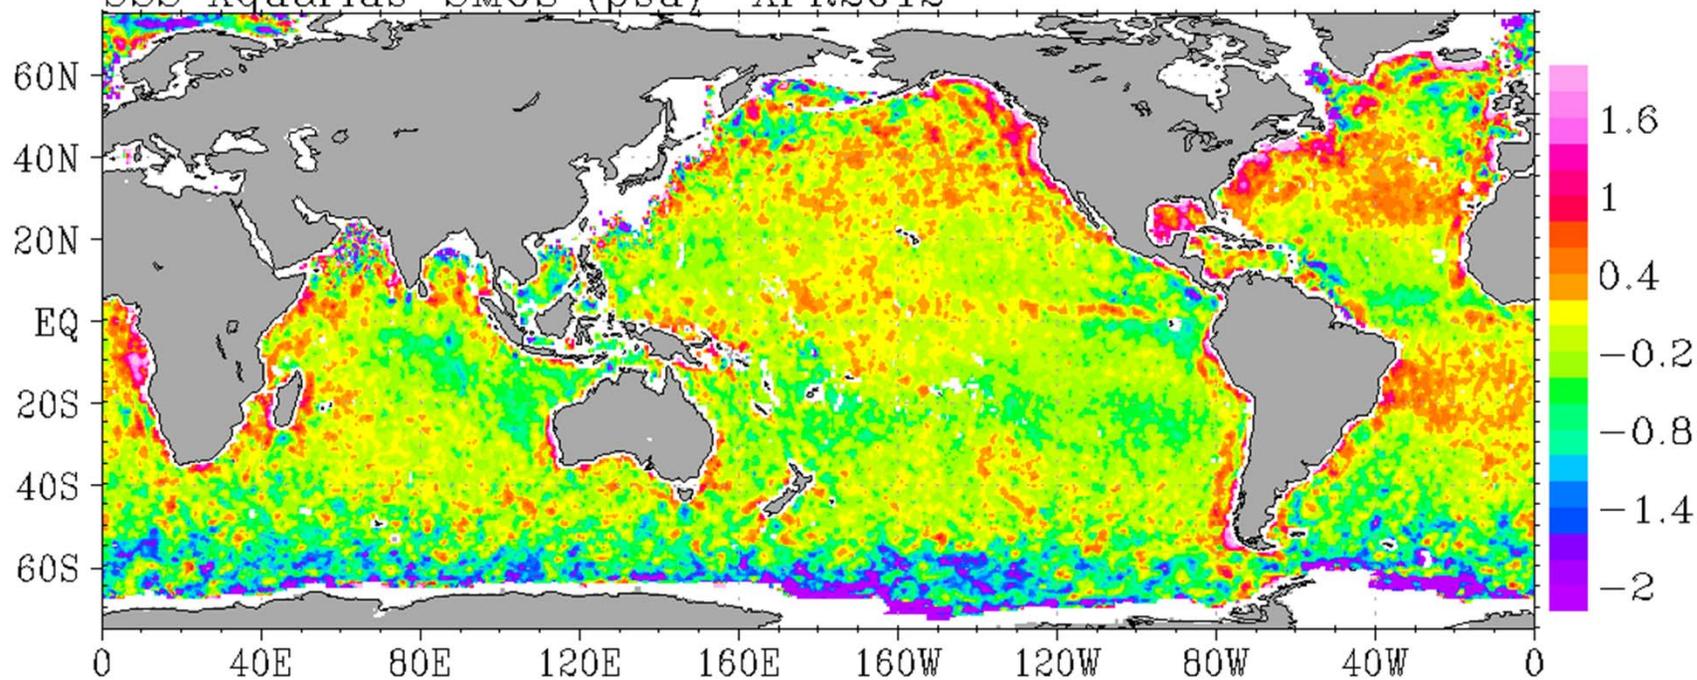

SSS Aquarius-SMOS (psu) OCT2011

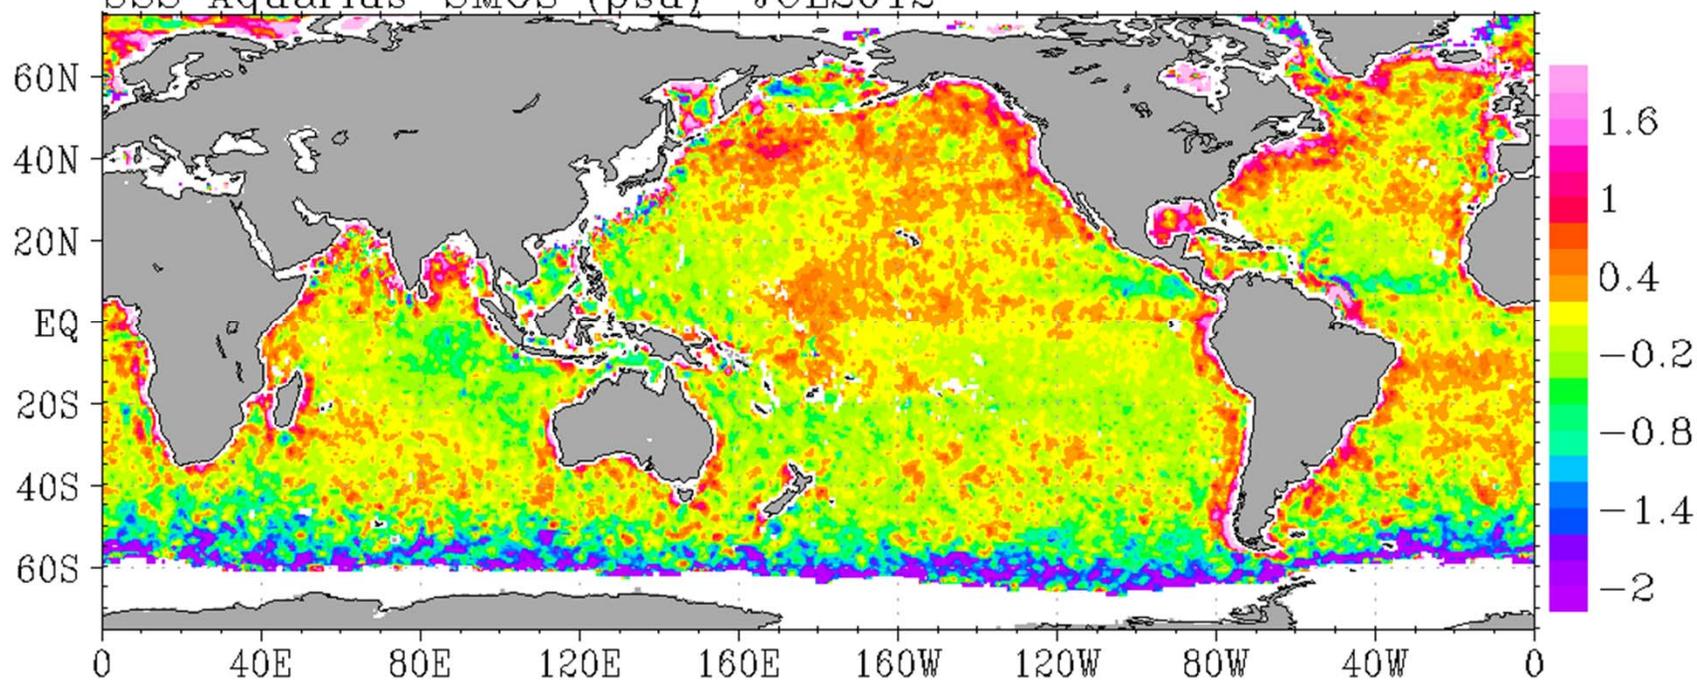

SSS Aquarius-SMOS (psu) JAN2012

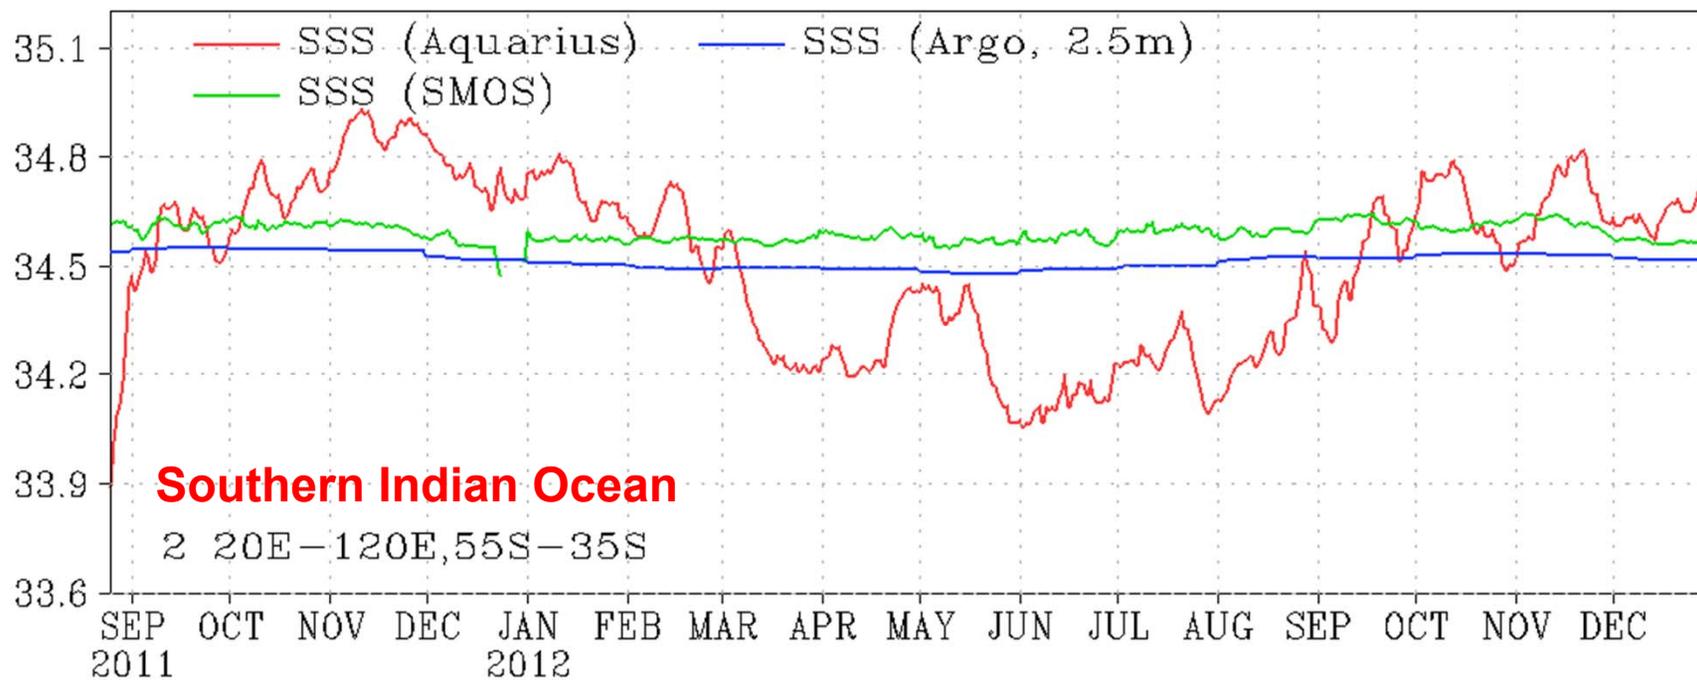

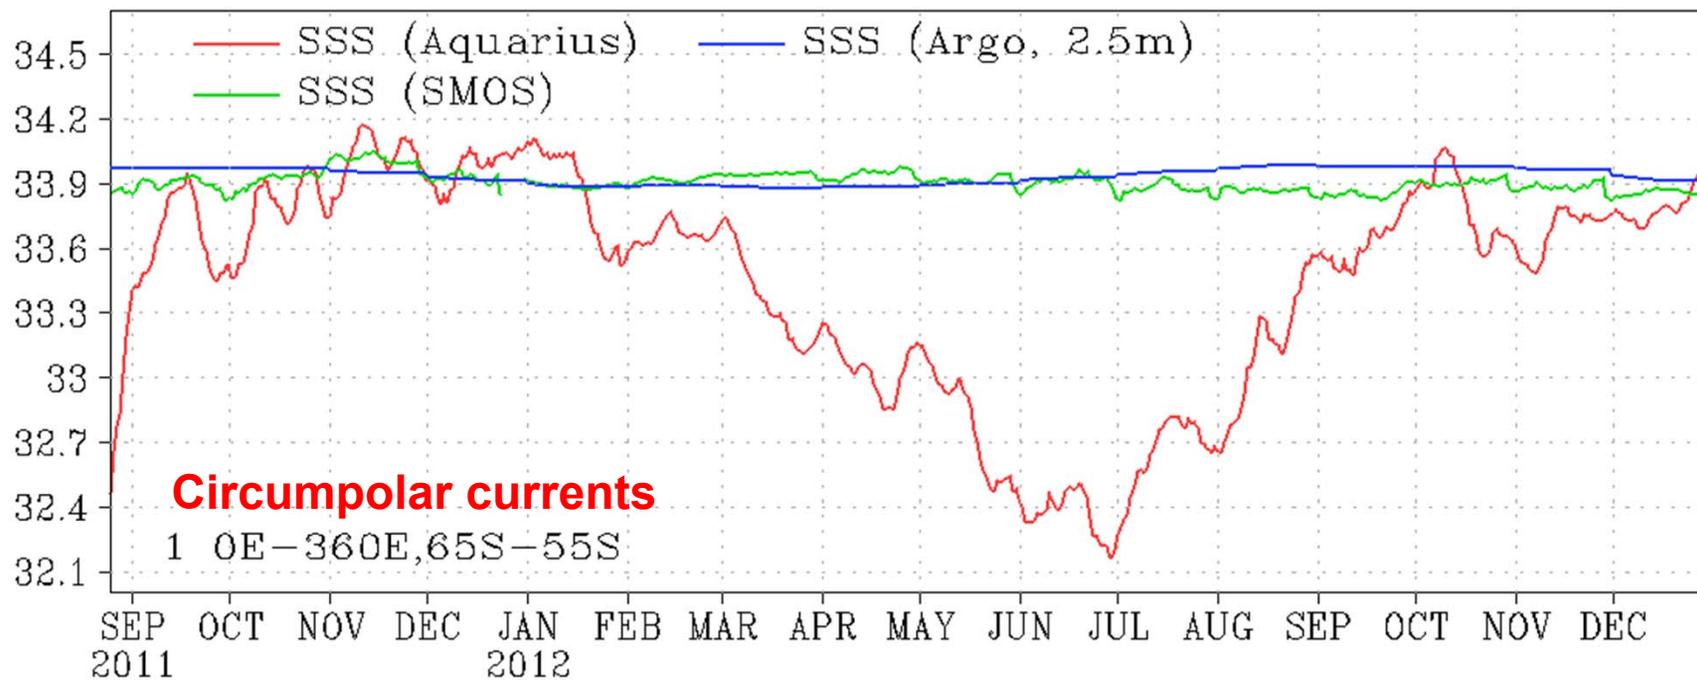

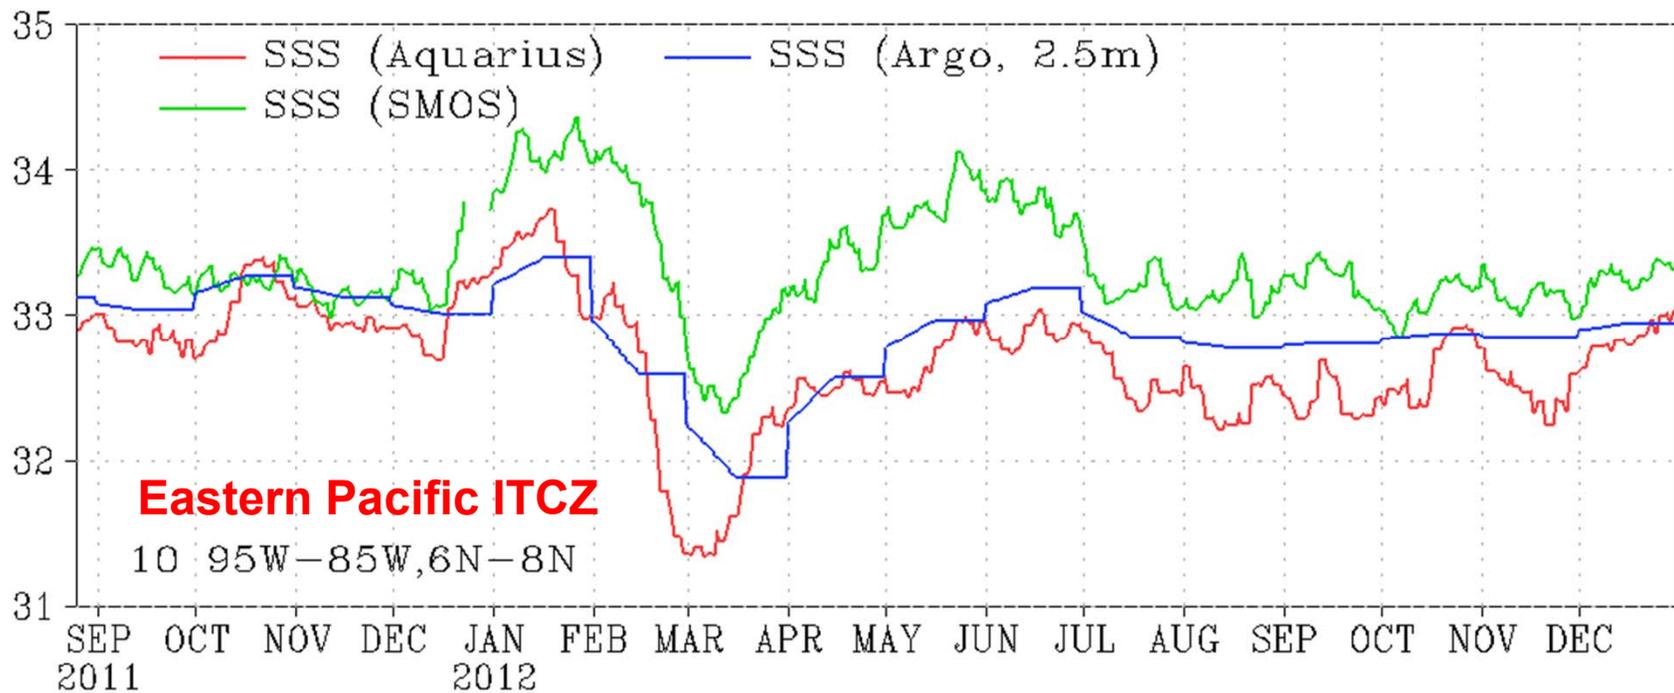

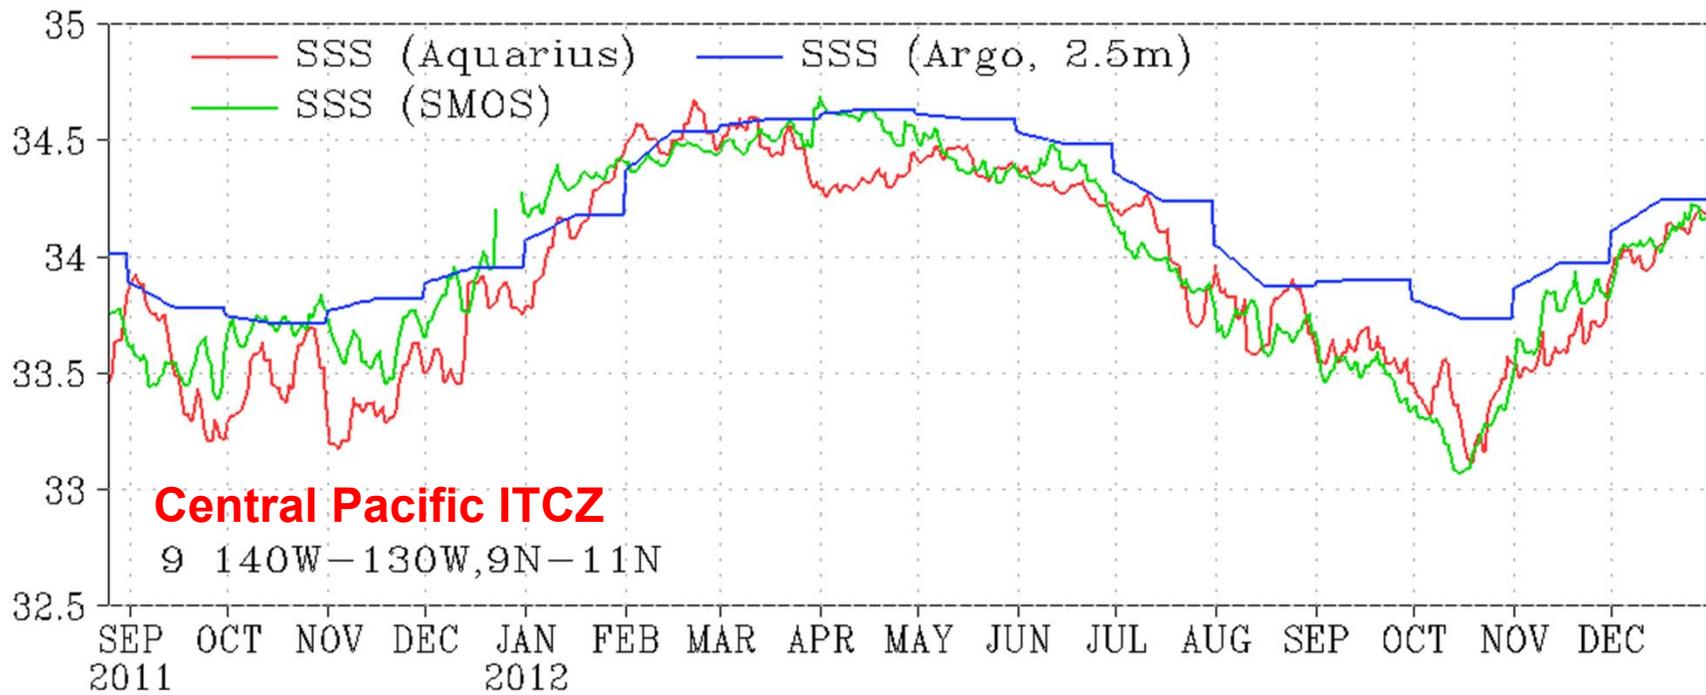

SSS Aquarius-SMOS (psu) APR2012

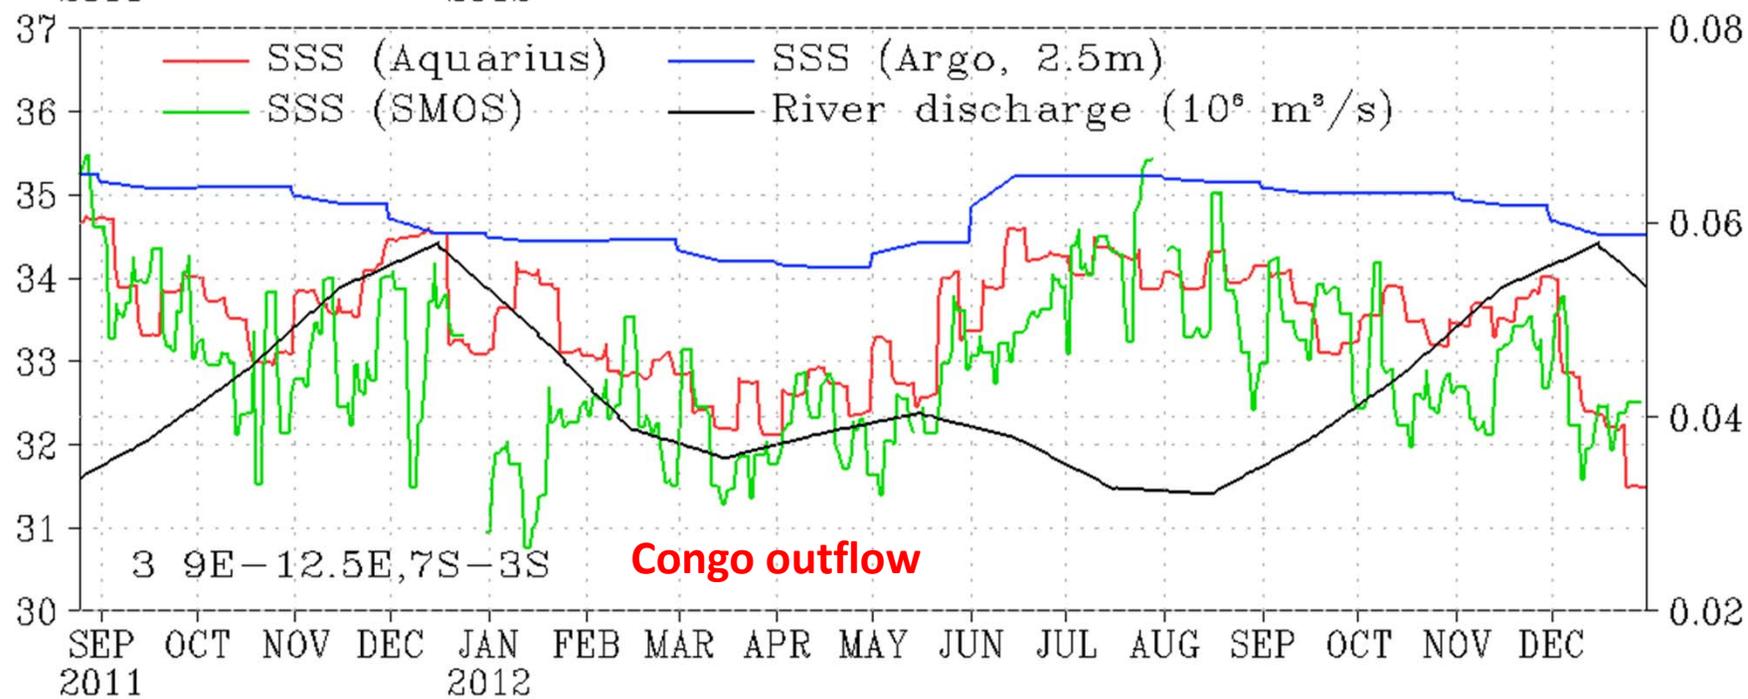

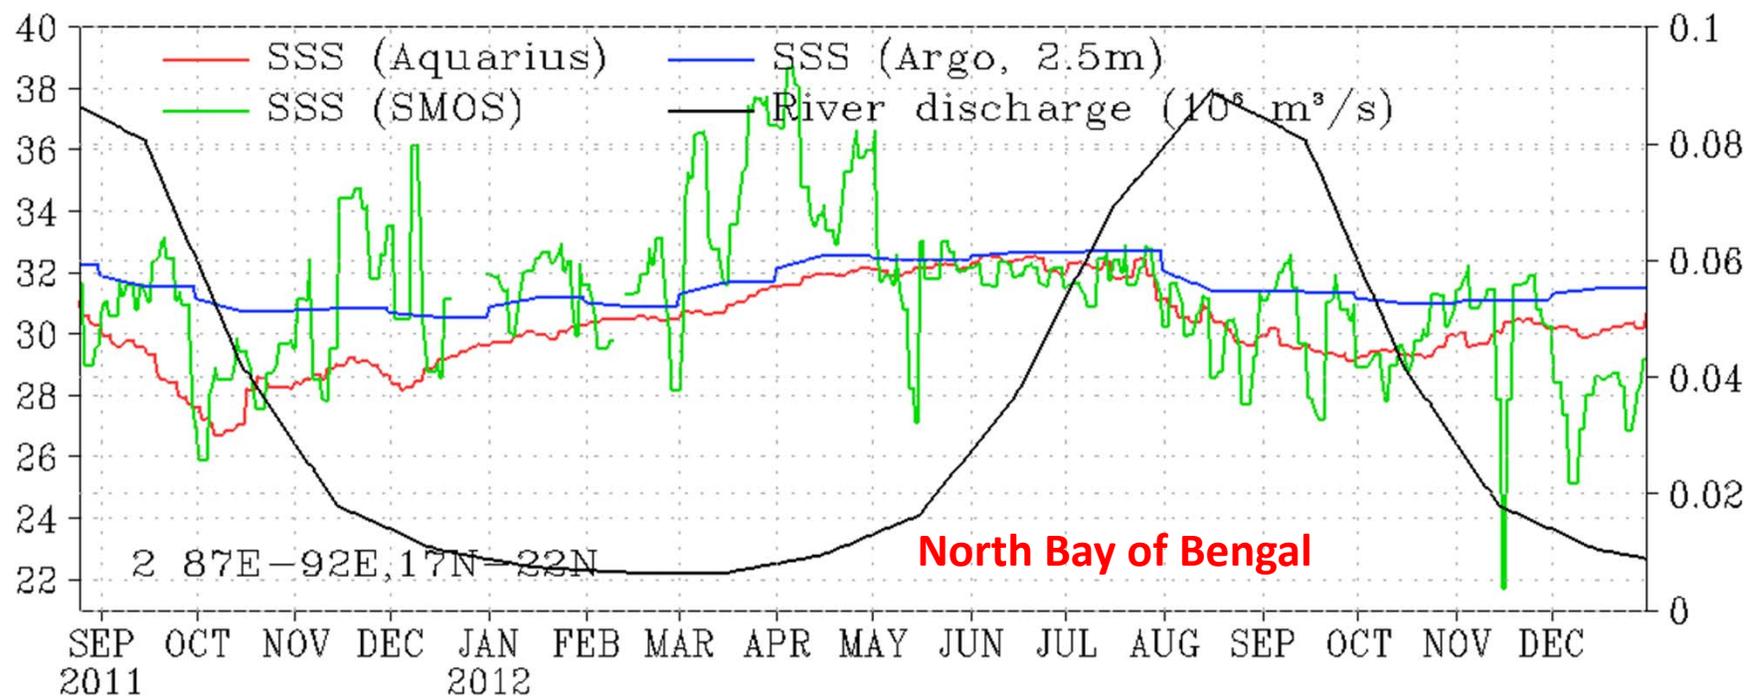

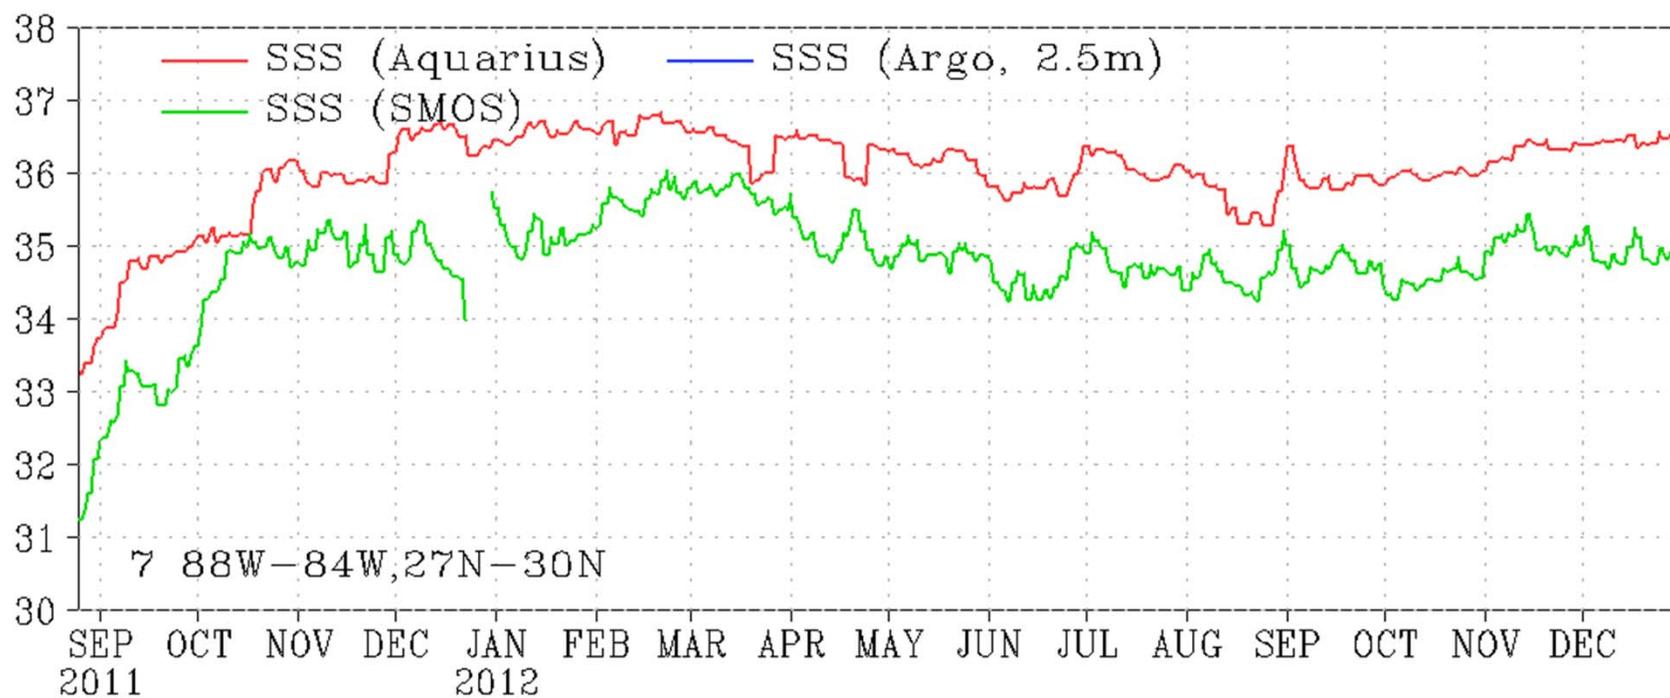

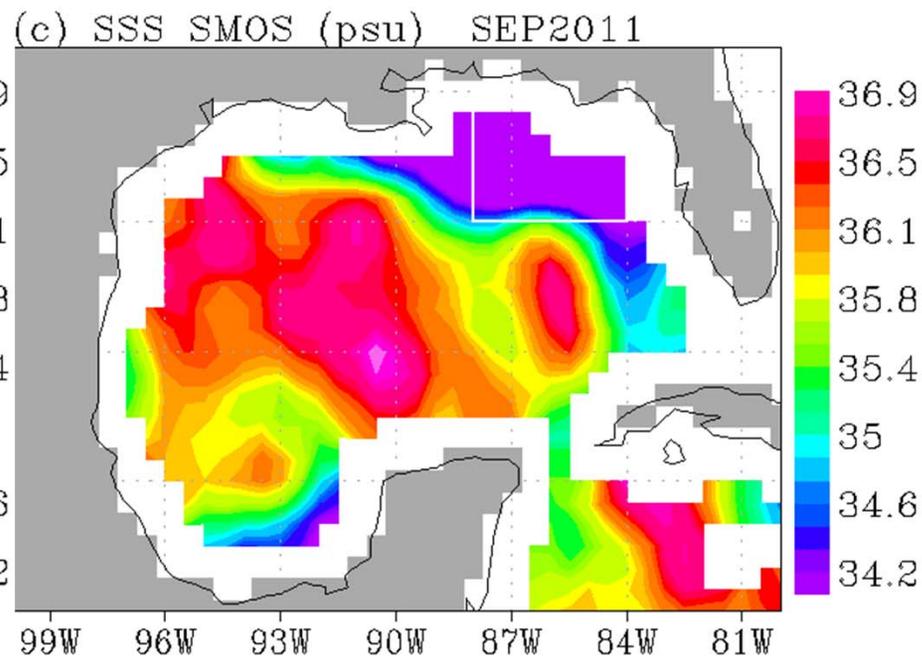

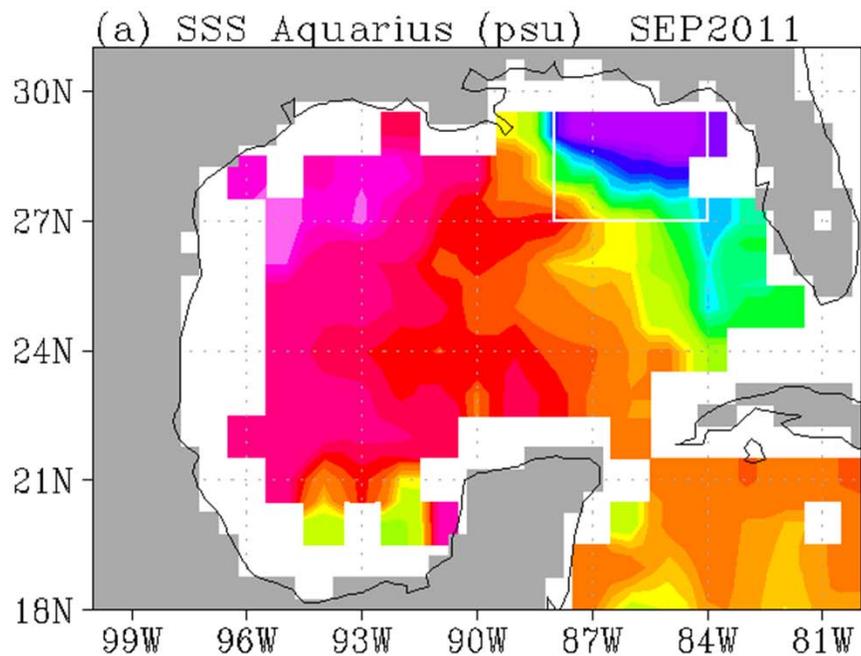

SSS Aquarius-SMOS (psu) JUL2012

## Milestones Completed

- Acquire in situ data
- Identify spacebased measurement
- Collocate data and train statistical model
- Produce 9-year data
- Validate data and examine deficiencies

□ Statistical model was developed using support vector regression

□ Input (daily):  $\sin(\text{day})$ ,  $\cos(\text{day})$ , lat,  $\sin(\text{lon})$ ,  $\cos(\text{lon})$ , SST (AMSR-E), Chl-a (SeaWiFS+MODIS TERRA+MODIS Aqua), SSS (Levitus climatology), Mixed layer depth (GODAS).

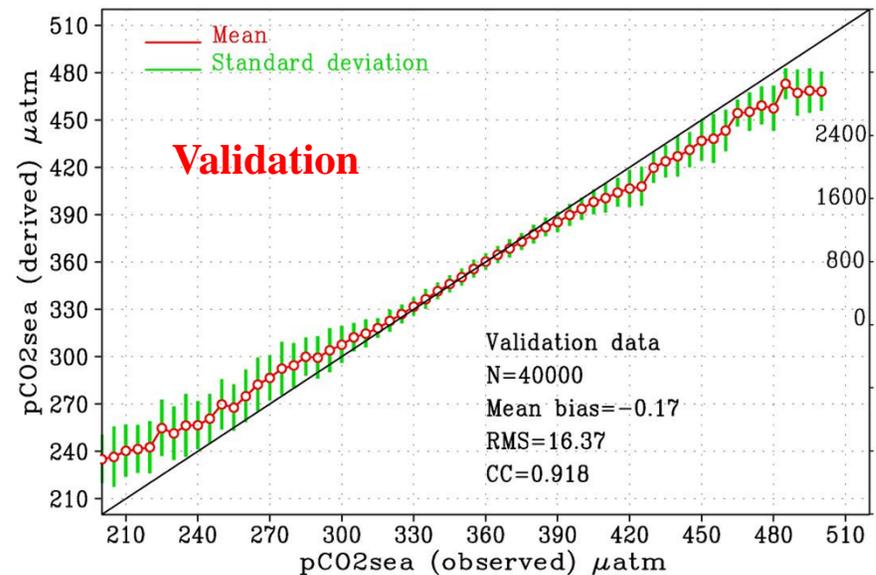

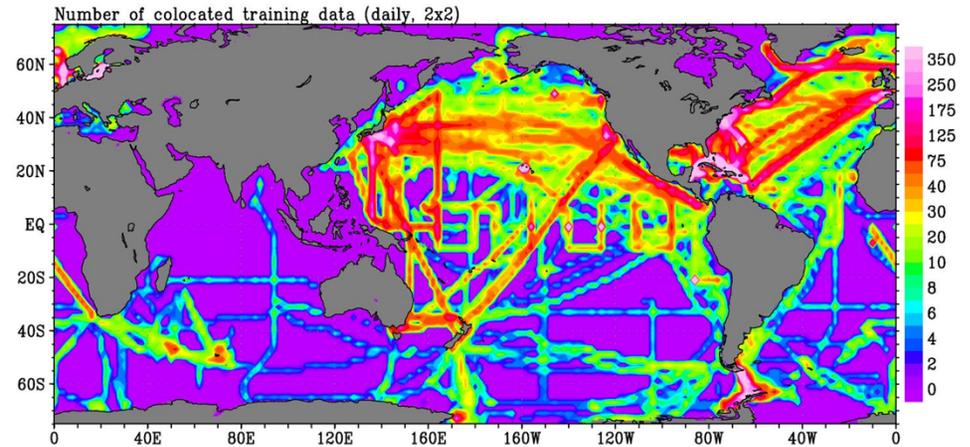

□ 206265 data groups found 2002-2010

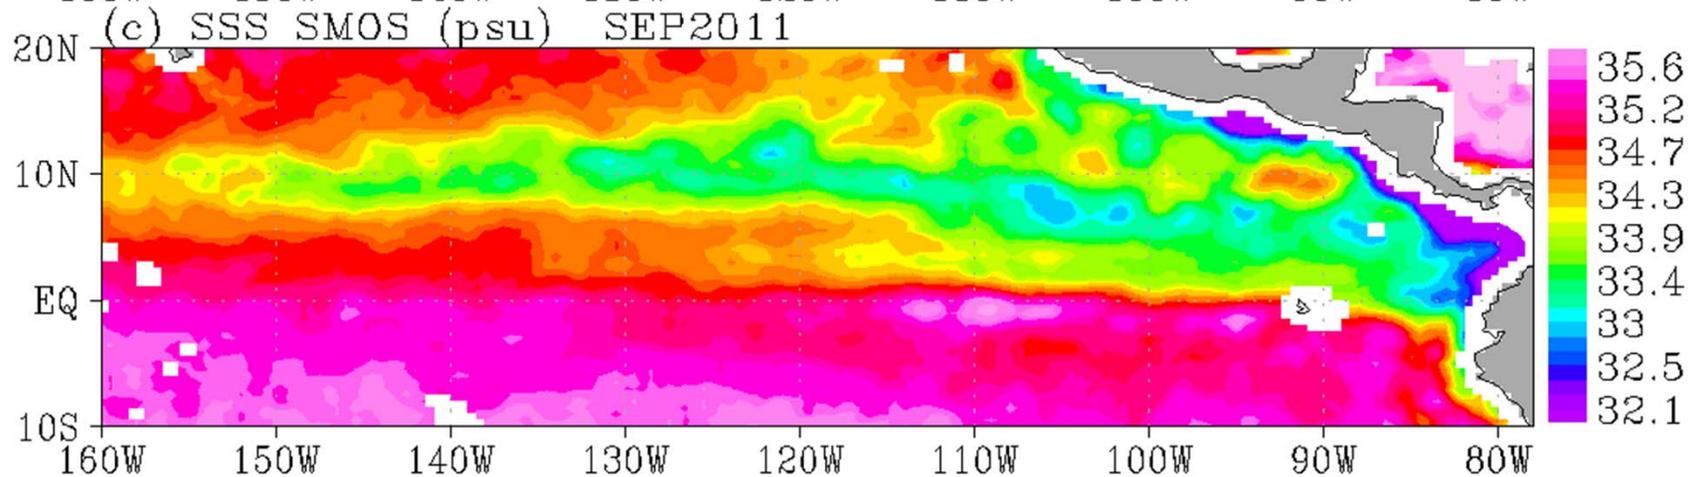

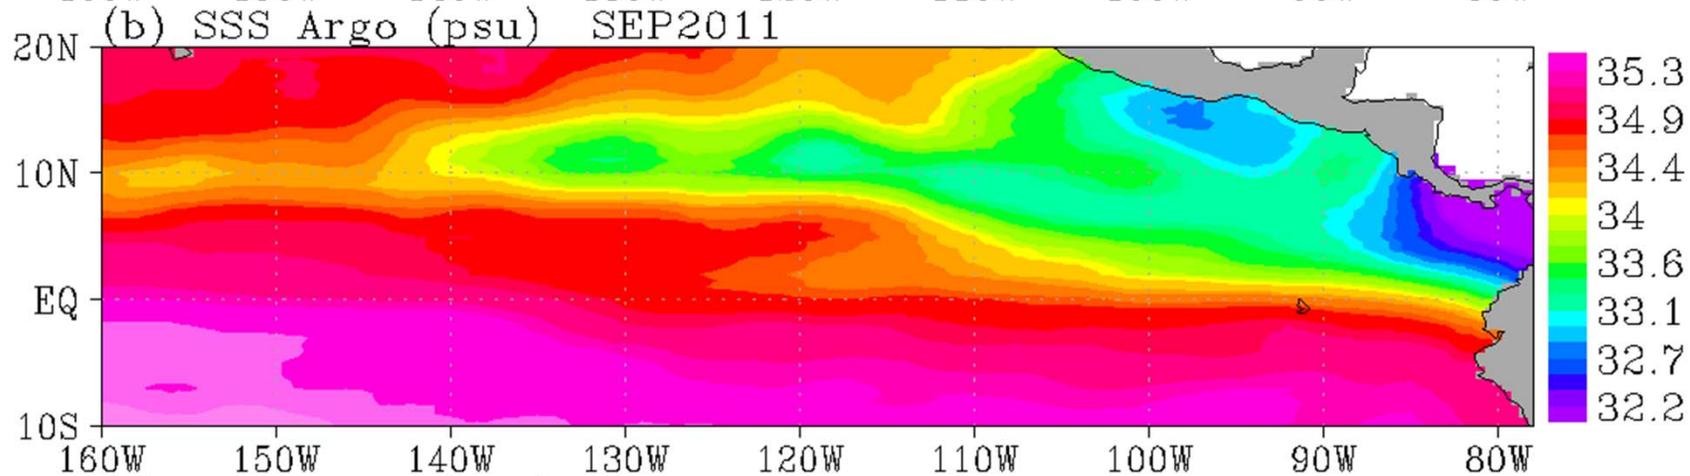

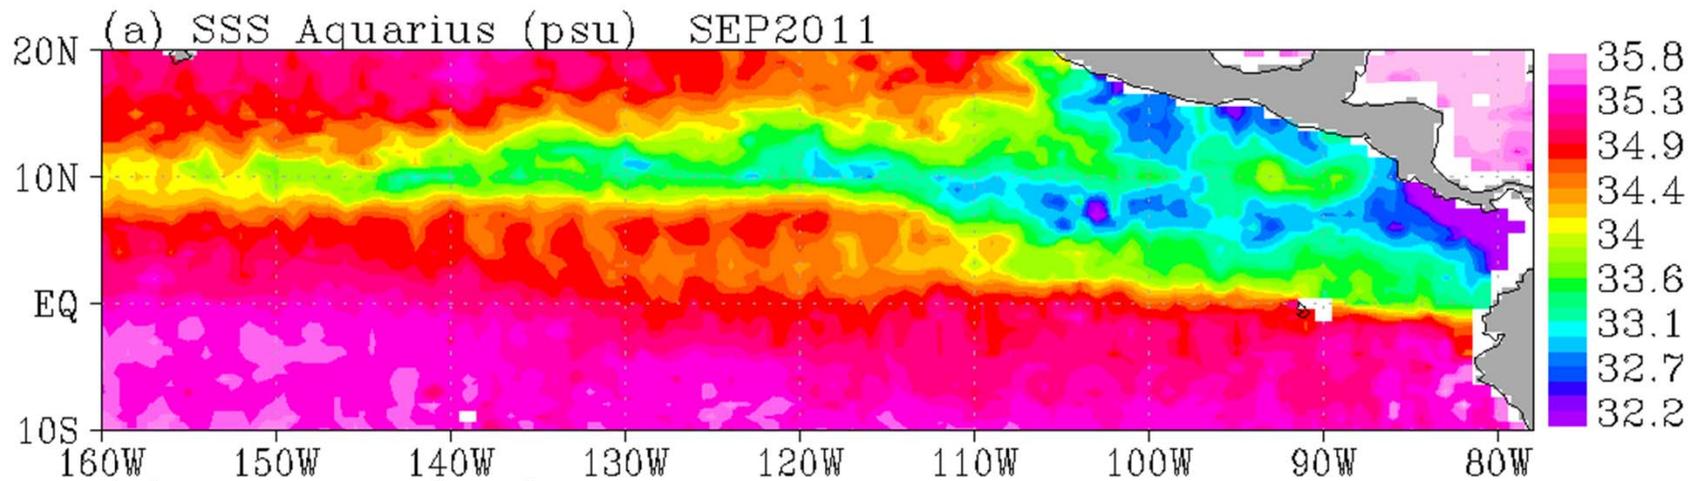

40,000 randomly selected for training and 40,000 for validation

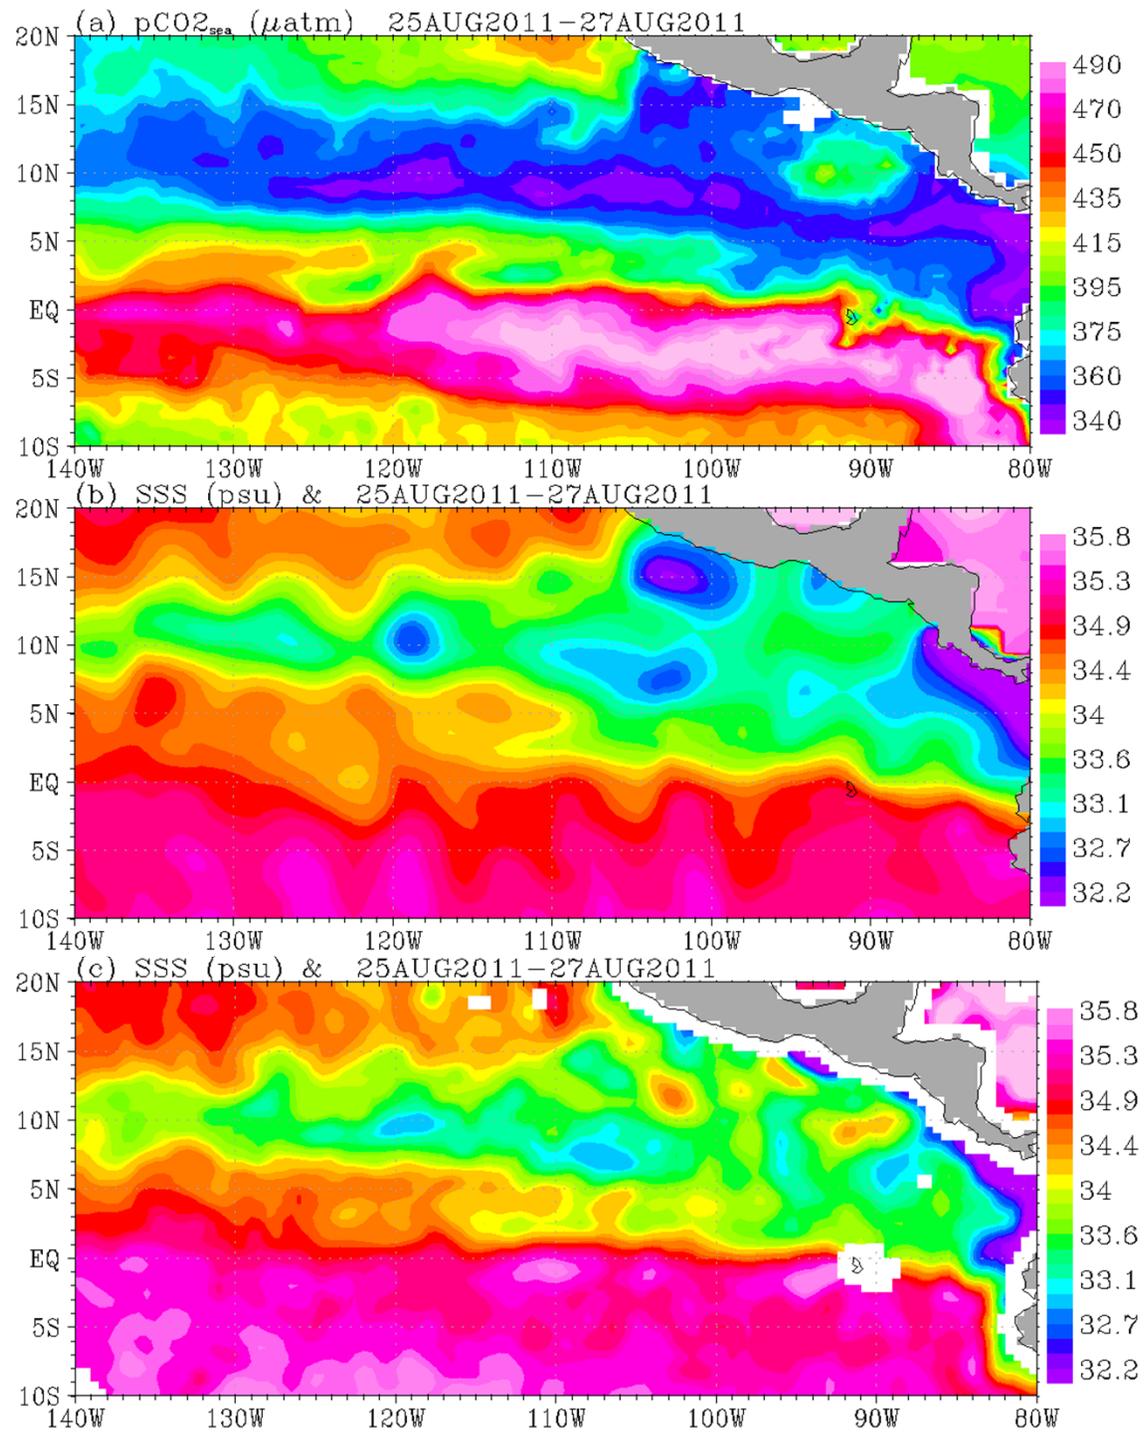

□ Output: 9 year  $p\text{CO}_{2\text{sea}}$  at  $0.5^\circ$ , daily resolution

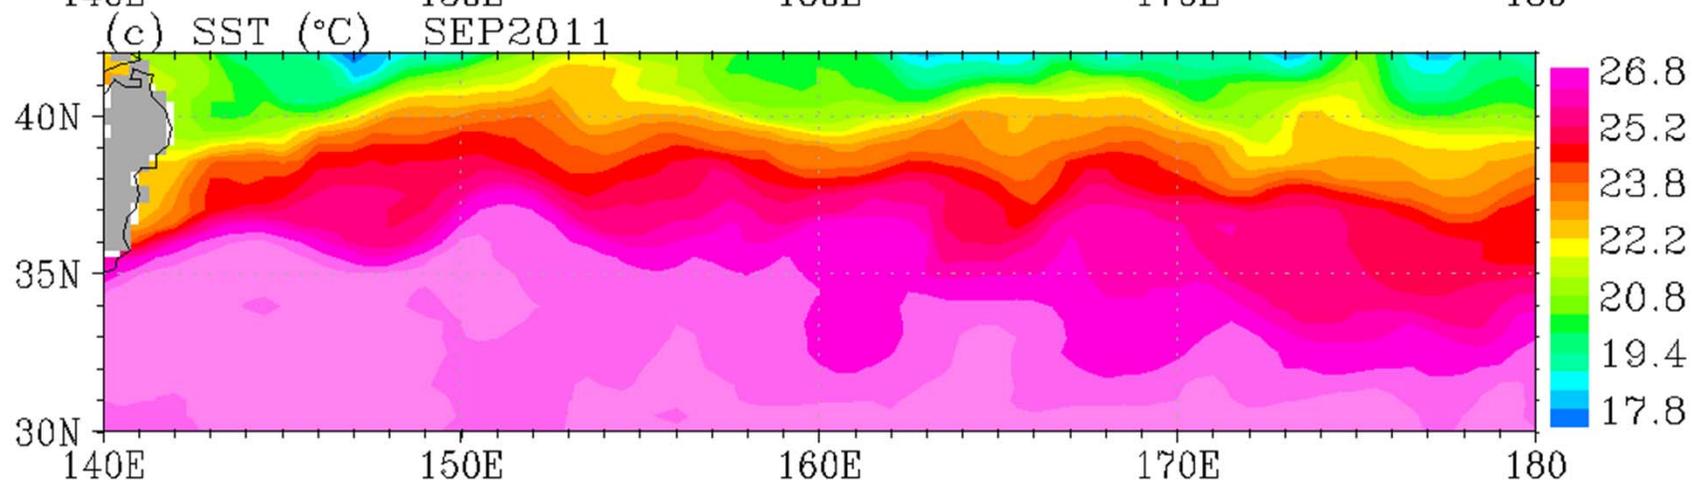

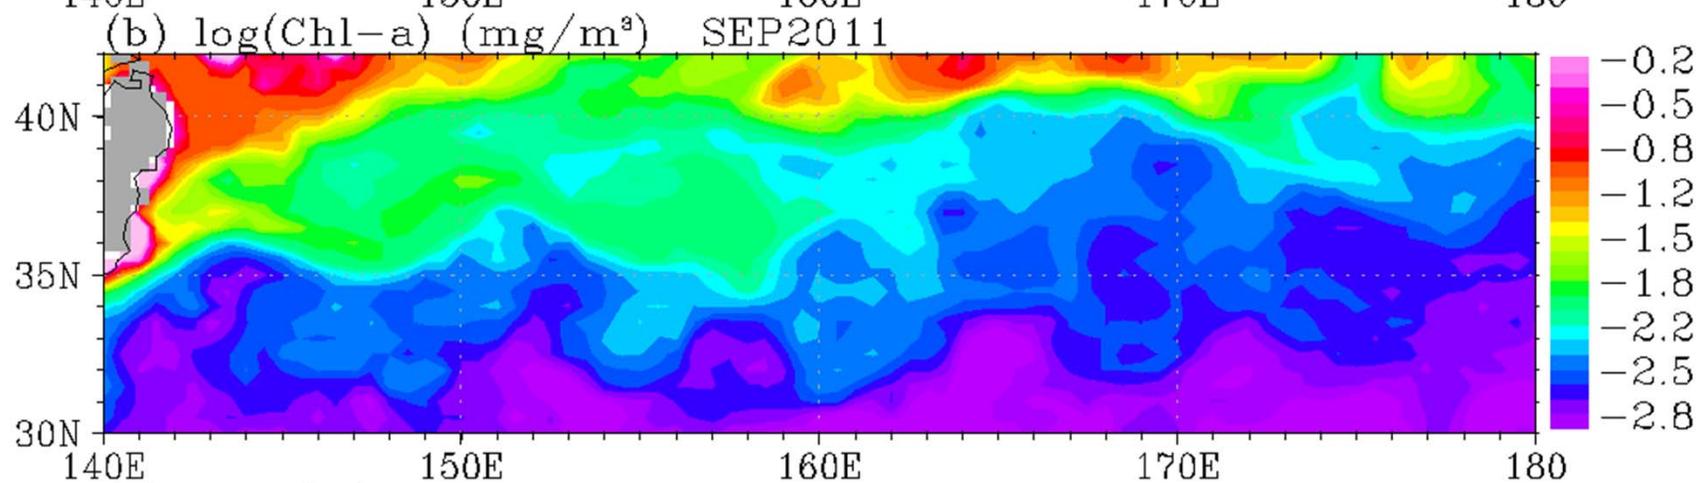

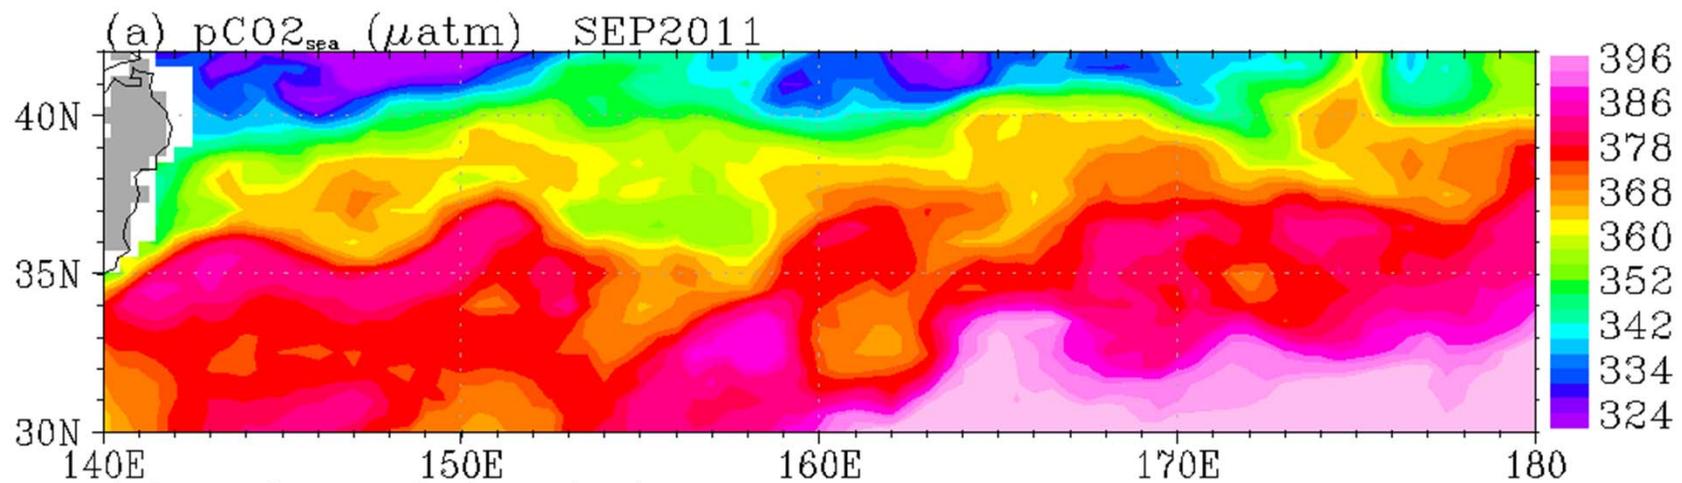

□ RMS (16.4) is 6% of range (270)

Compiled from SOCAT+all other sources through CDIAC, with collocation with satellite data

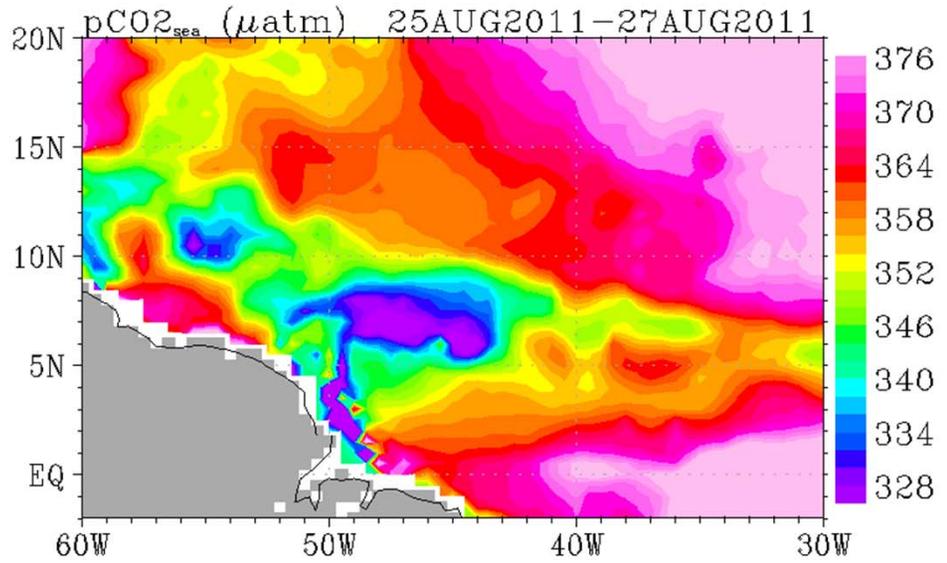

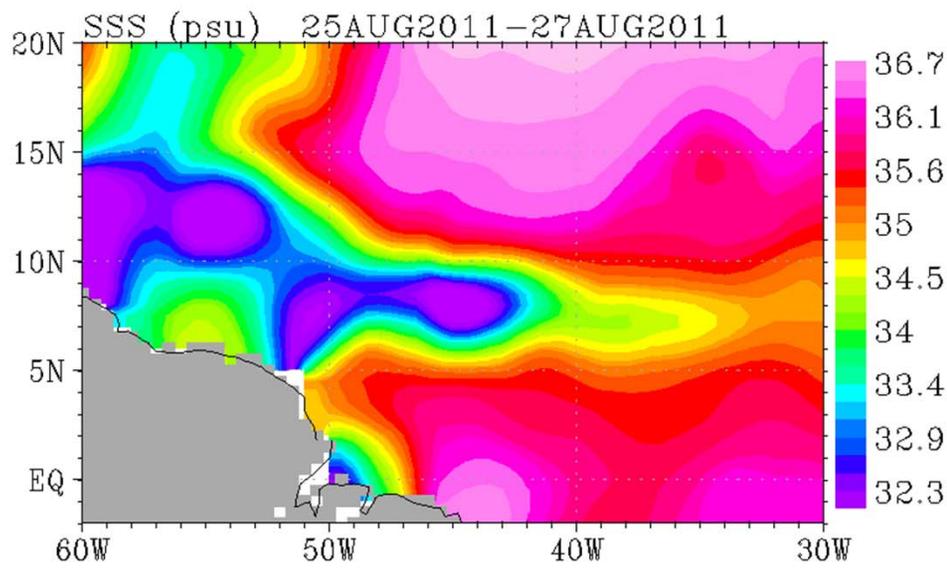

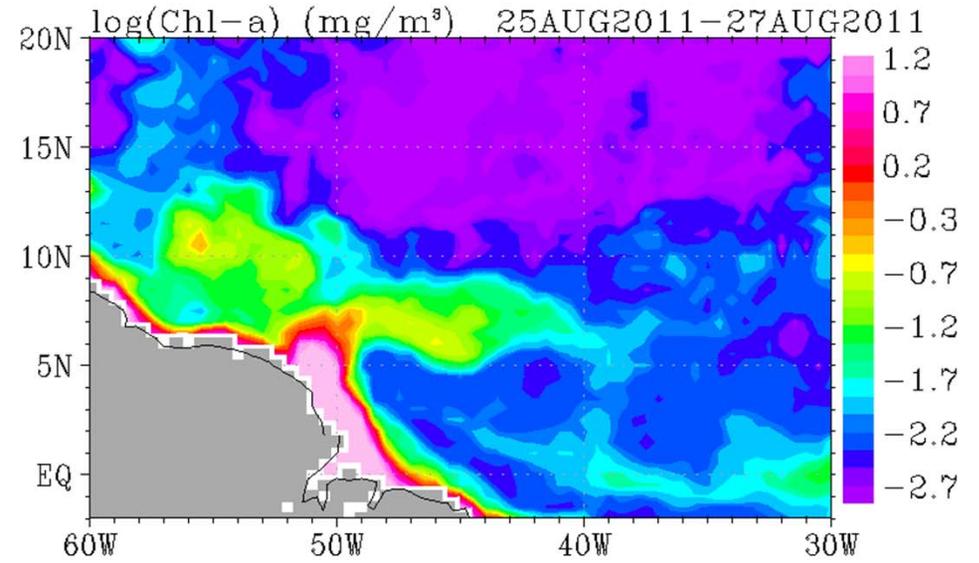

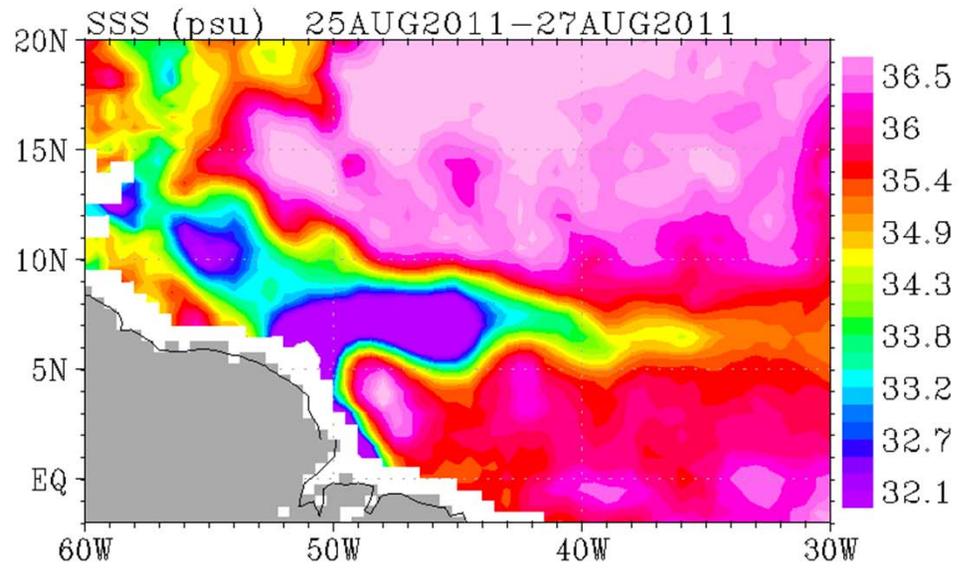

### pCO2sea

### log(Chl-a)

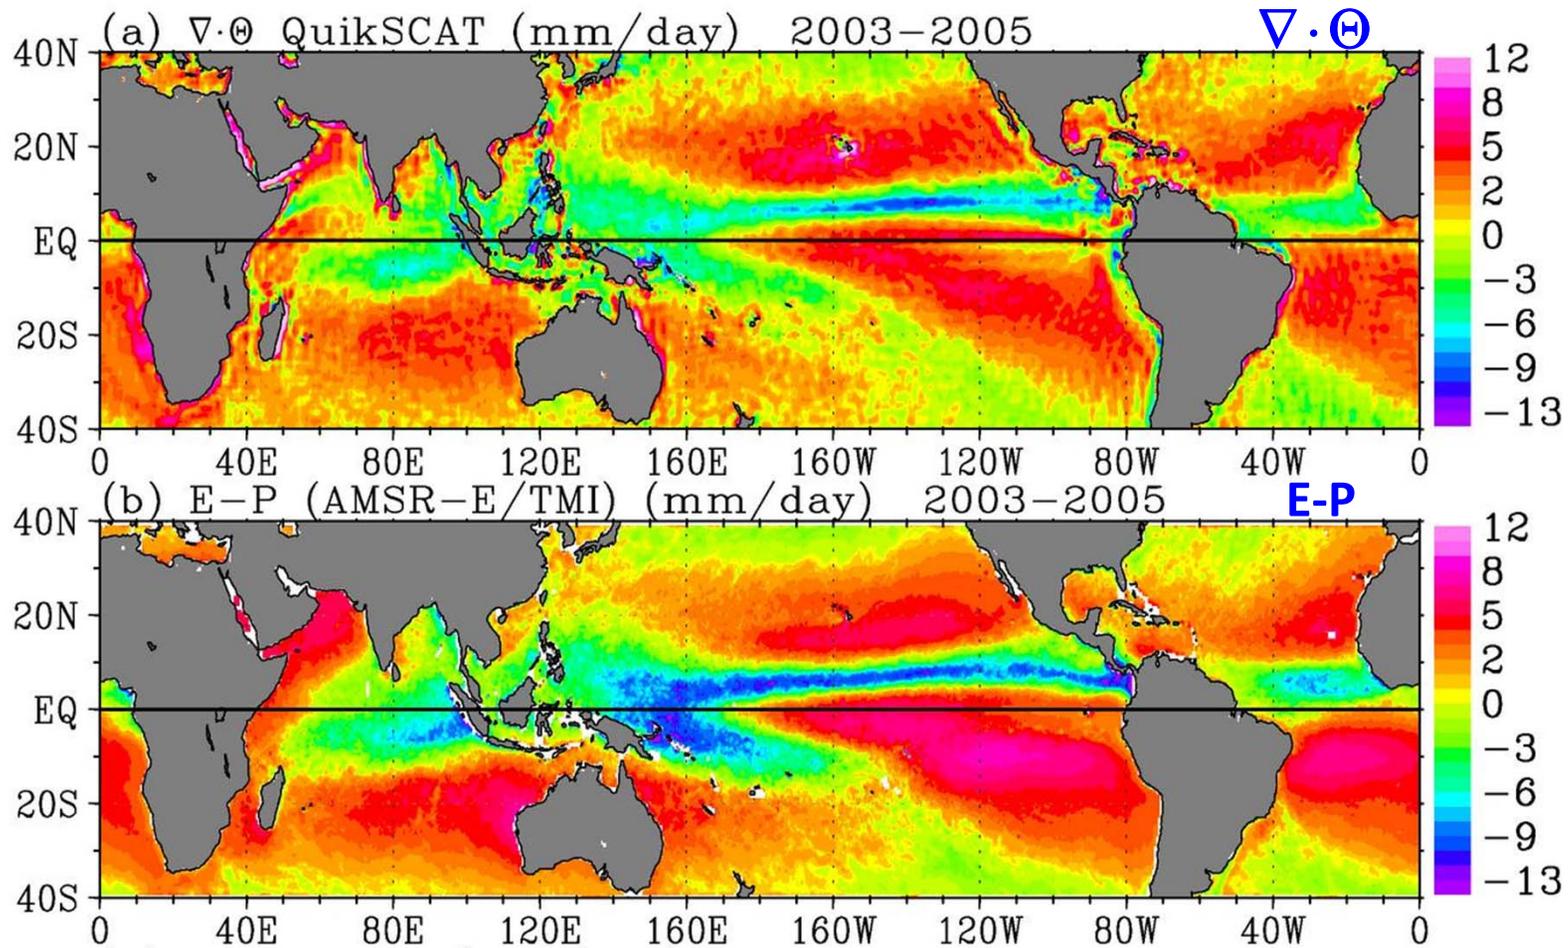

### SSS (Aquarius)

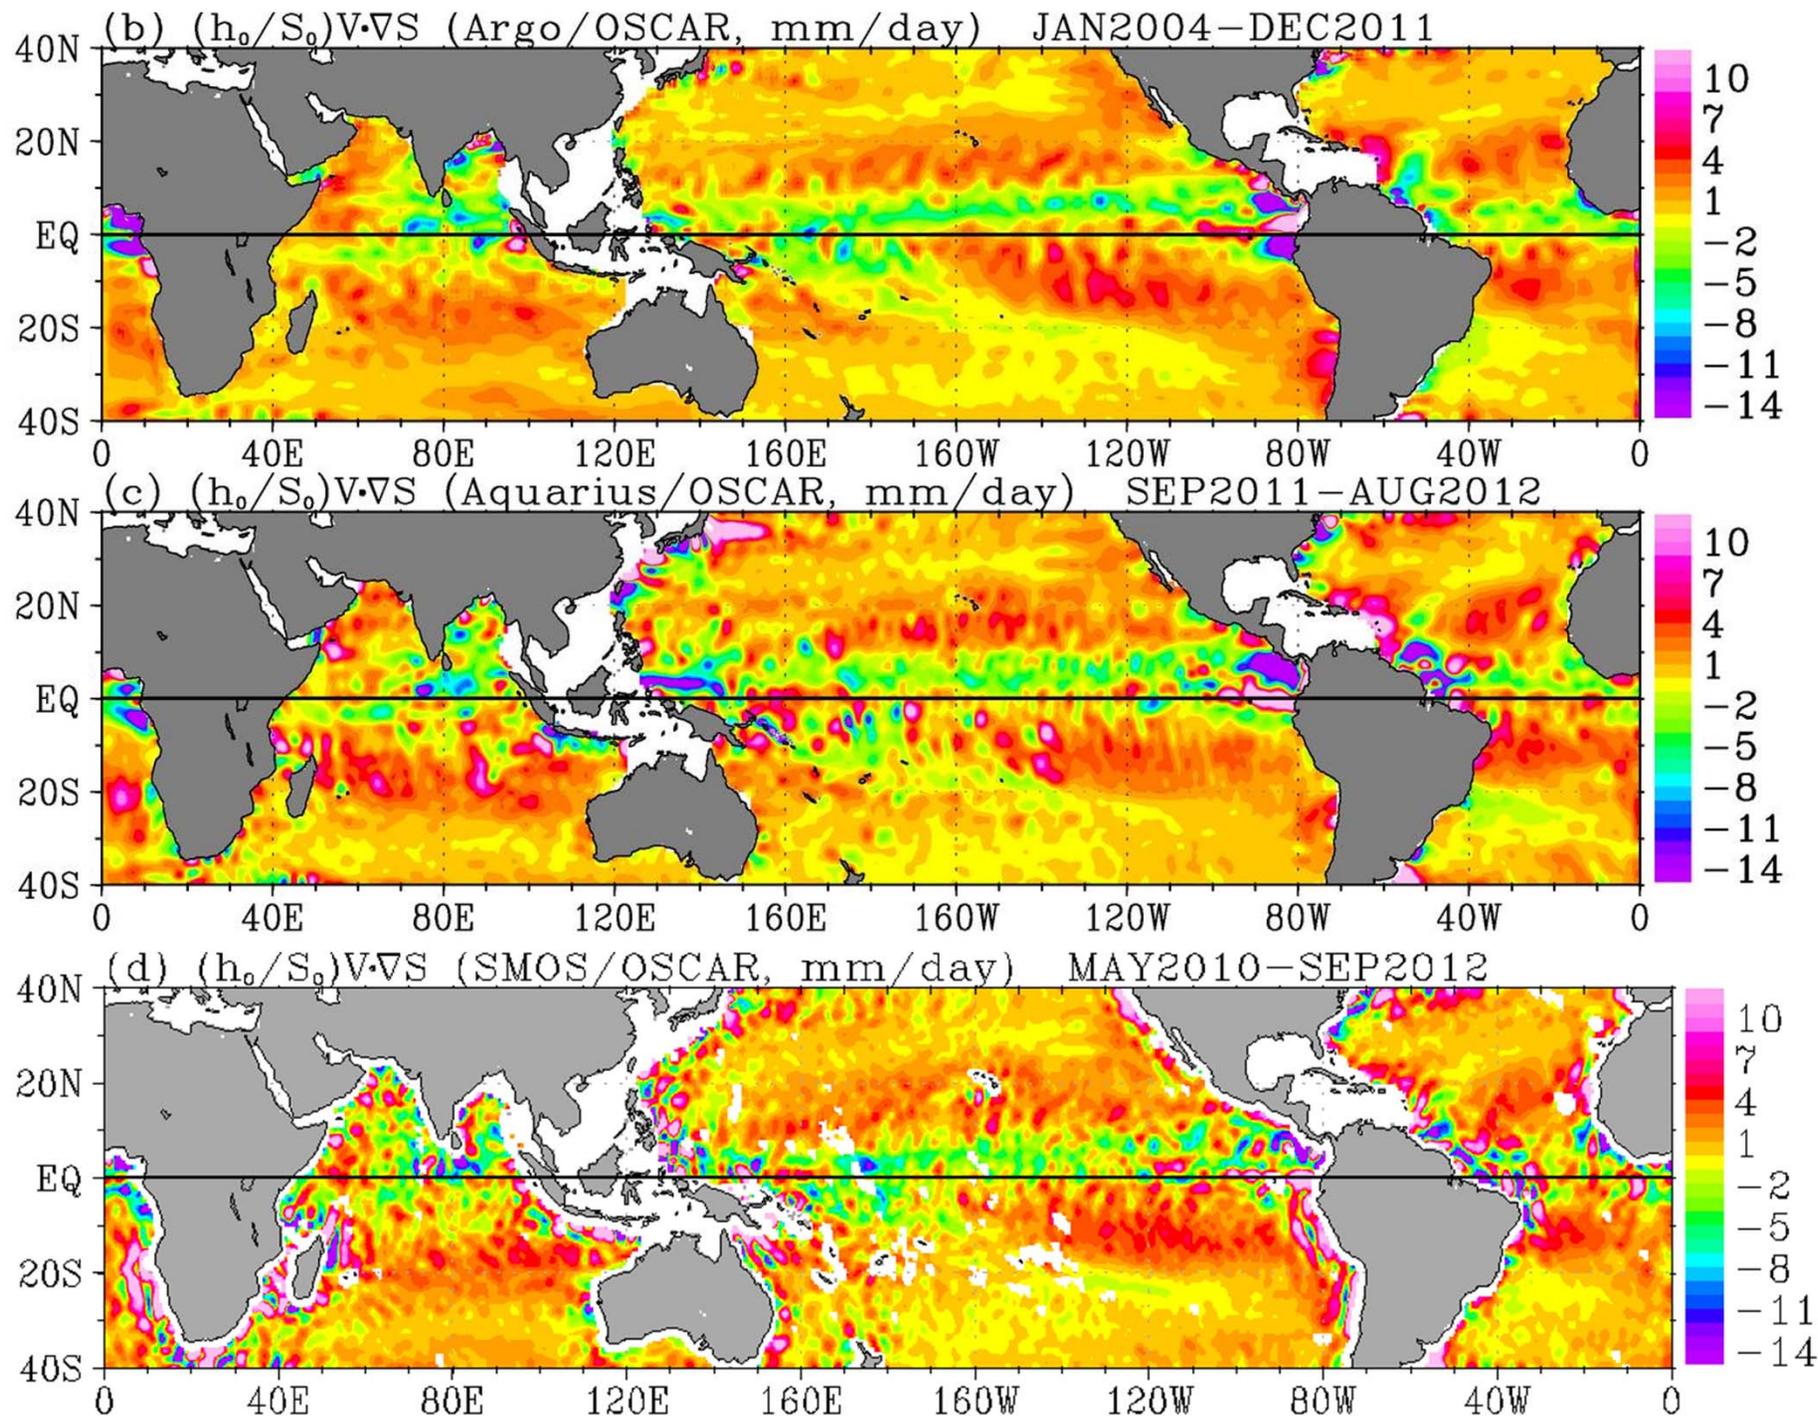

### SSS (SMOS)

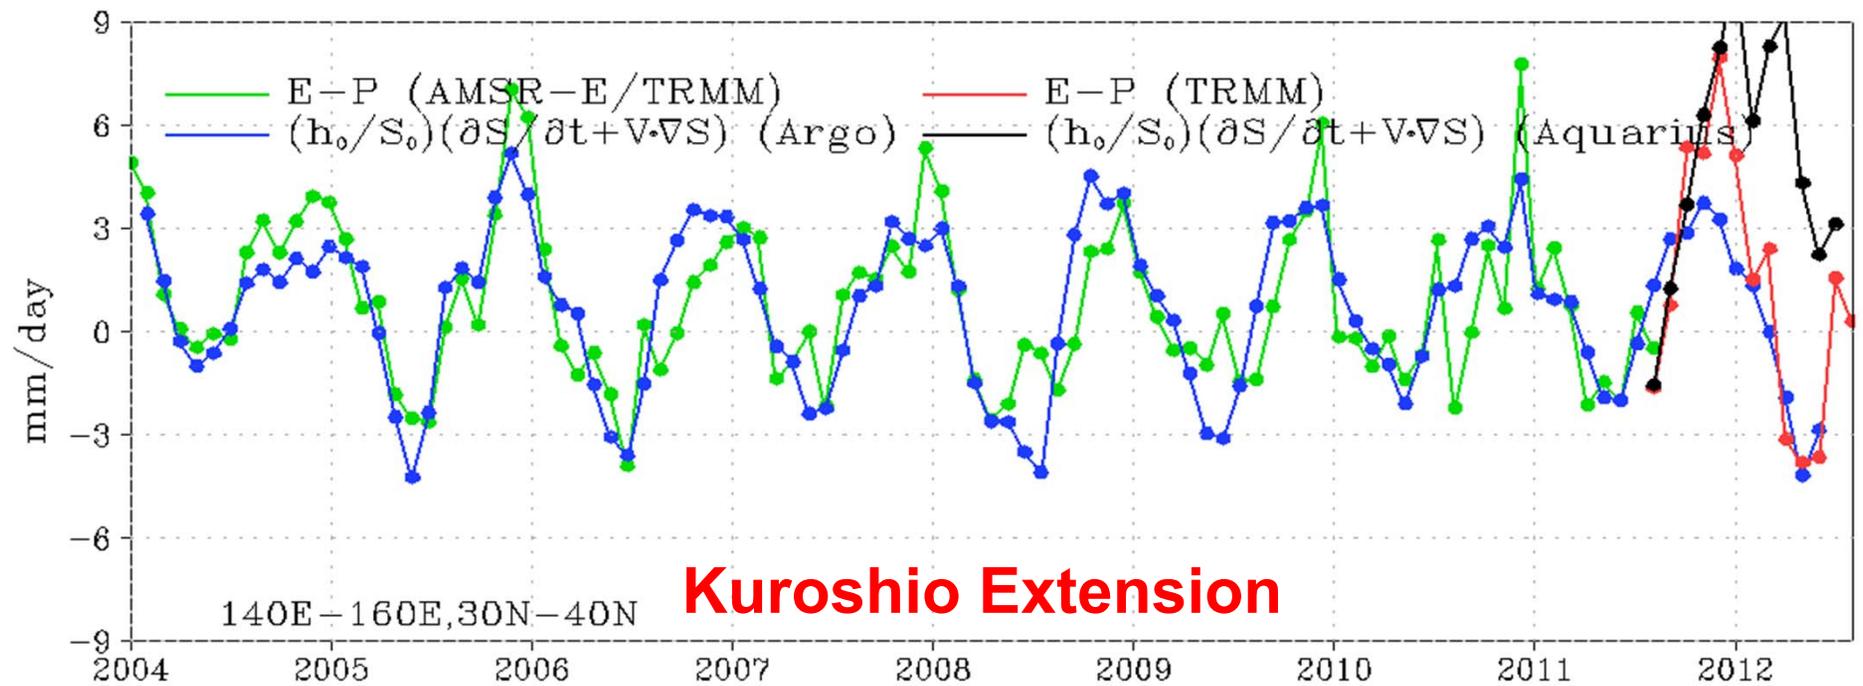

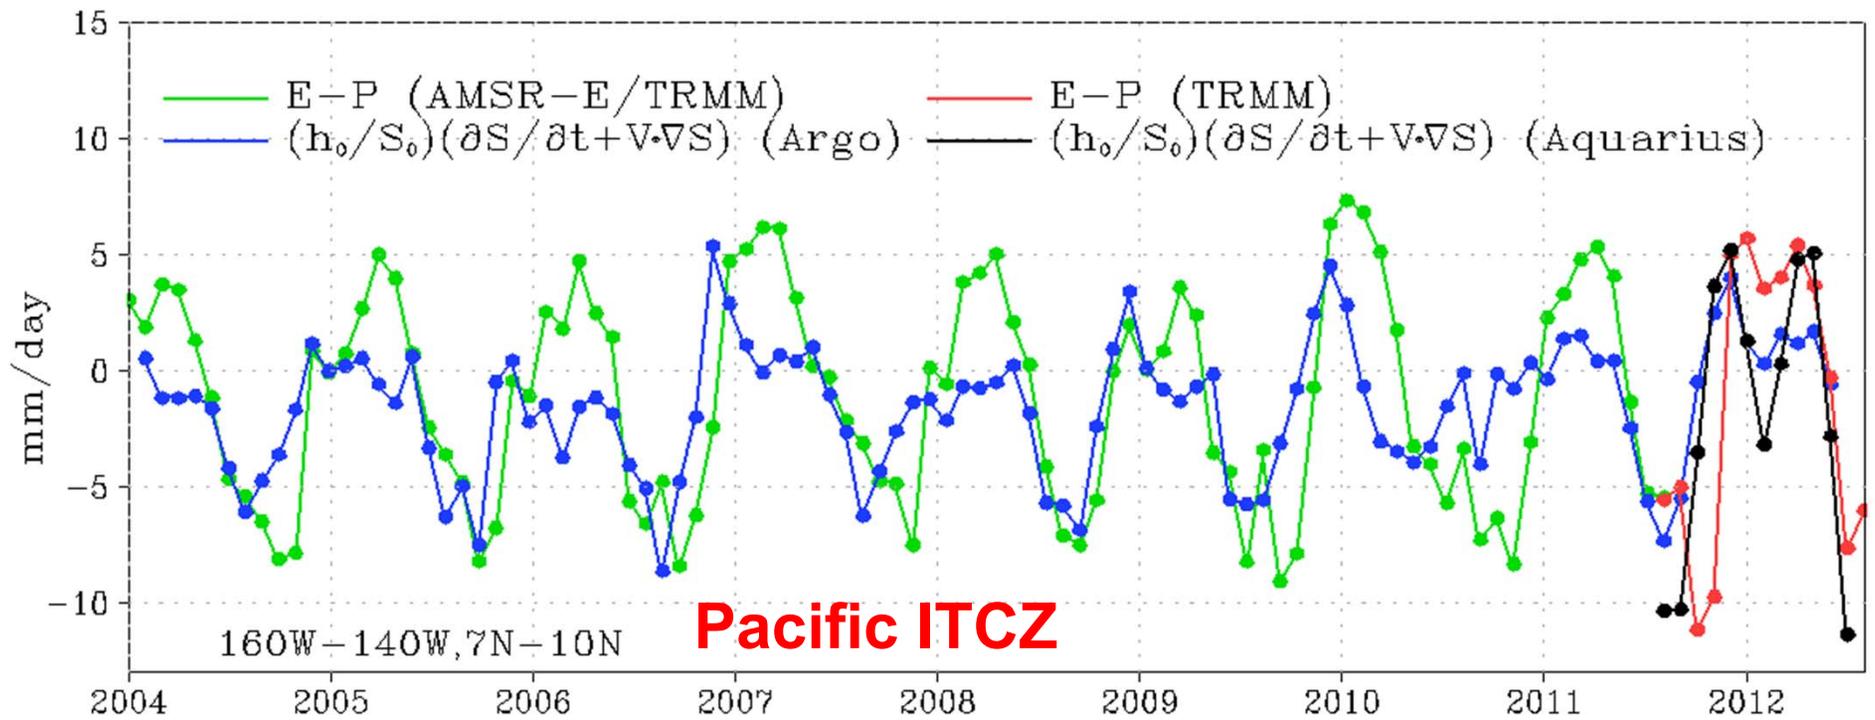

$$E - P = \frac{h_0}{S_0} \left( \frac{\partial S}{\partial t} + \mathbf{V} \cdot \nabla S \right)$$

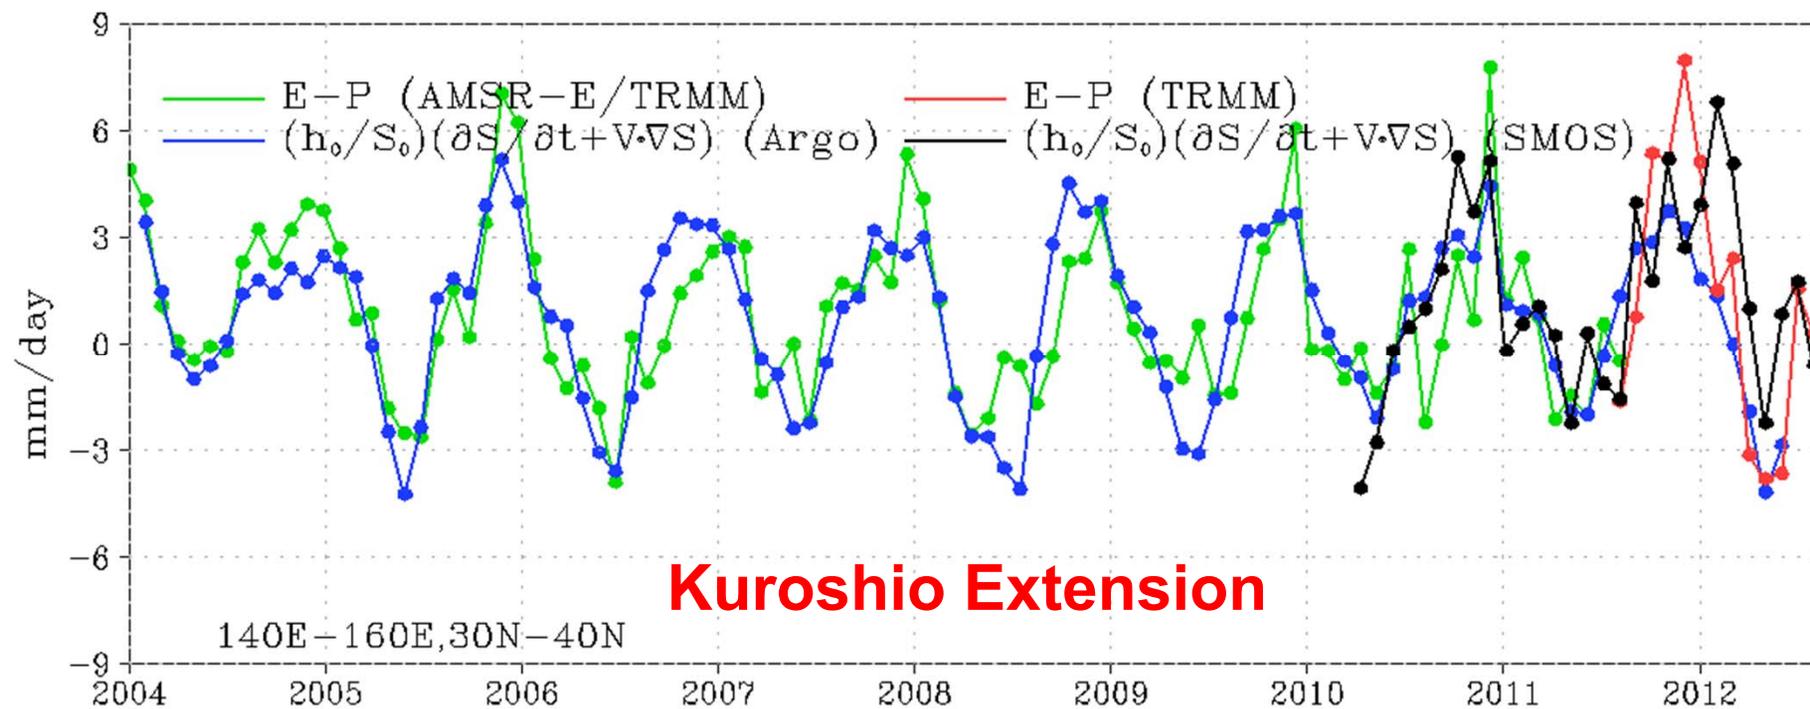

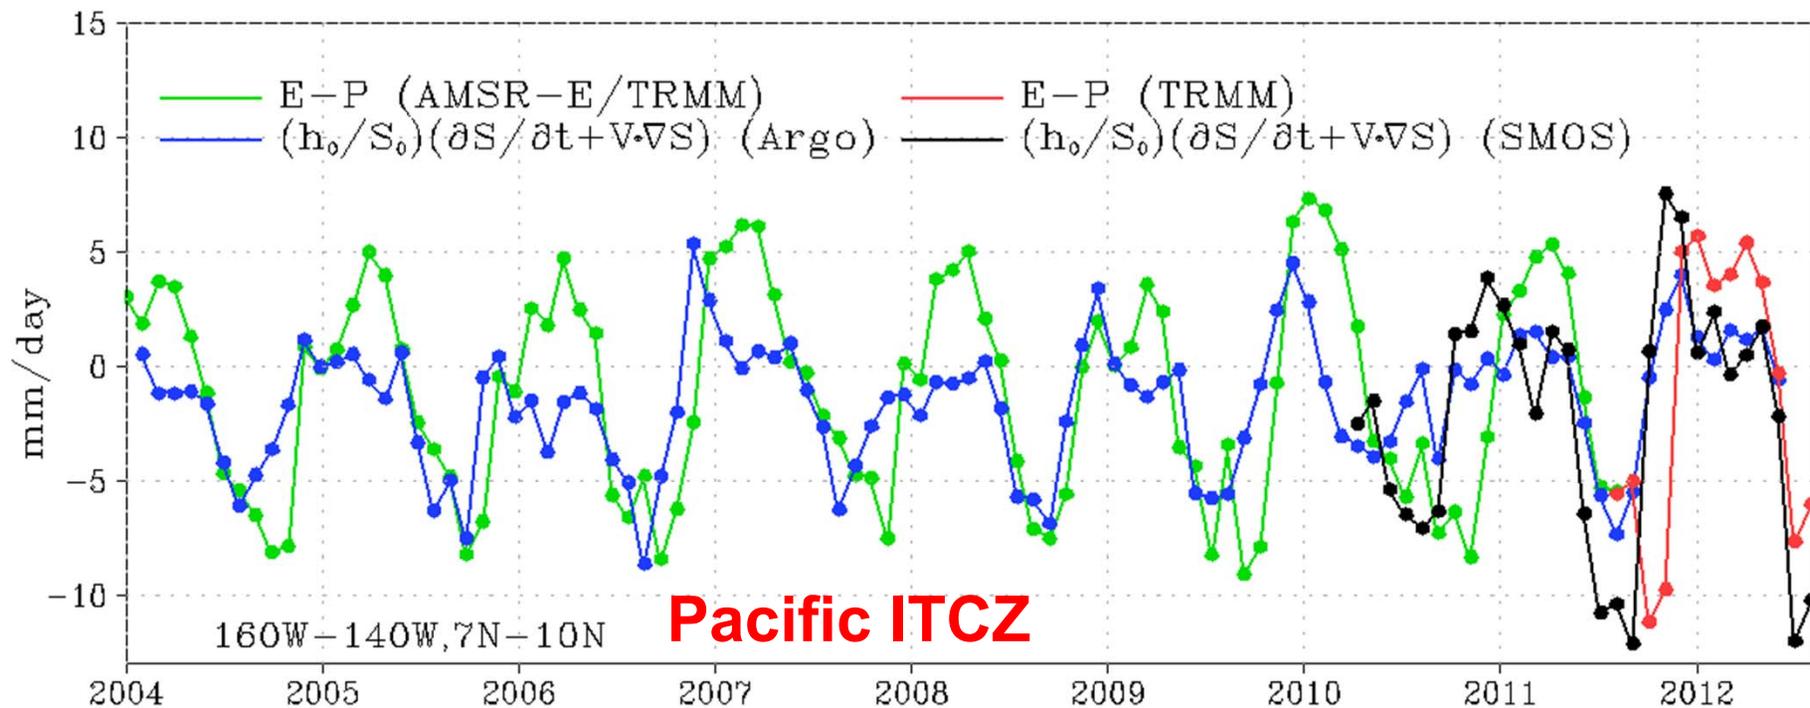

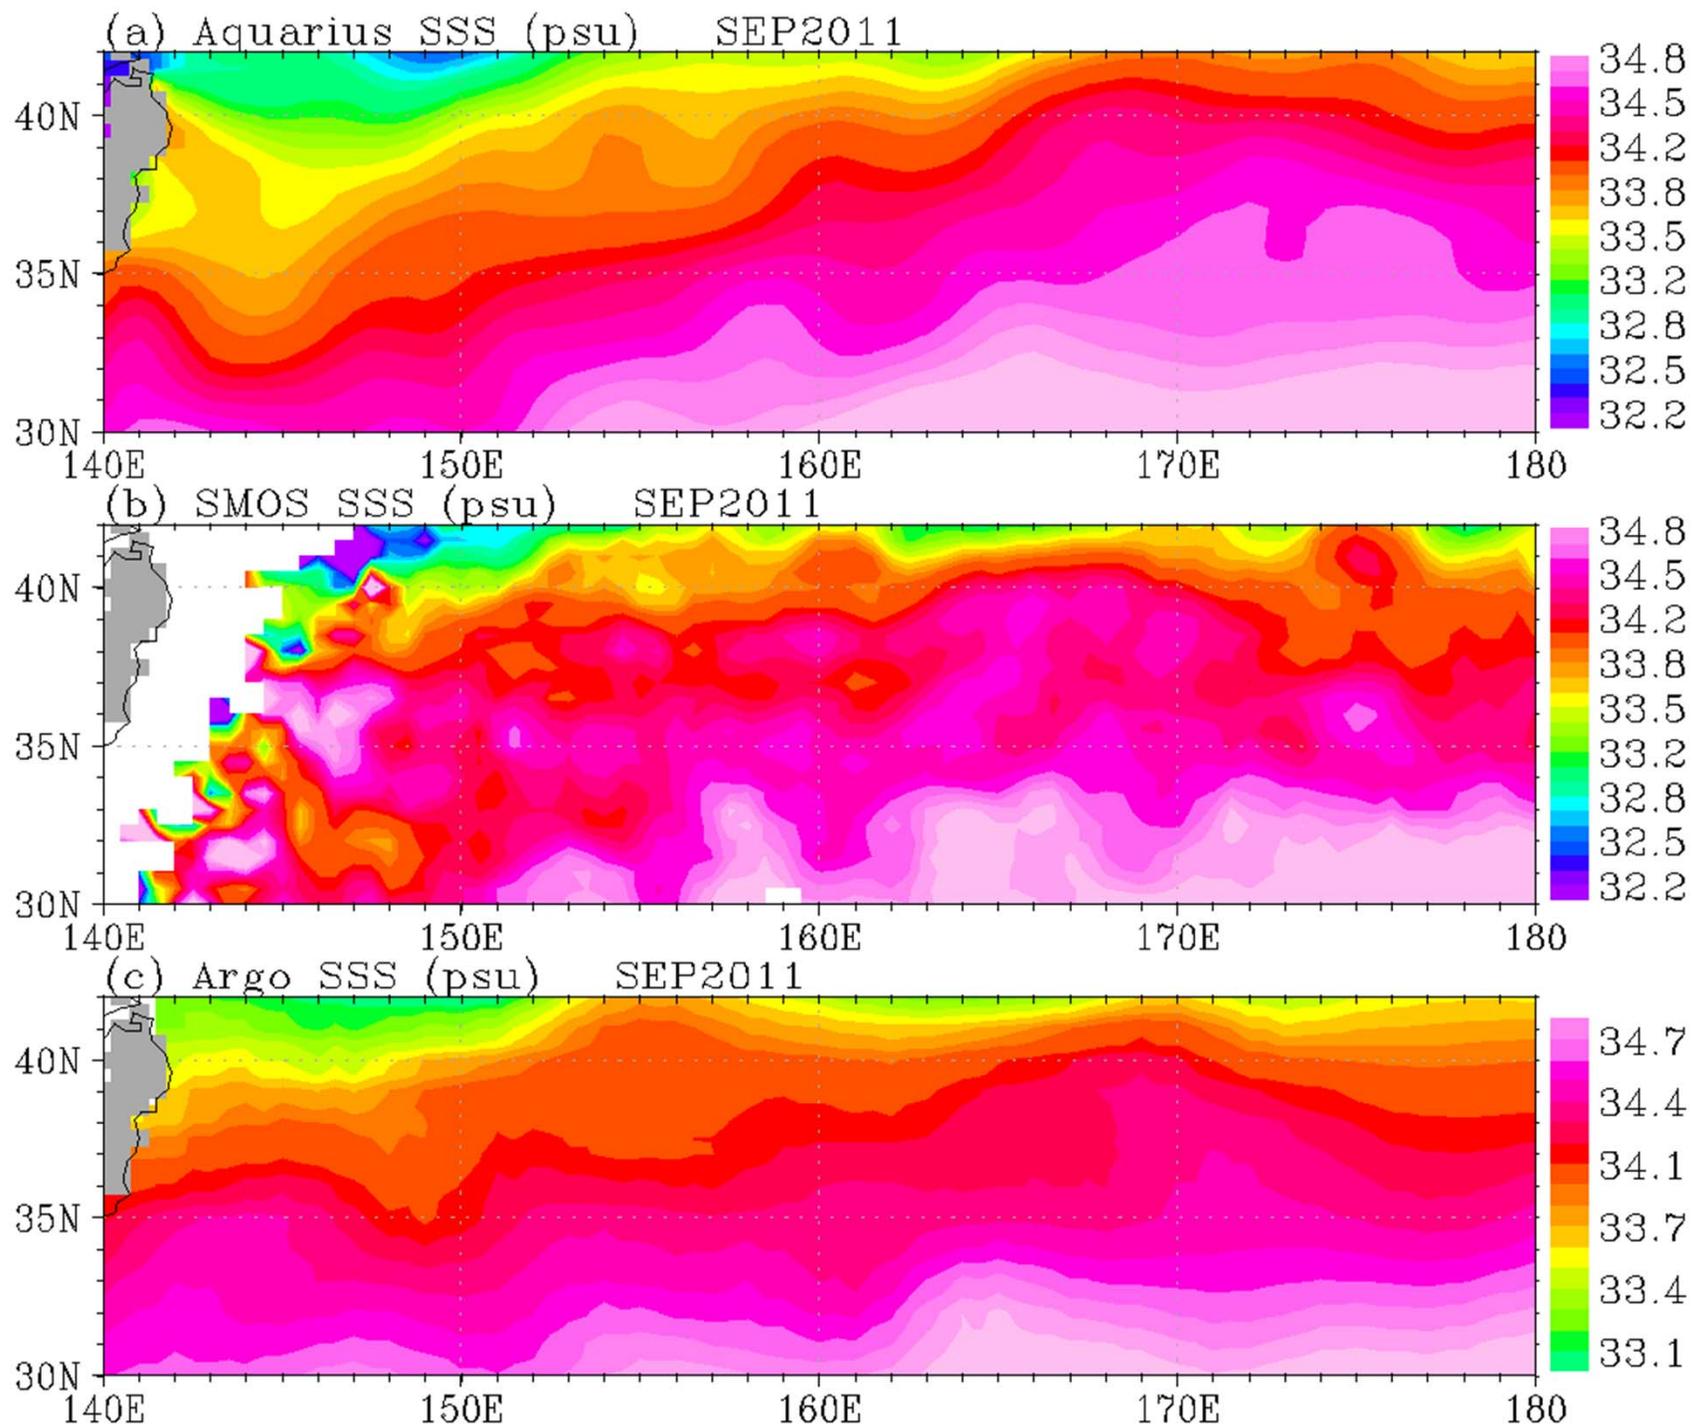

$$\frac{\partial W}{\partial t} + \nabla \cdot \Theta = E - P$$

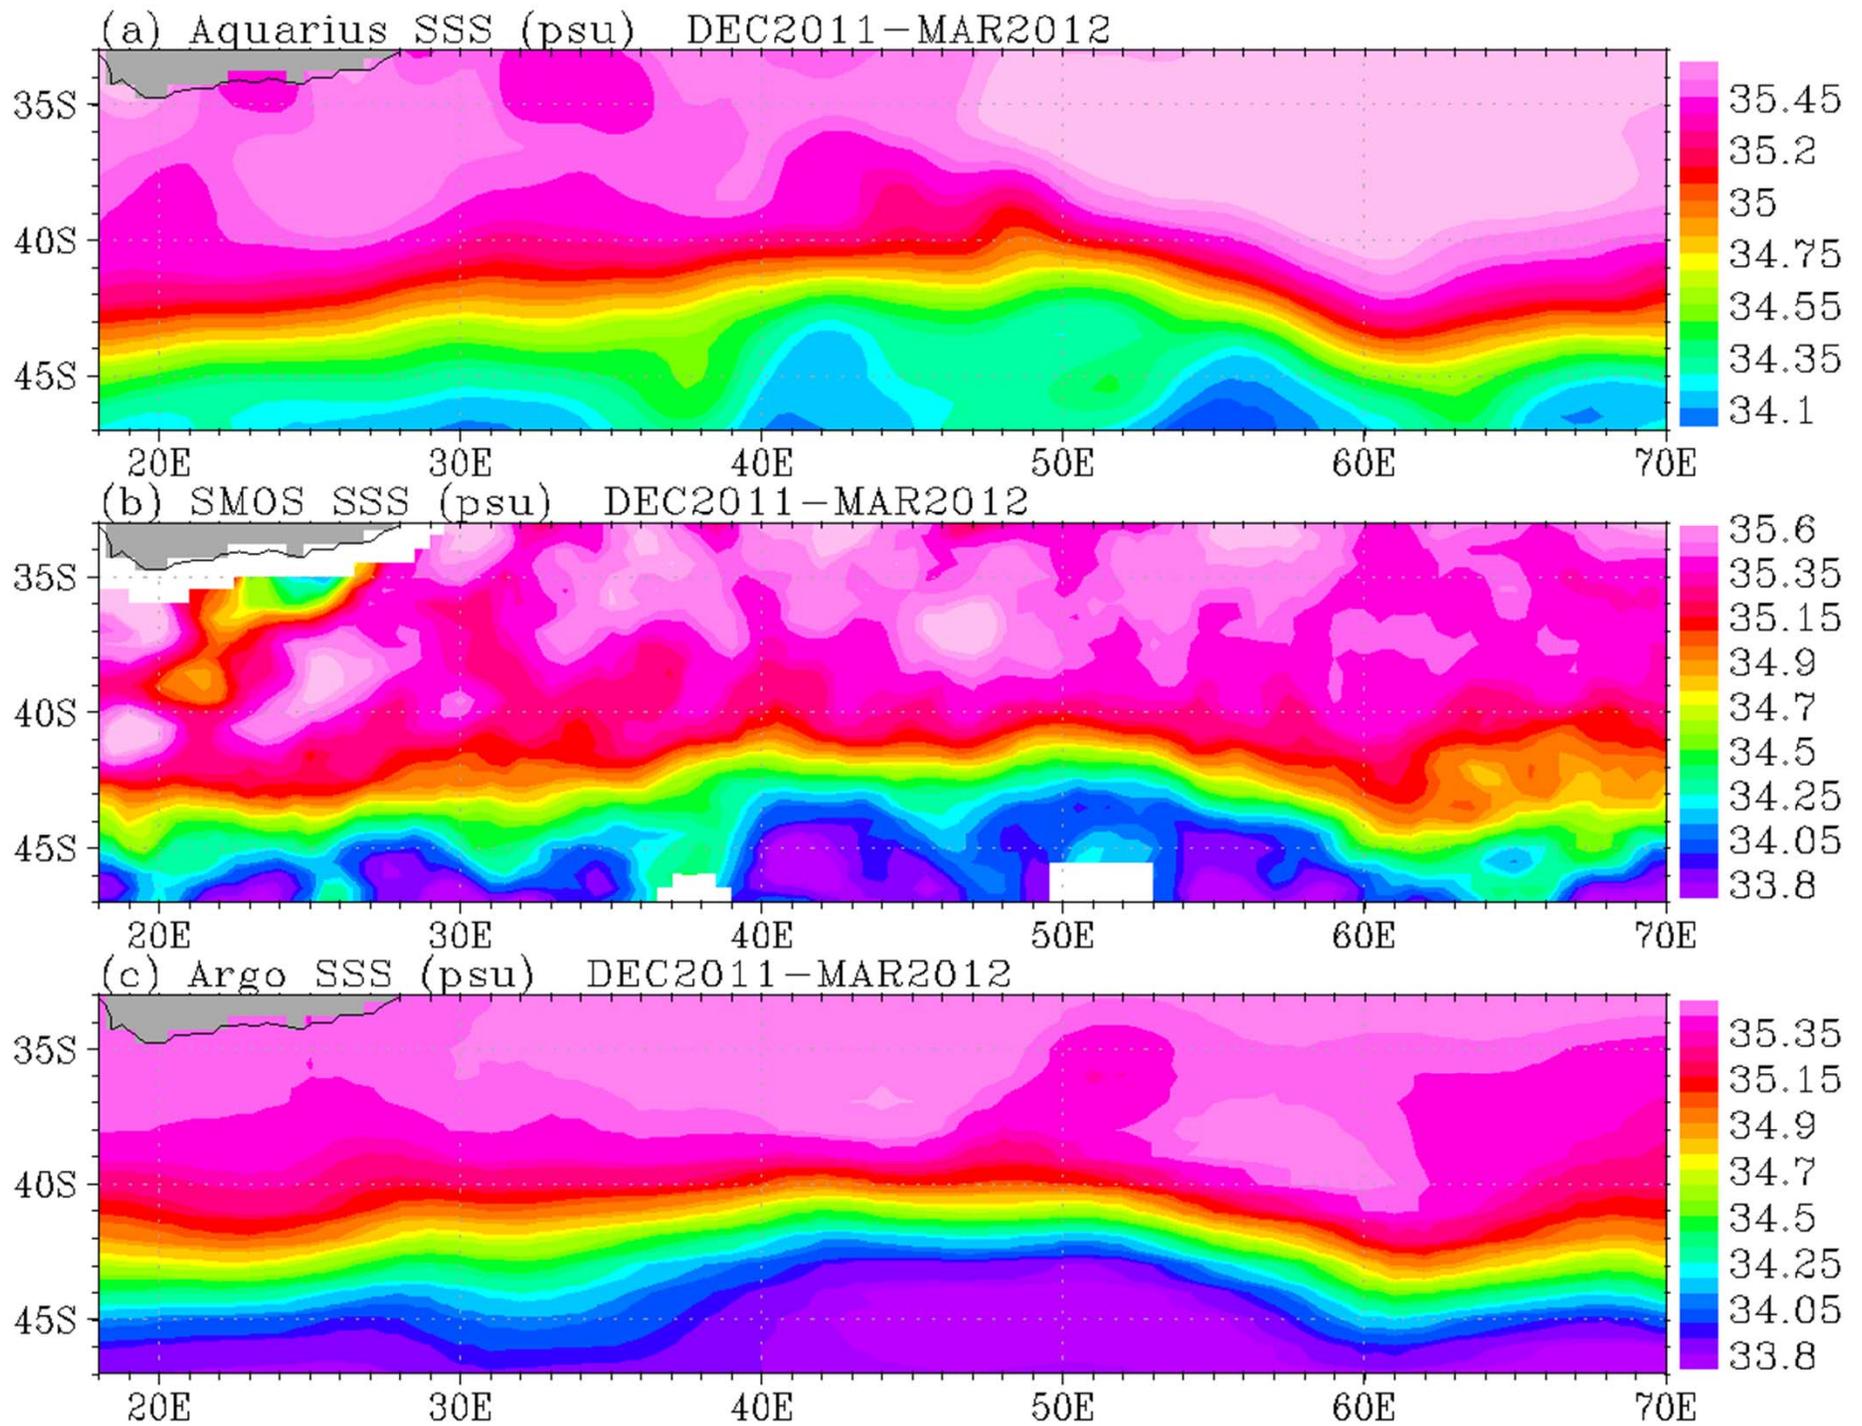

$$\Theta = \frac{1}{g} \int_0^{p_0} q U dp \quad W = \frac{1}{g} \int_0^{p_0} q dp$$

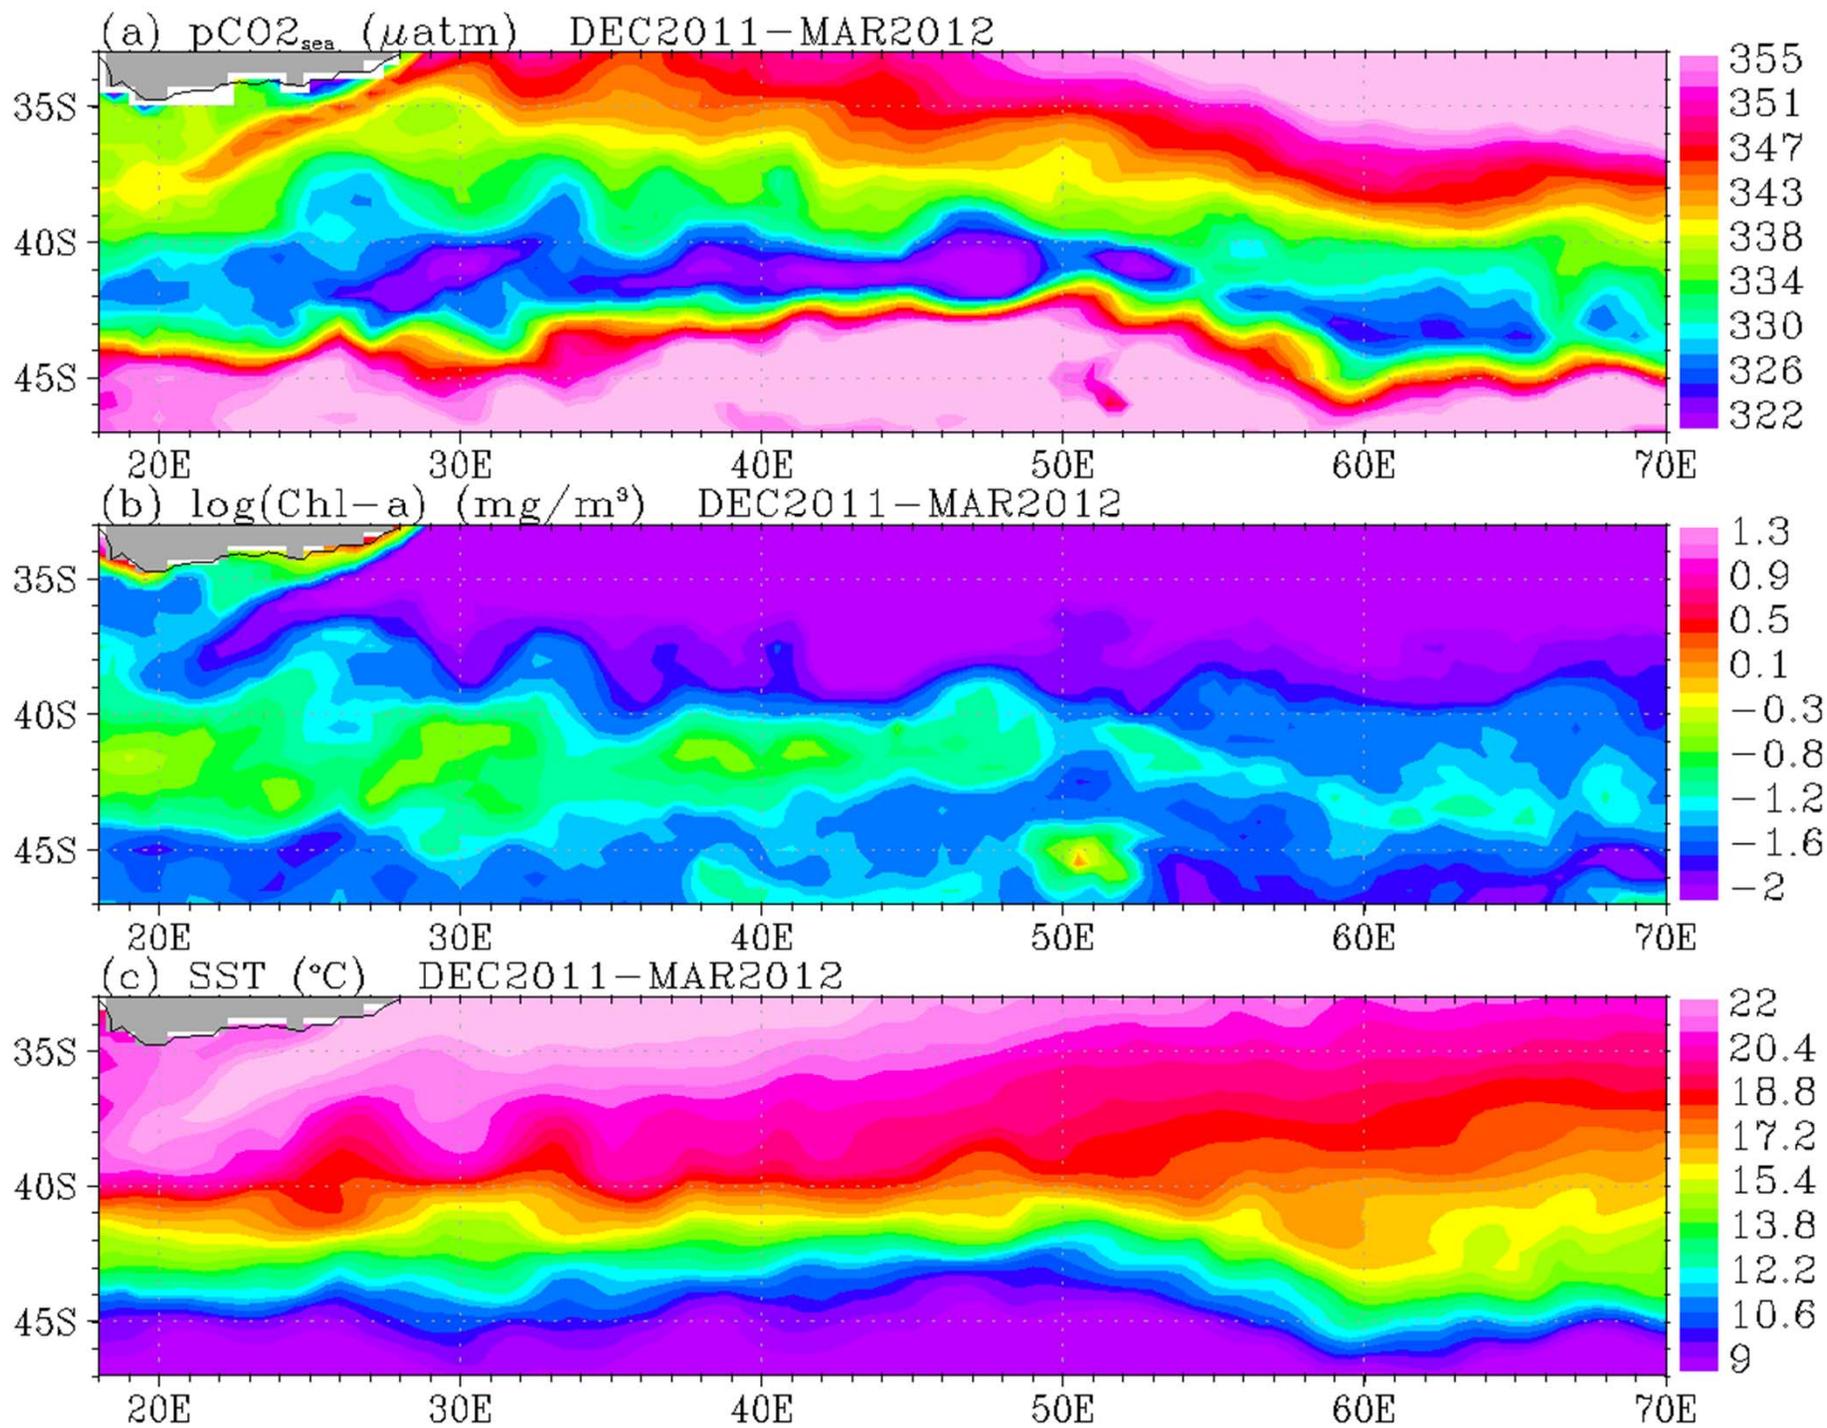

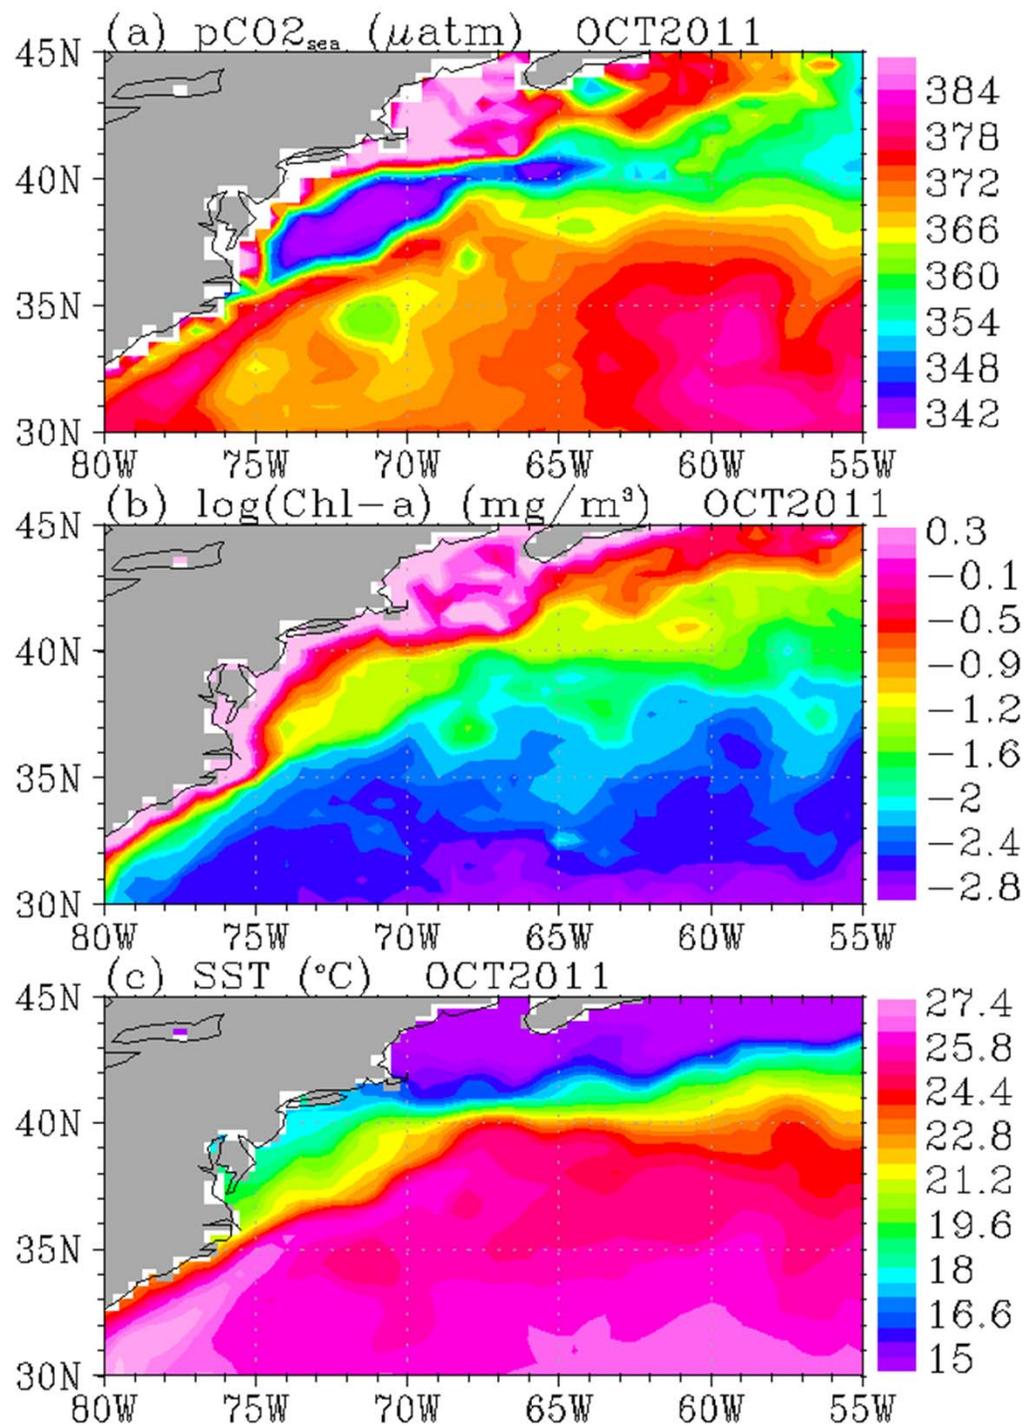

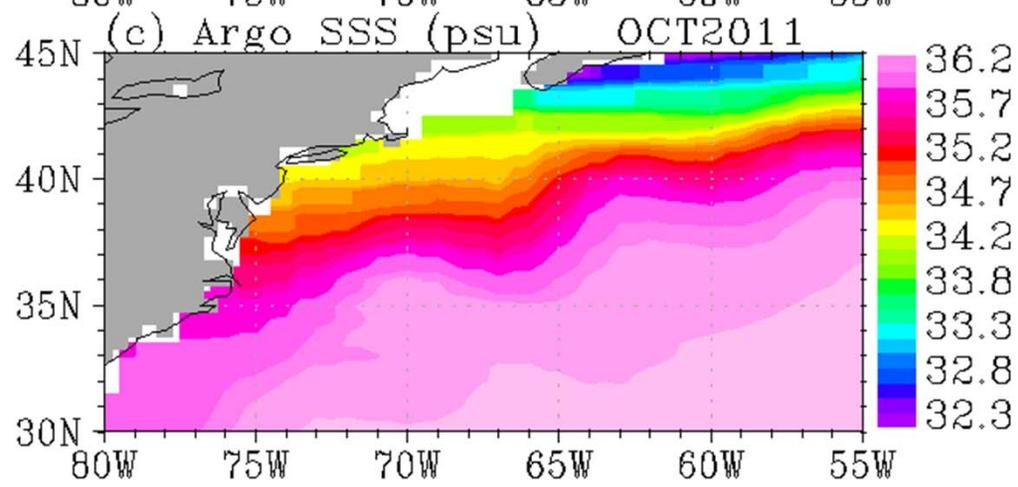

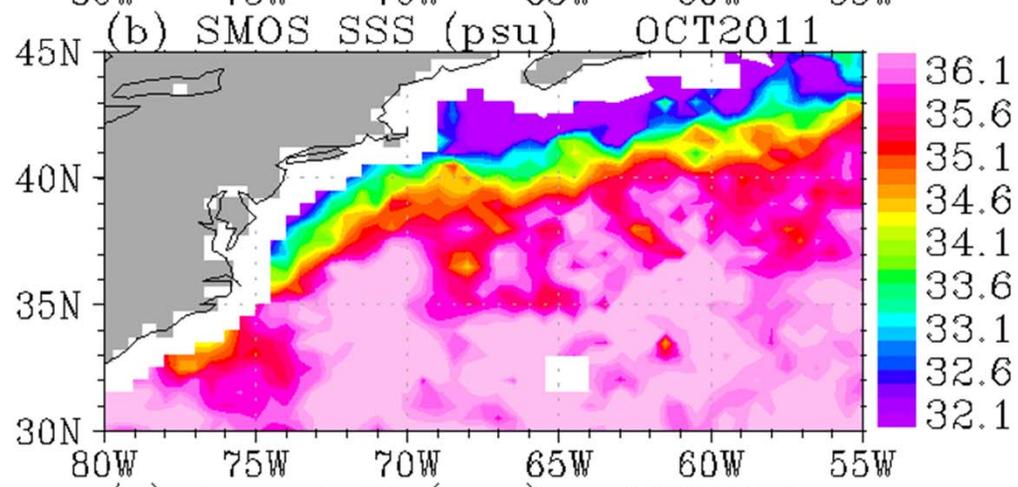

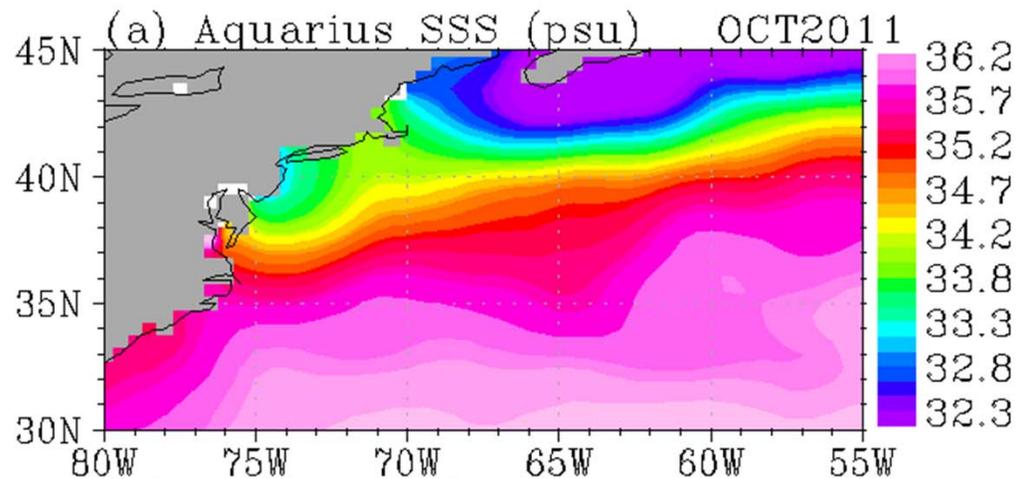

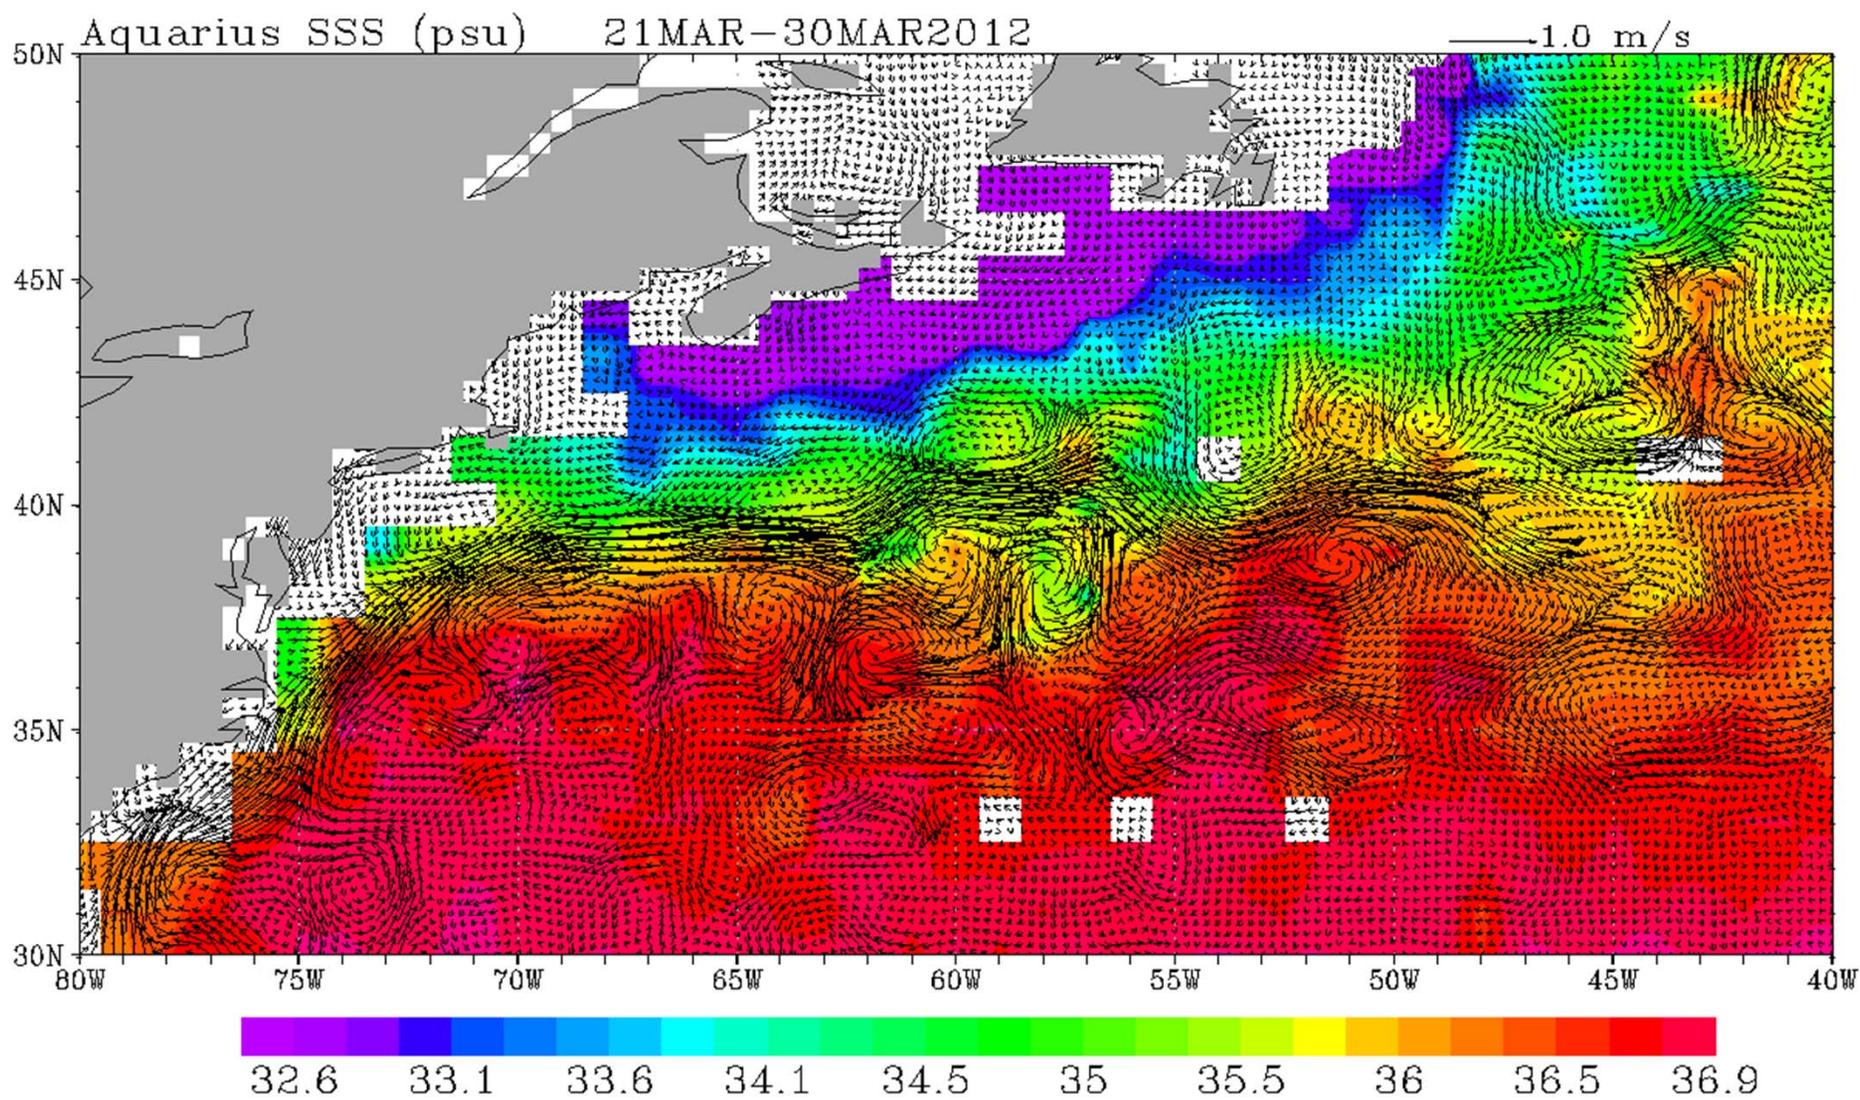

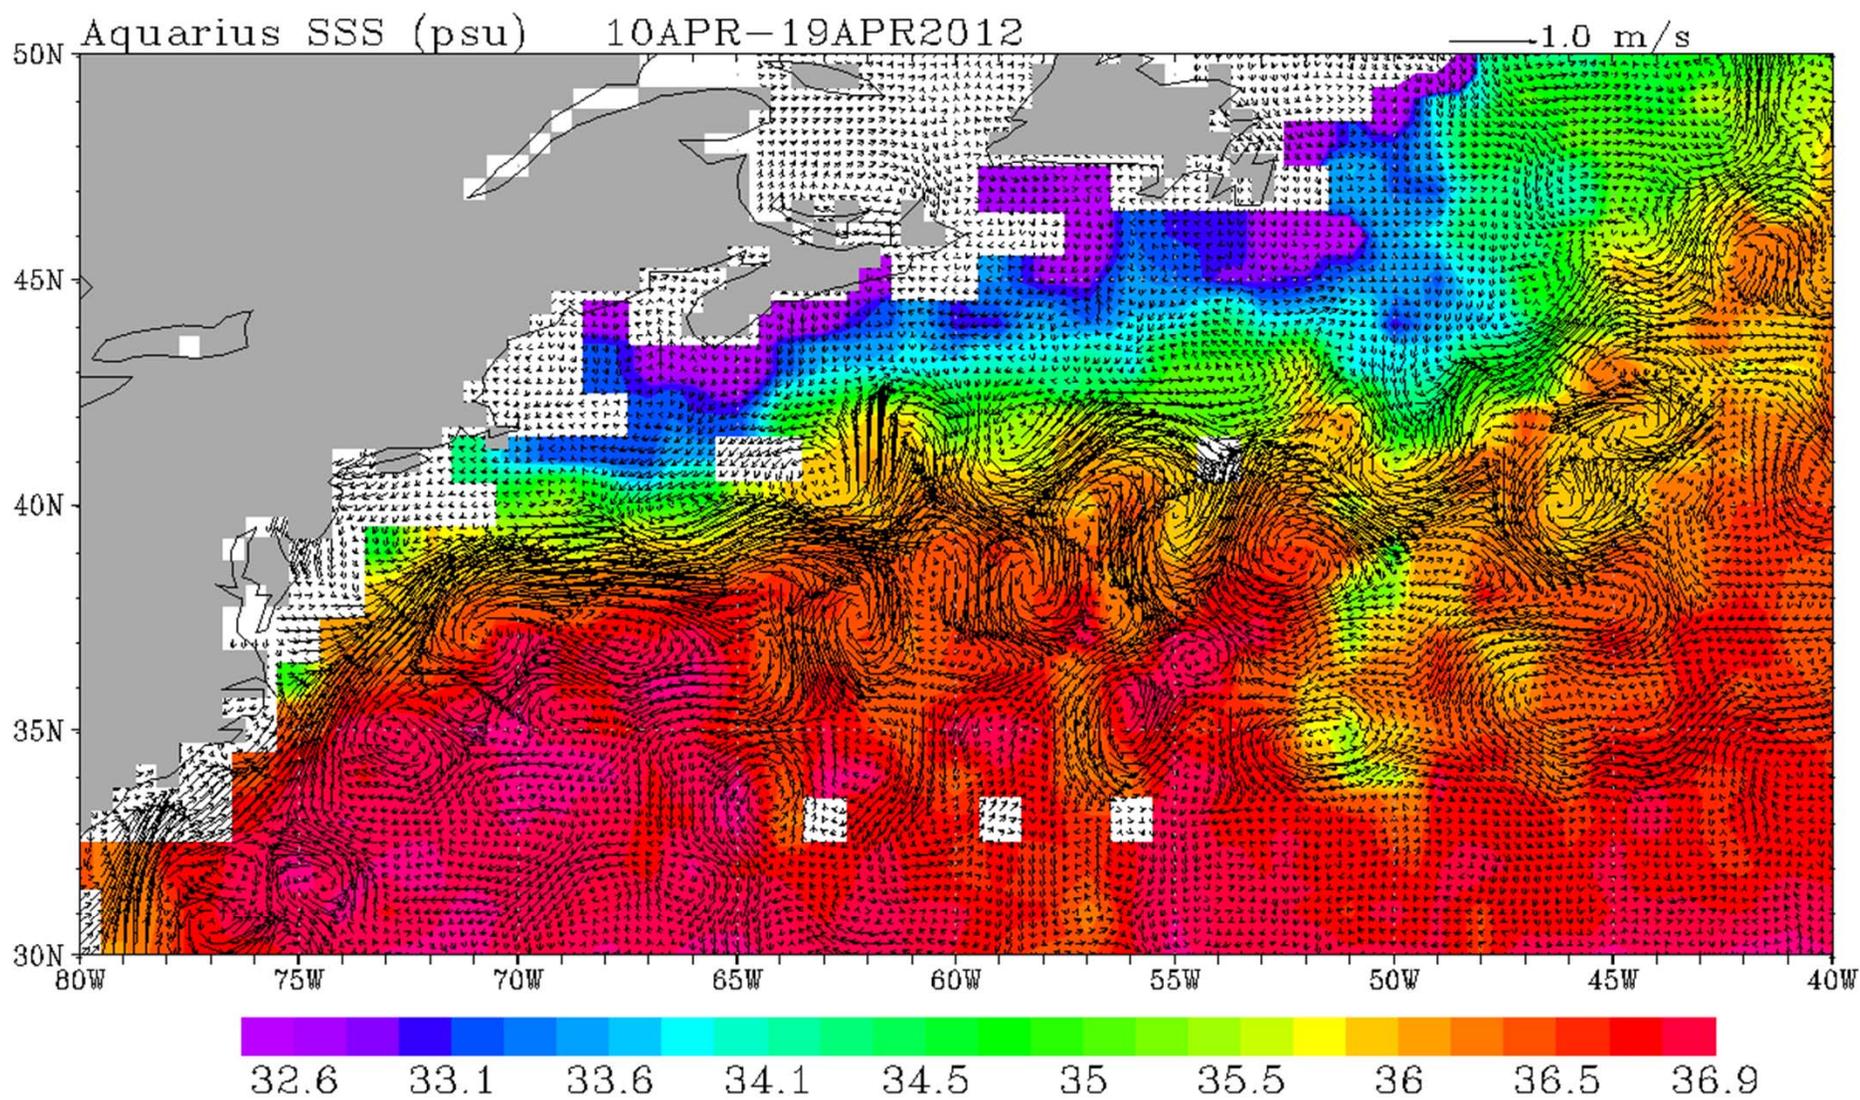

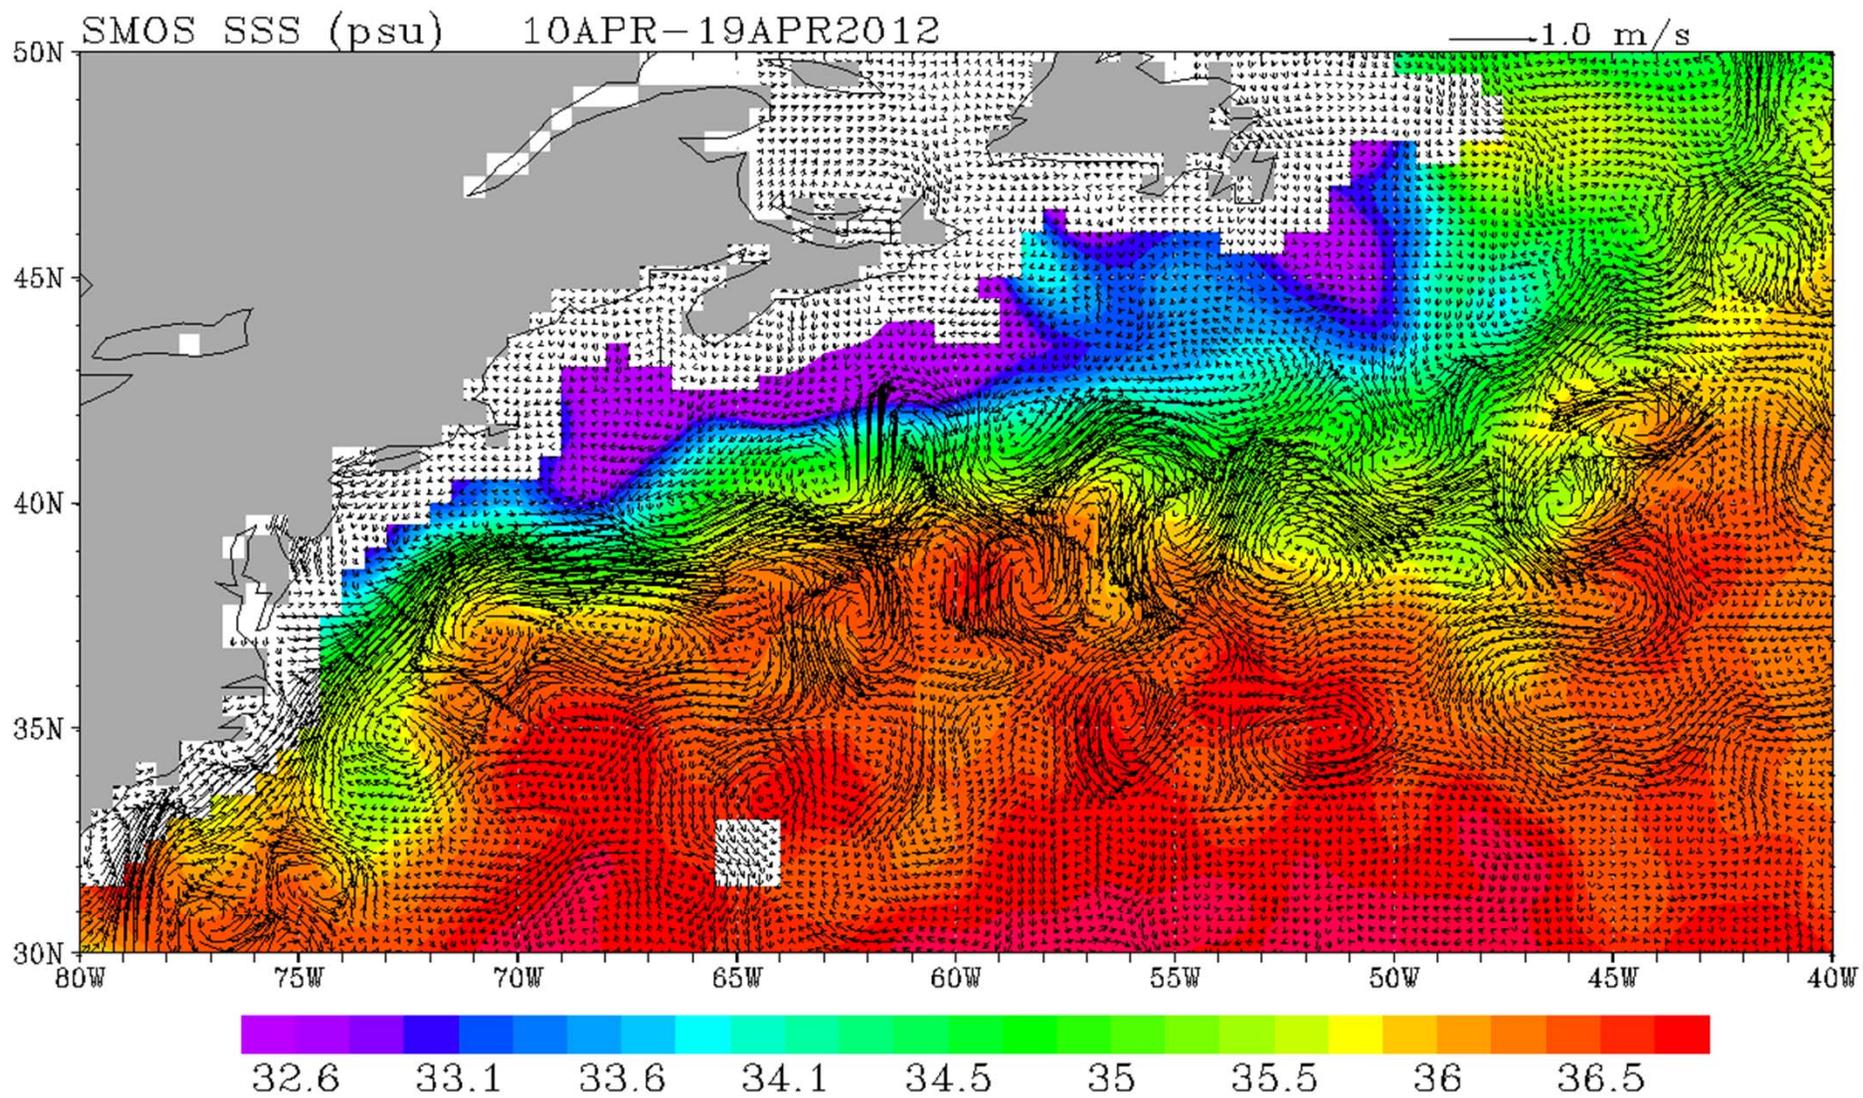

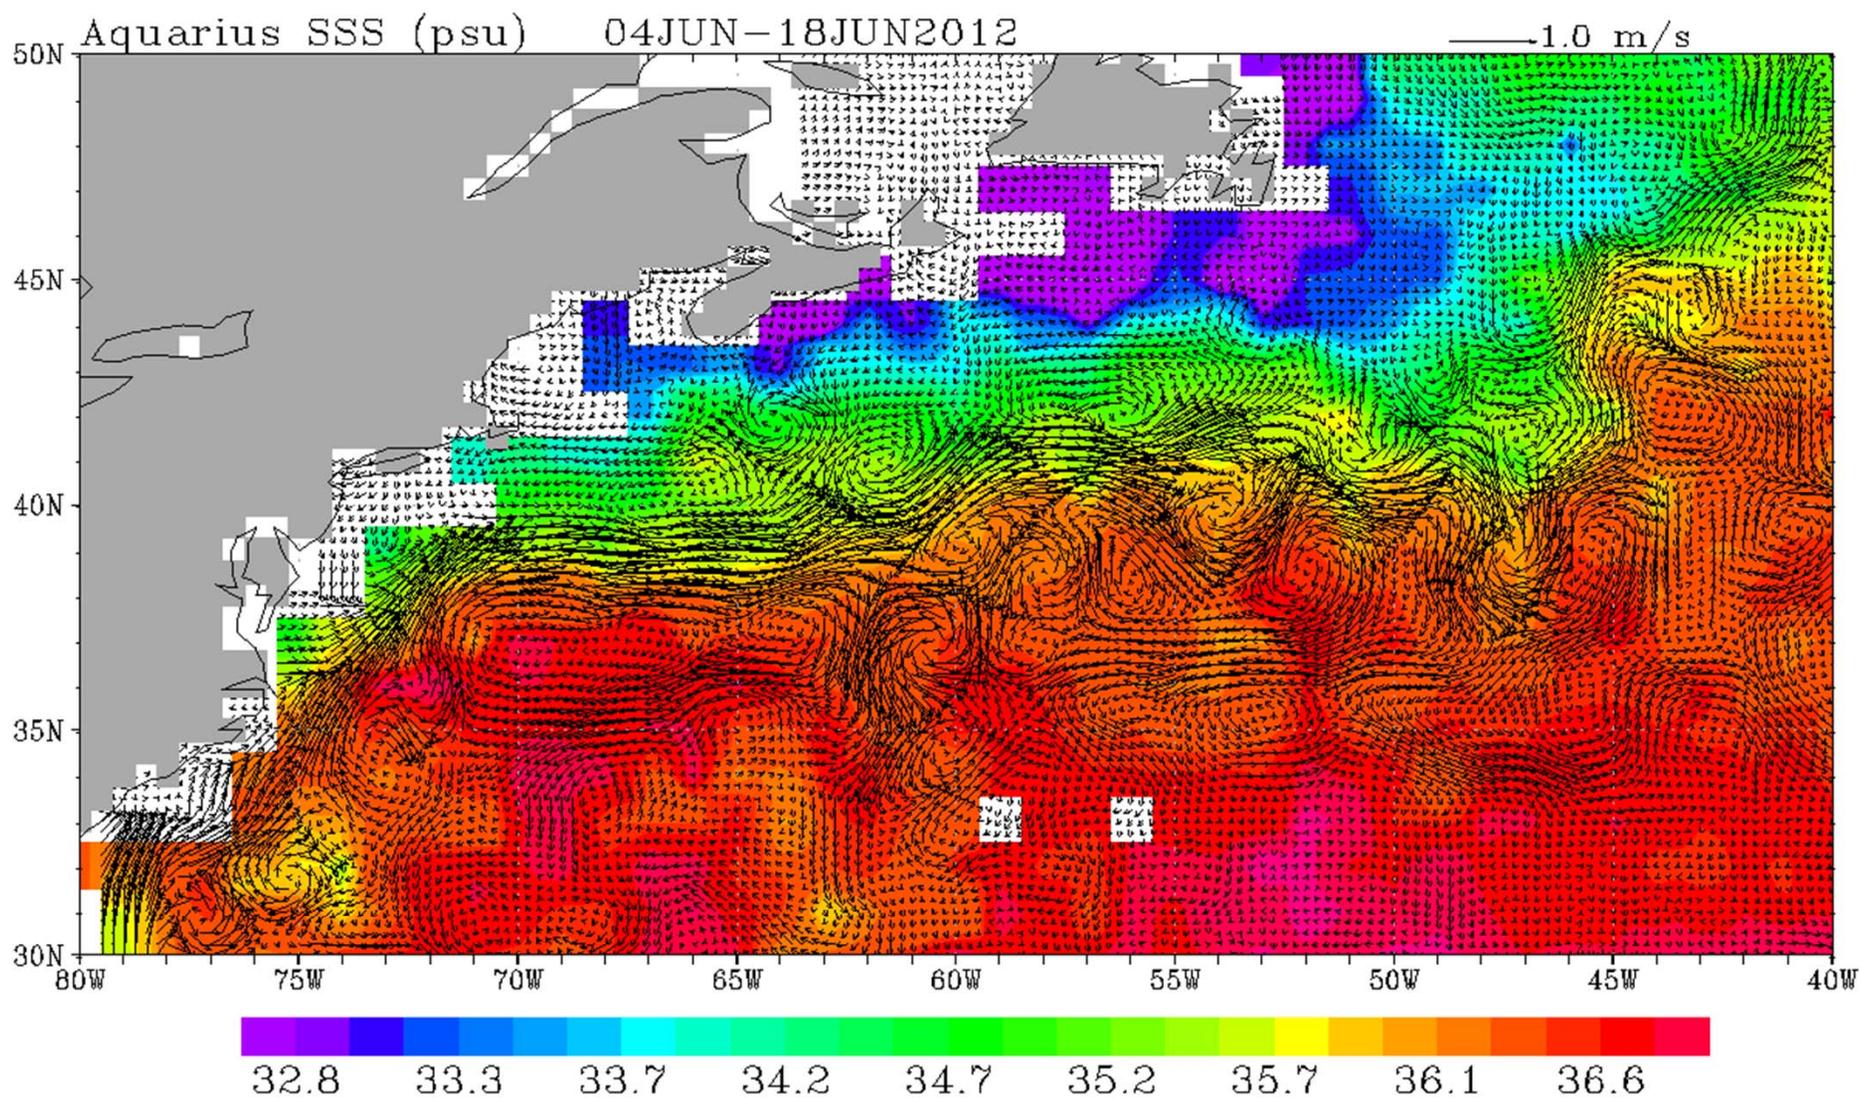

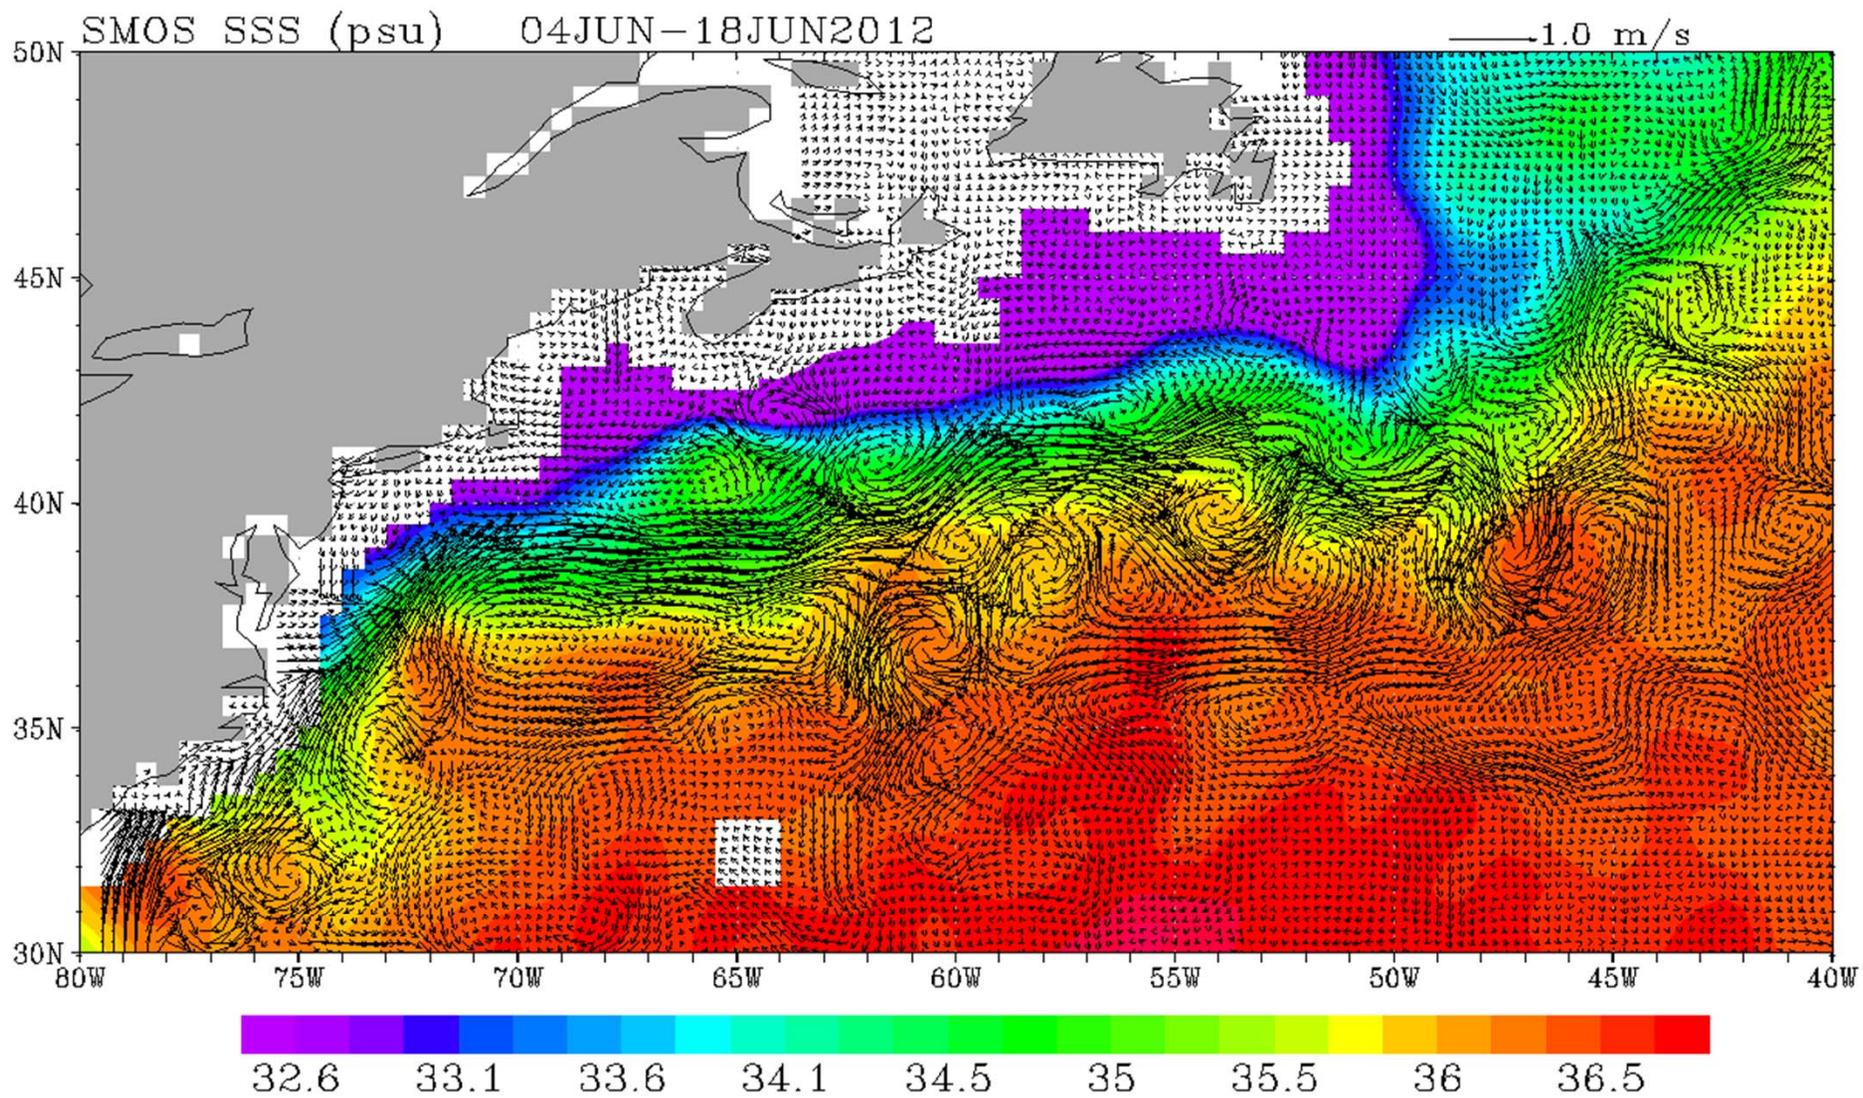

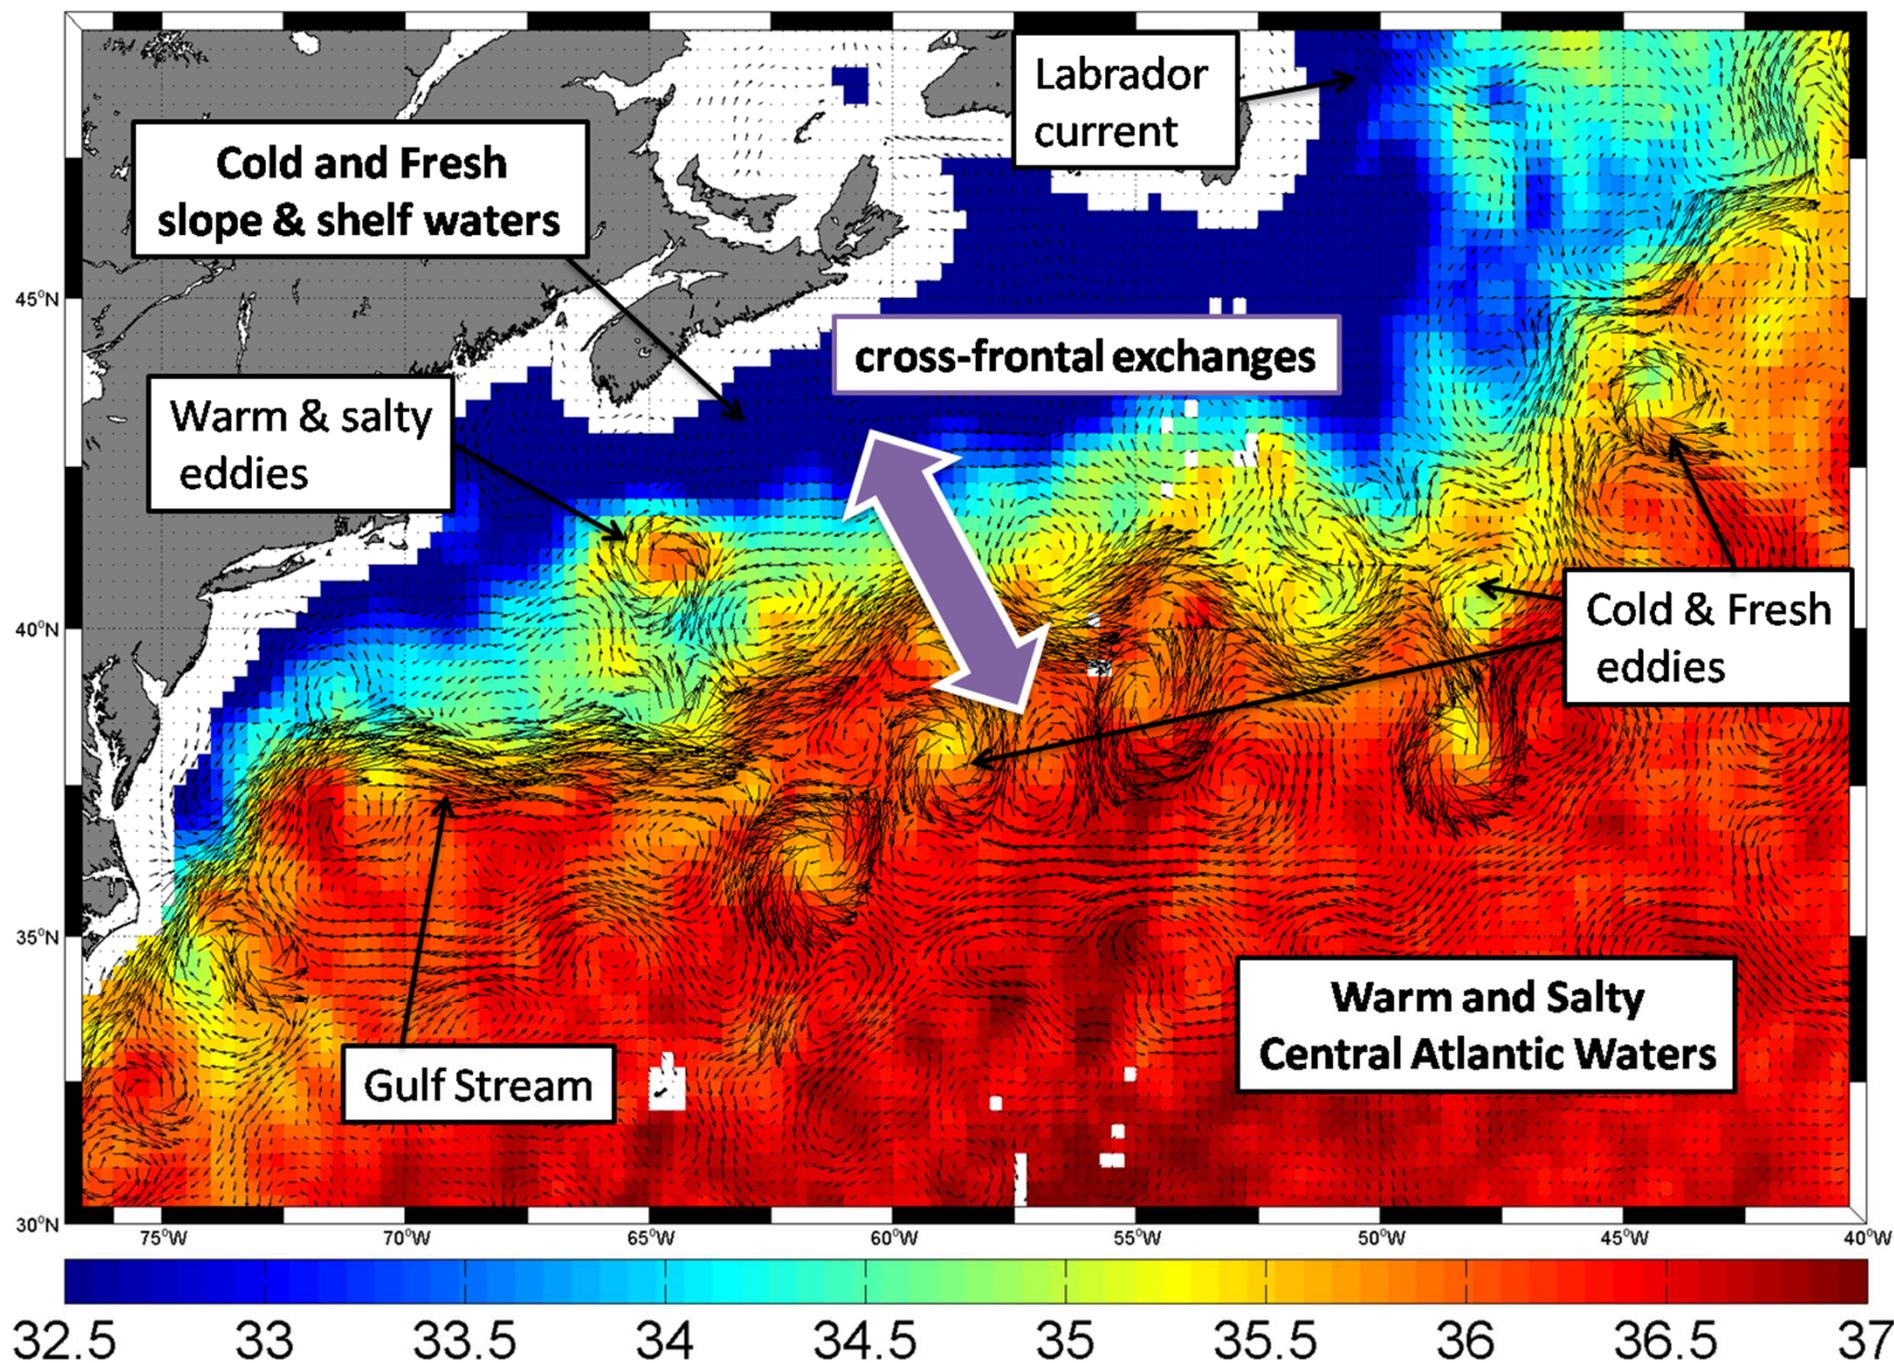

SMOS SSS (color)+ currents (vector) from 04/06 to 18/06 2012

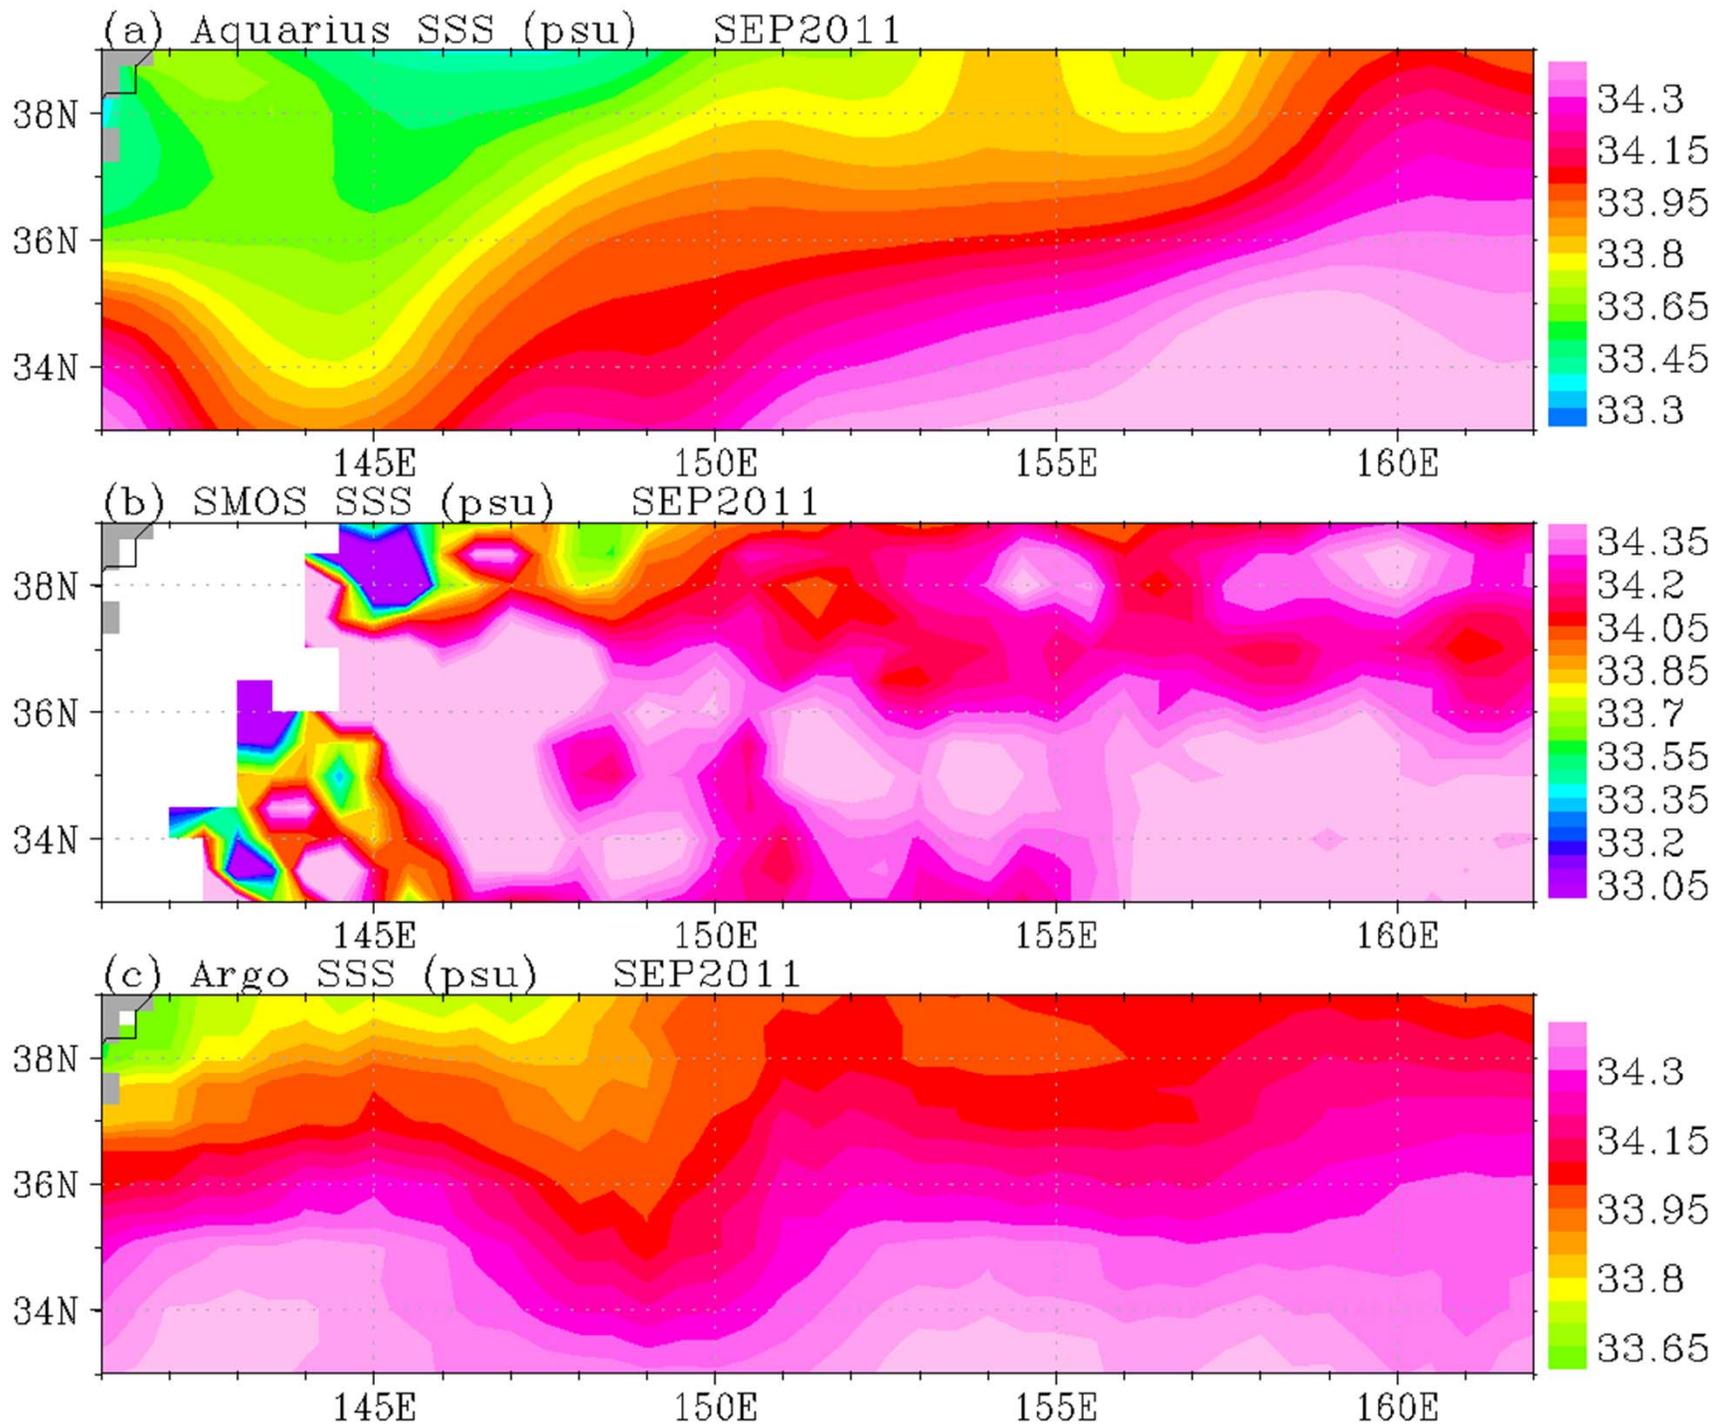

Aquarius reveals salinity and density field

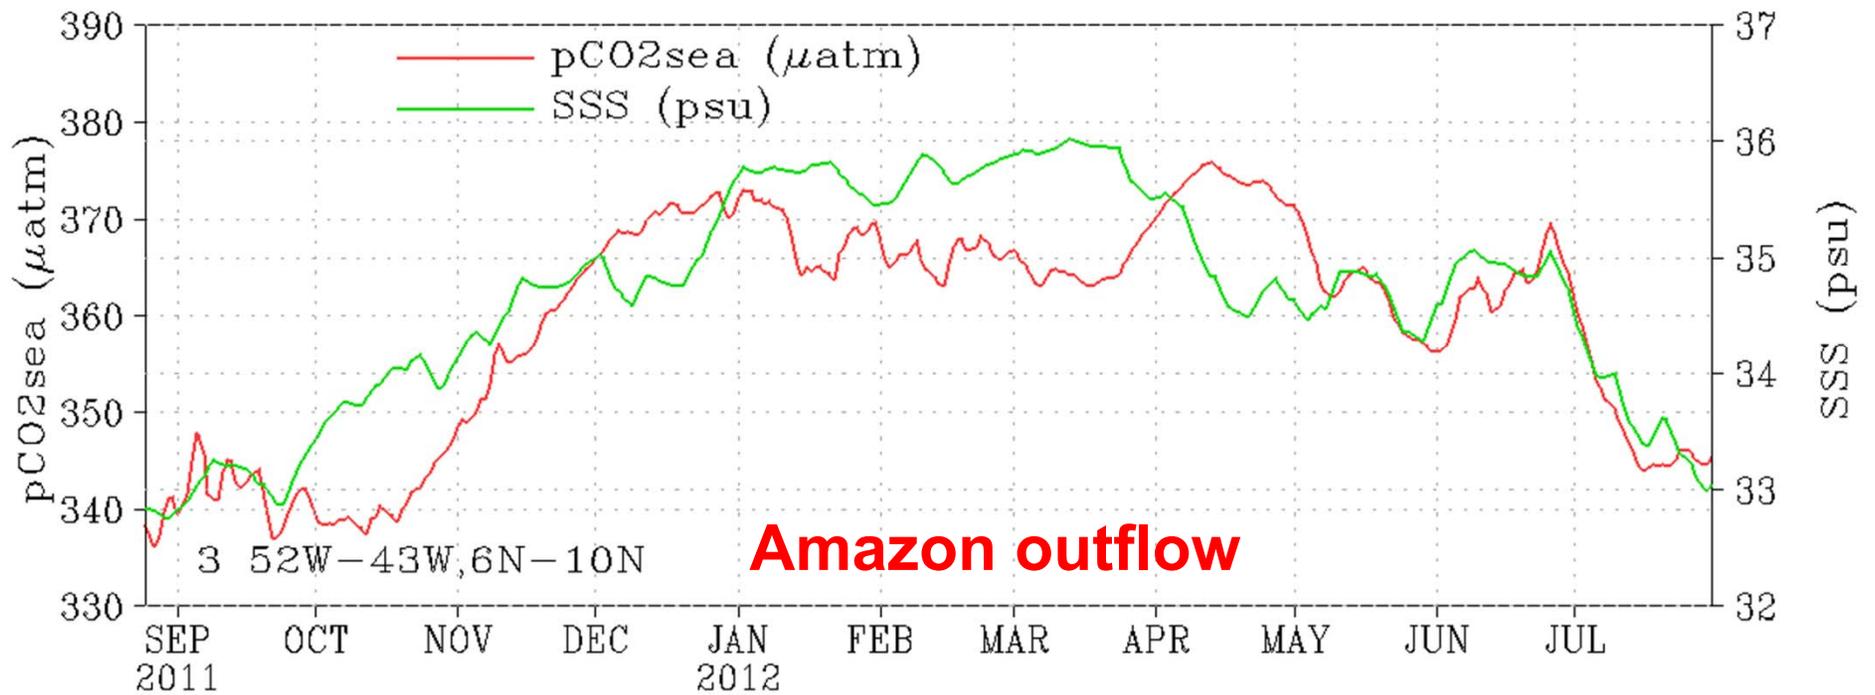

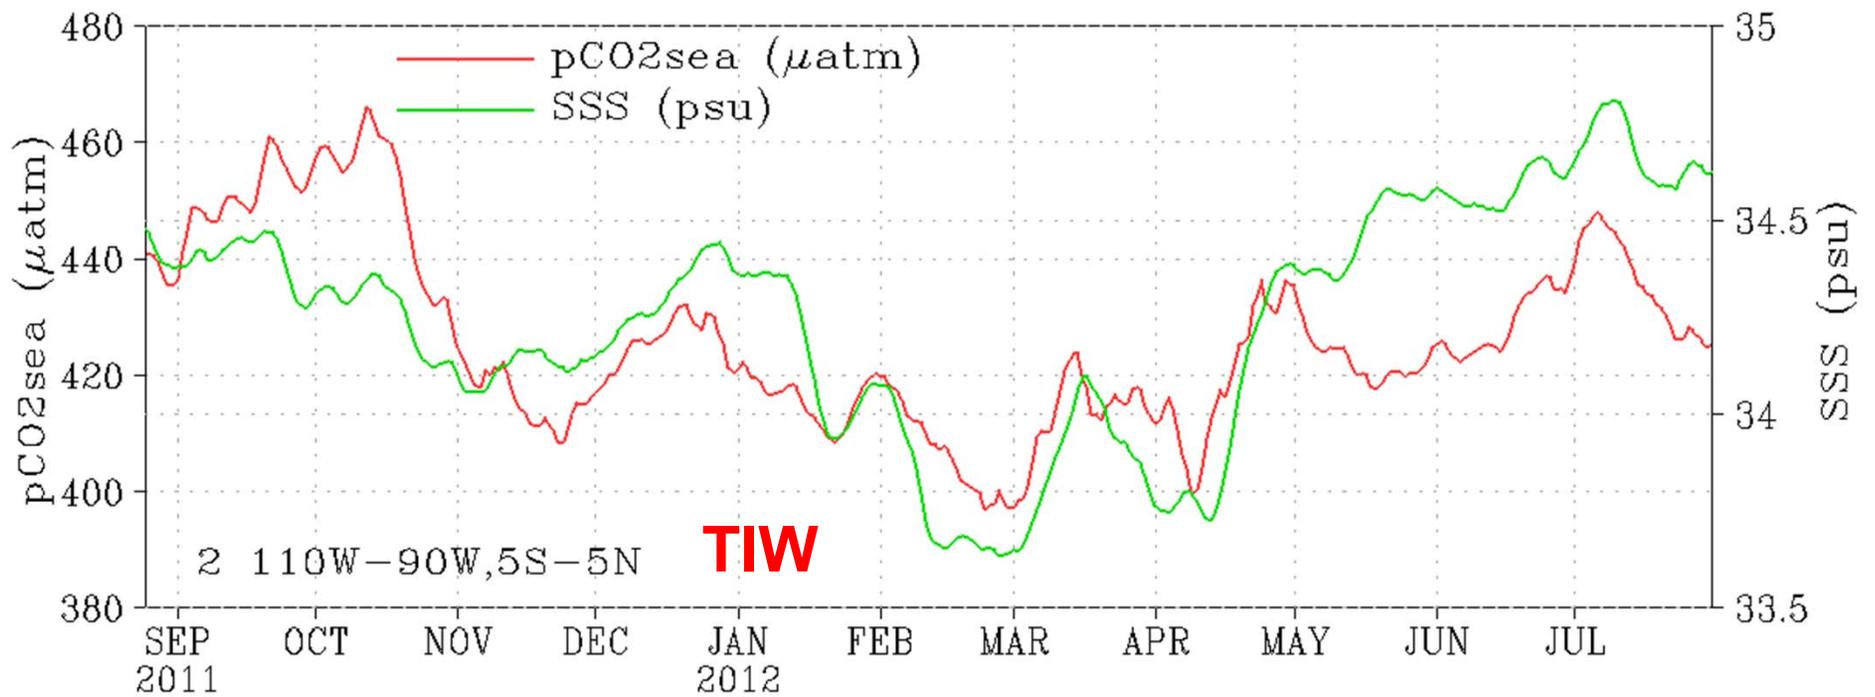

Aquarius links water with carbon cycle through salinity

Aquarius helps to resolve hypothesis of amplification  
of water cycle

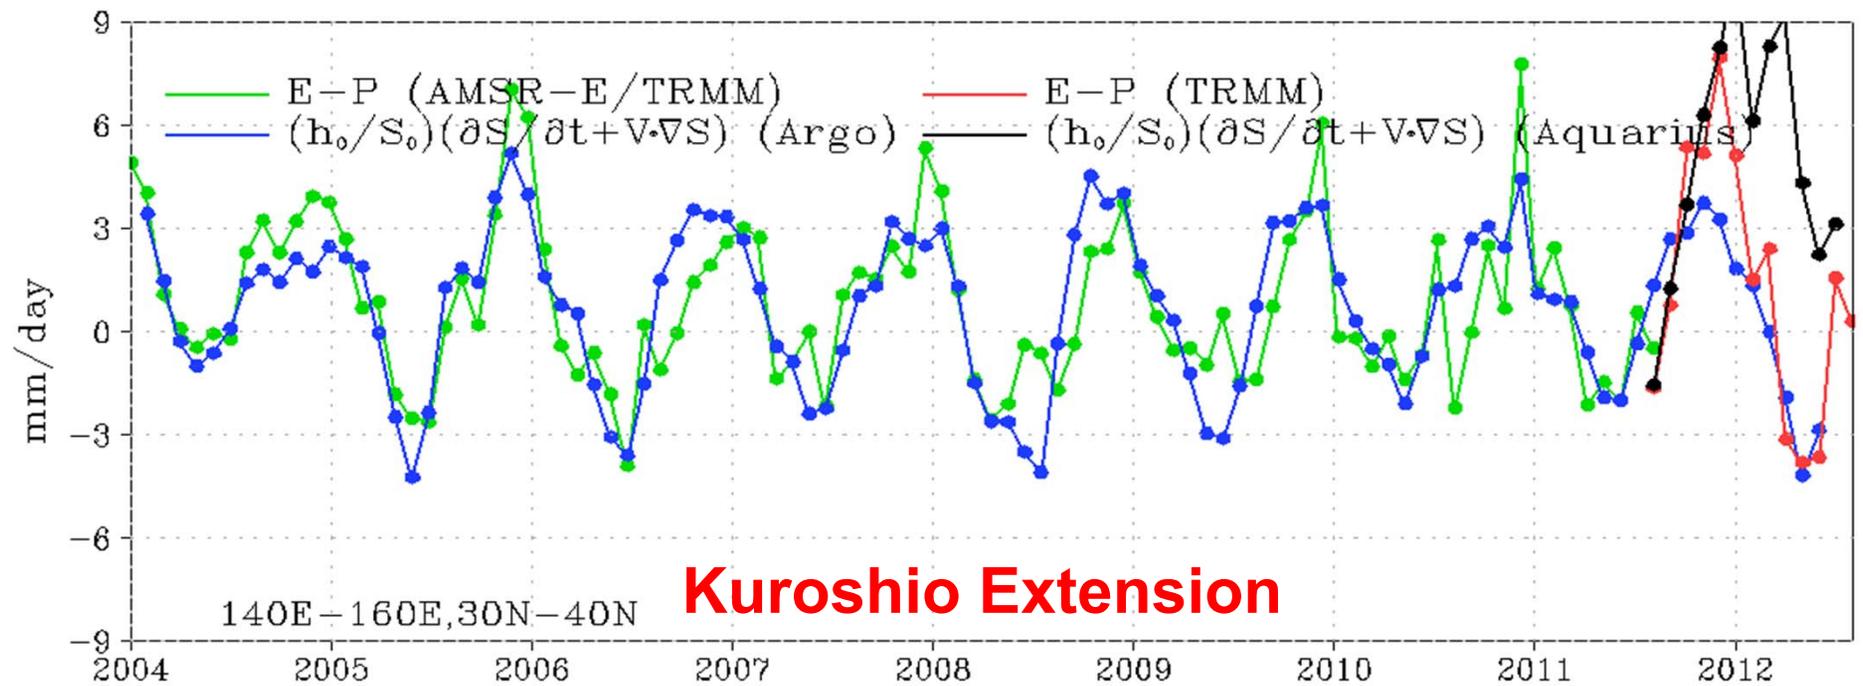

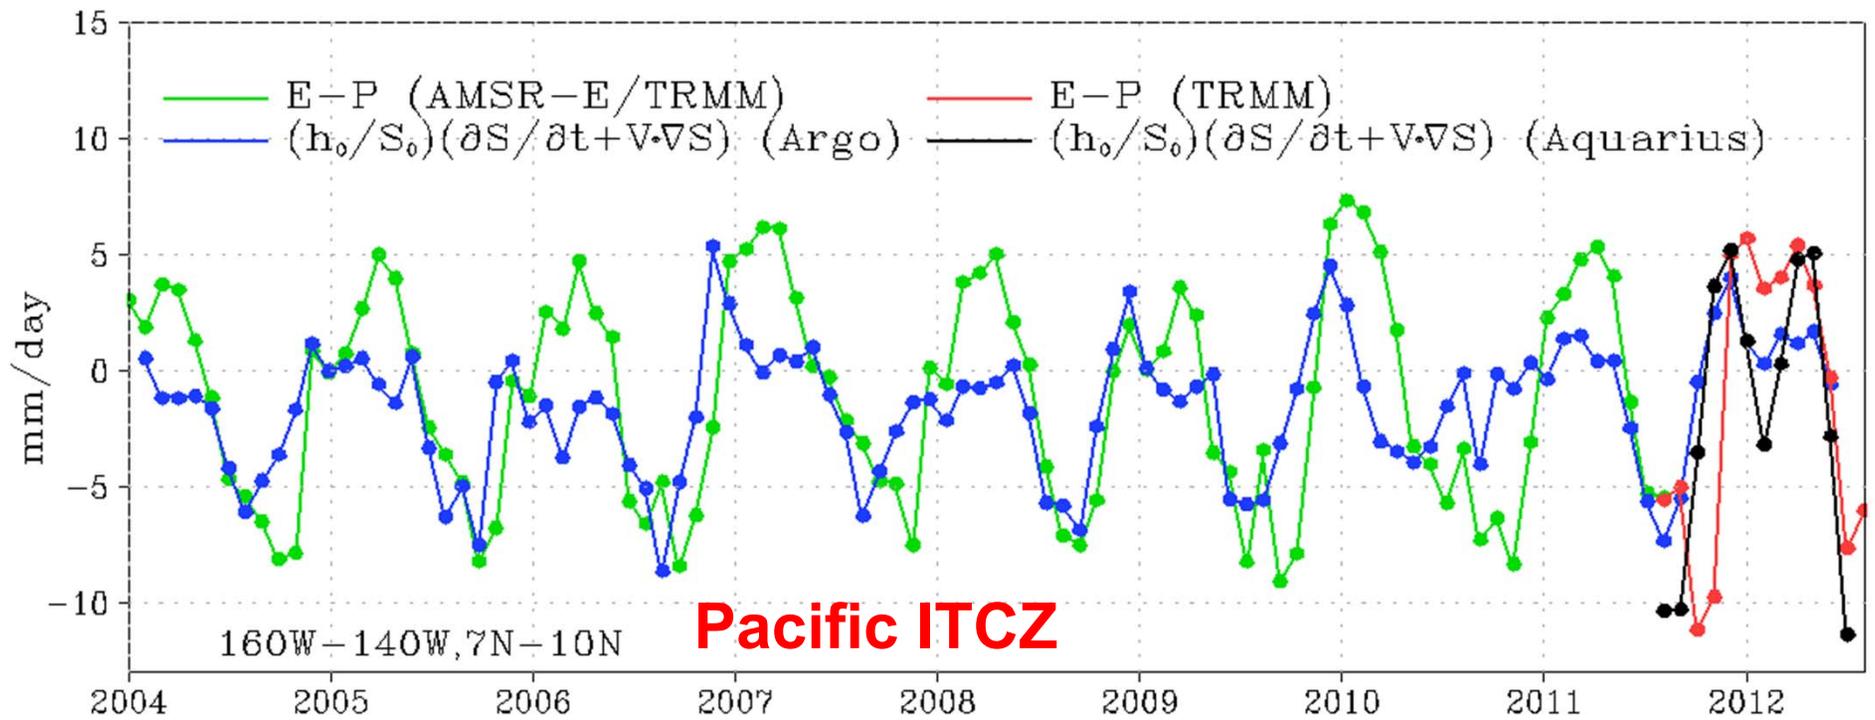

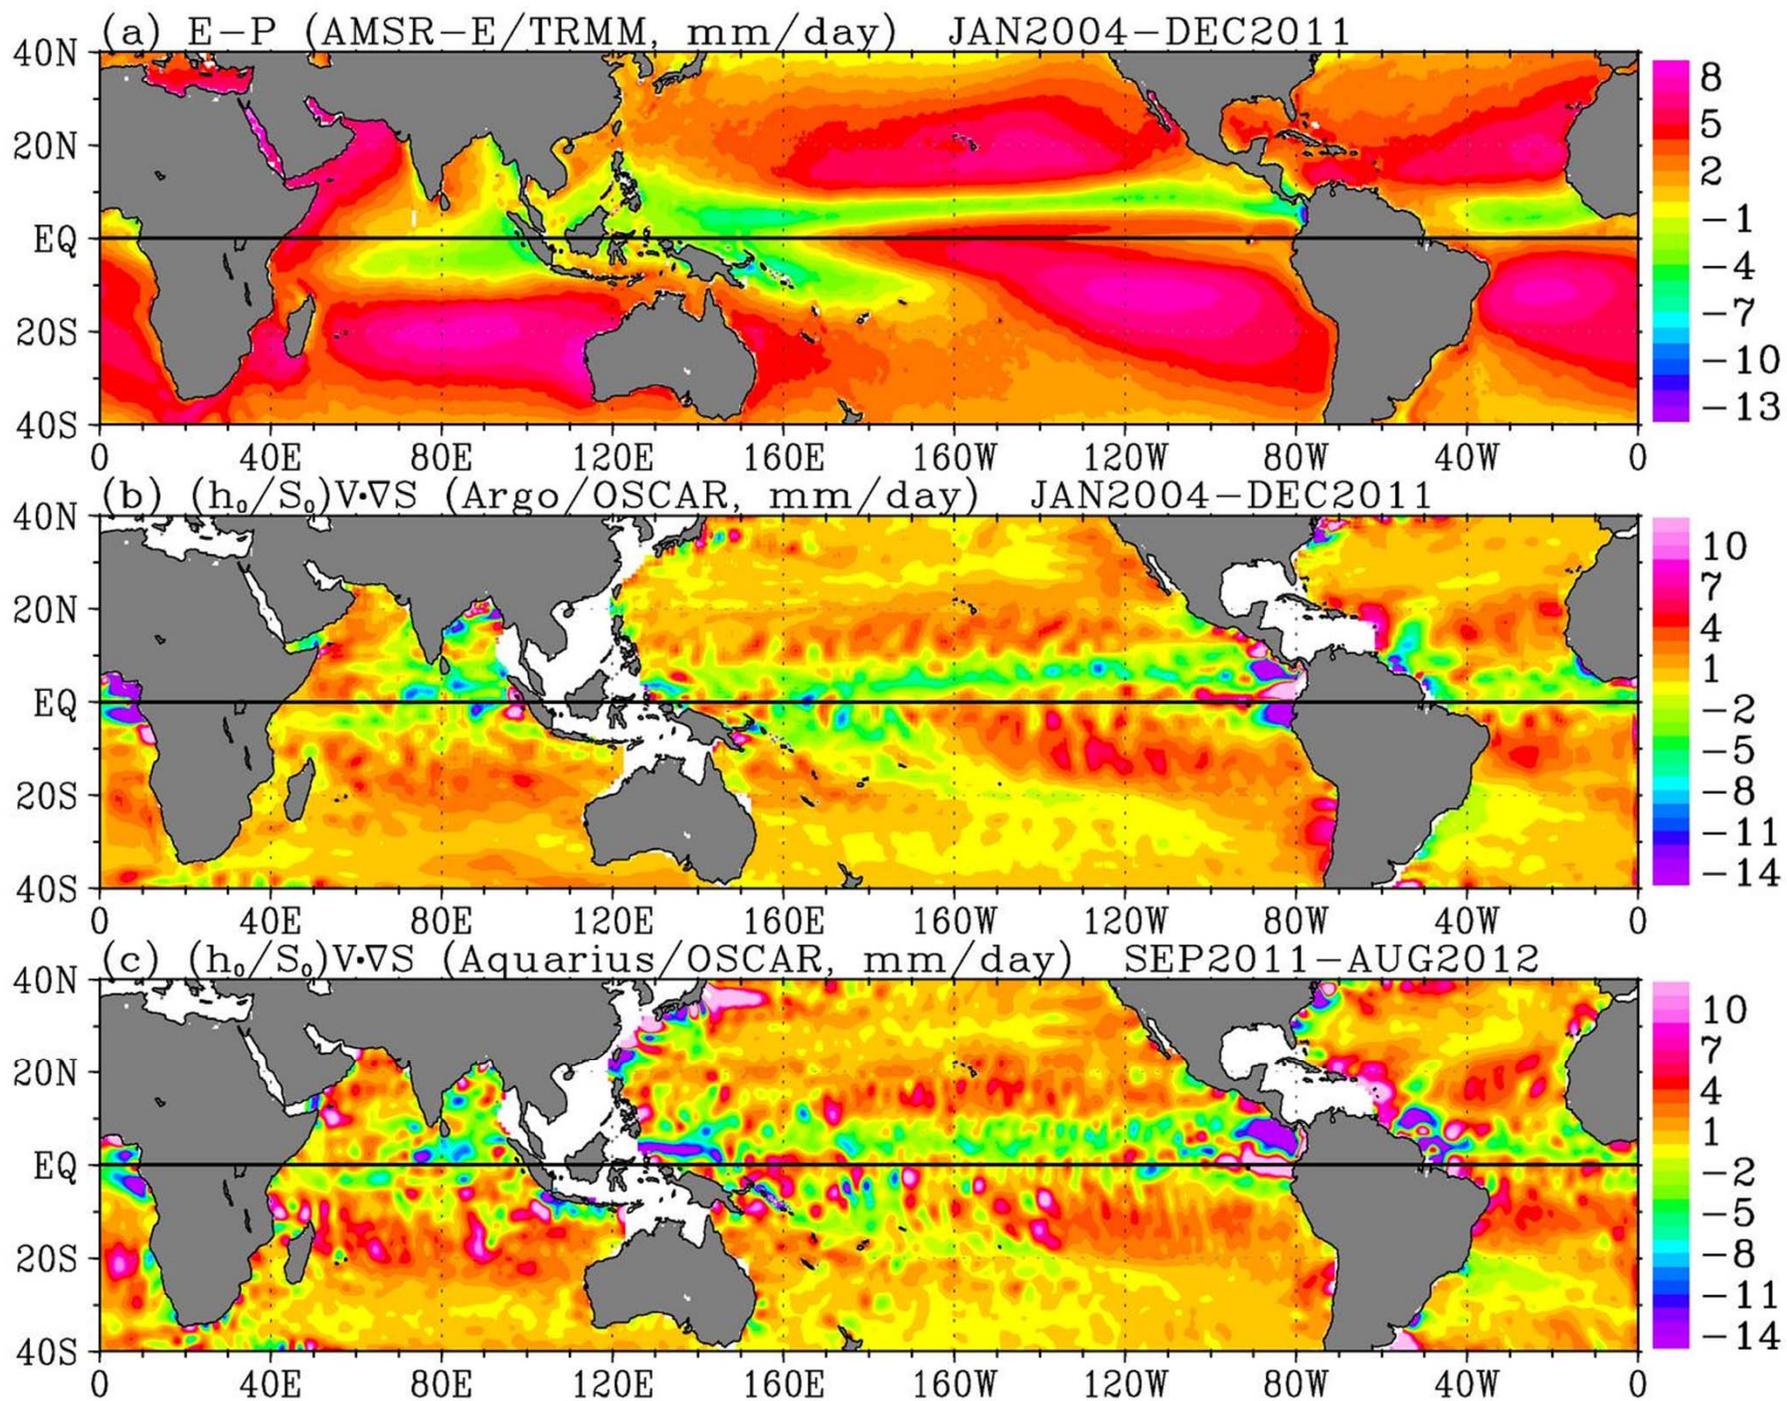

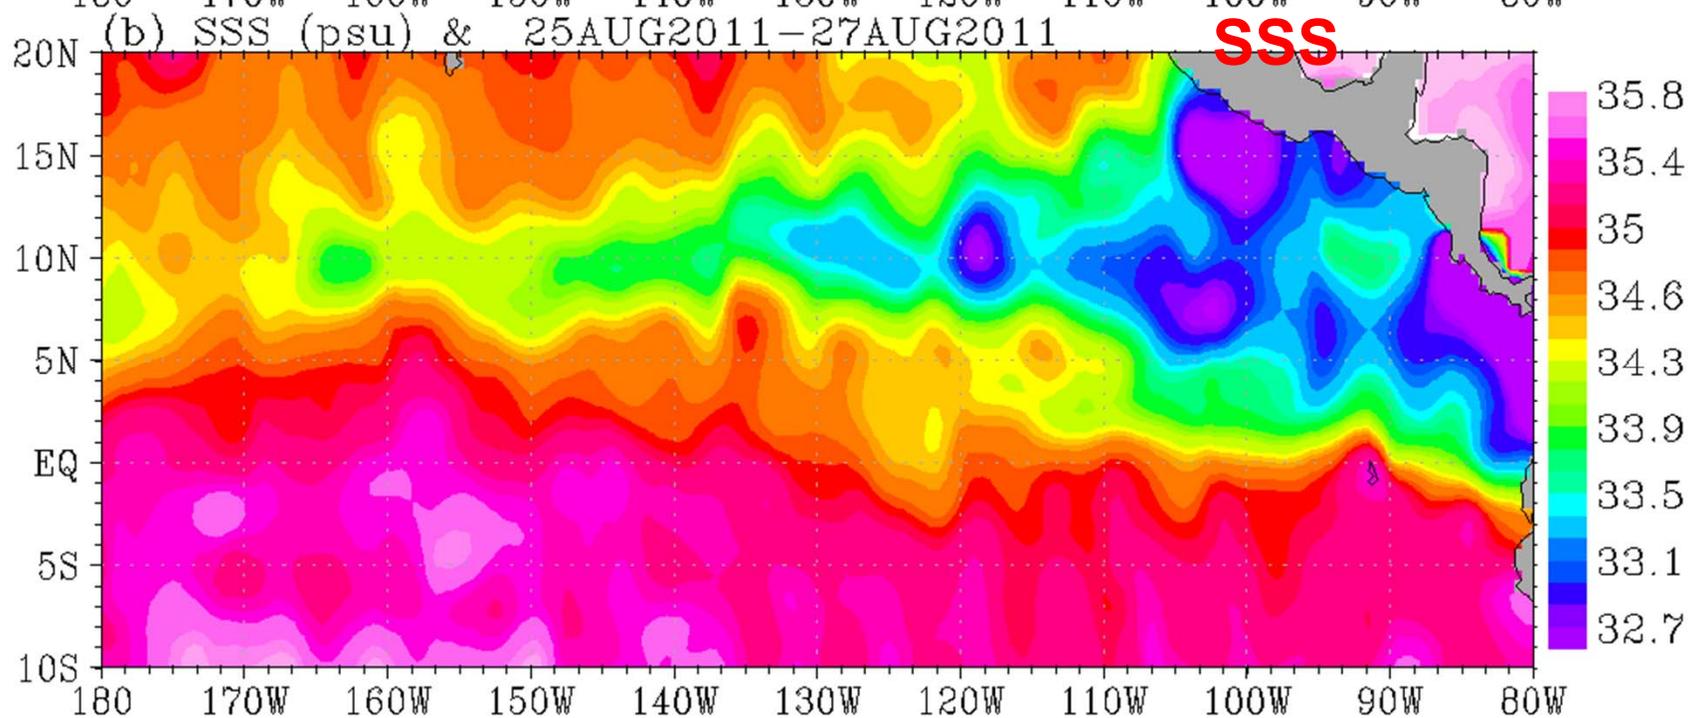

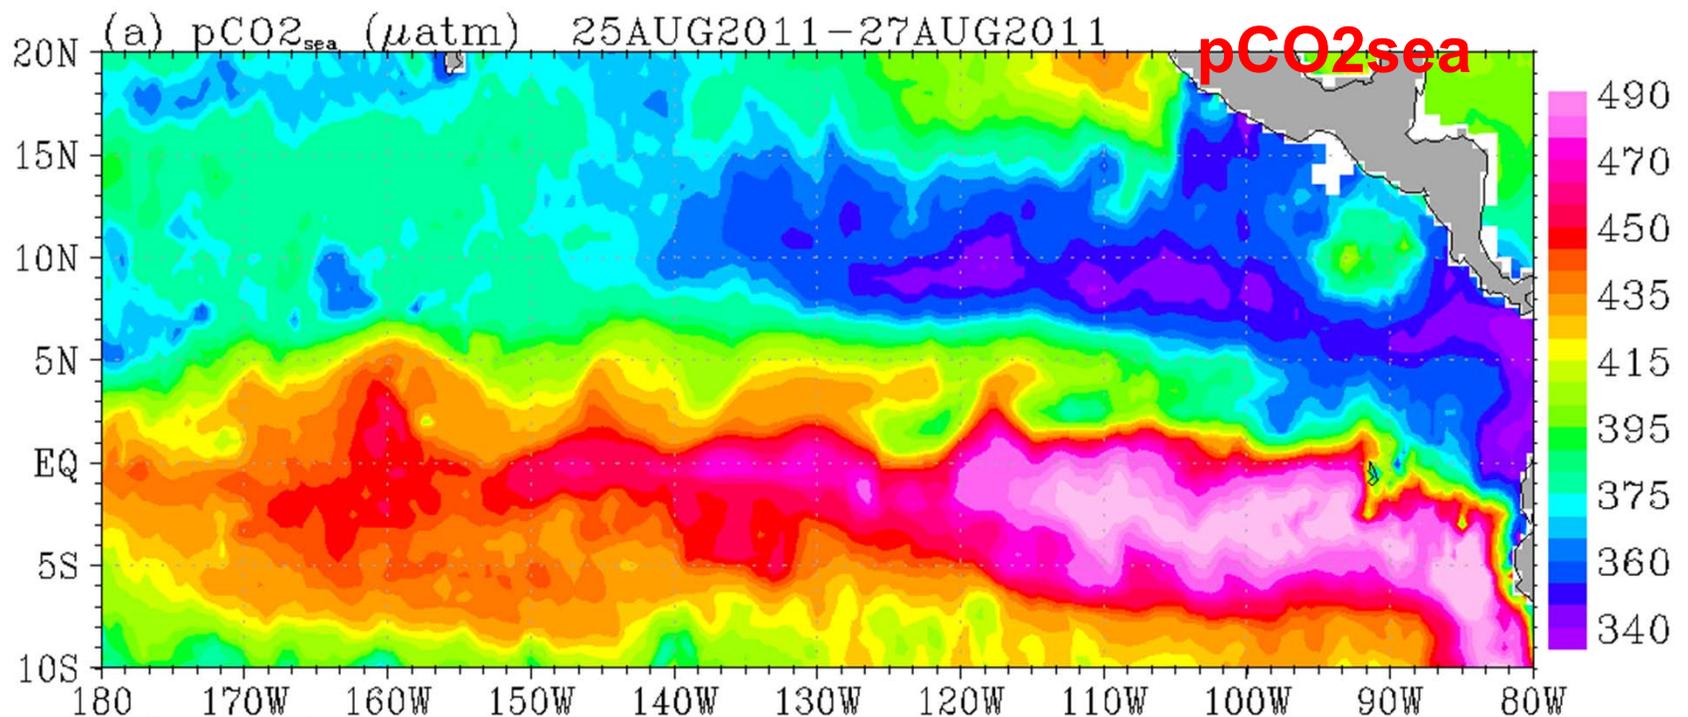

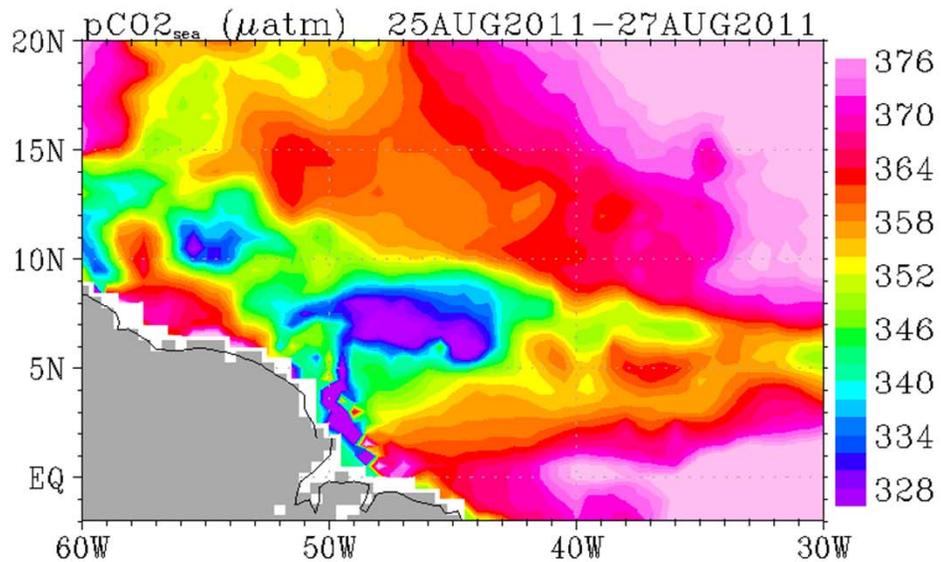

$$E - P = \frac{h_0}{S_0} \left( \frac{\partial S}{\partial t} + \mathbf{V} \cdot \nabla S \right)$$
