SMOS Pilot-Mission Exploitation Platform (Pi-MEP): A hub for validation and exploitation of ESA SMOS Sea Surface Salinity data

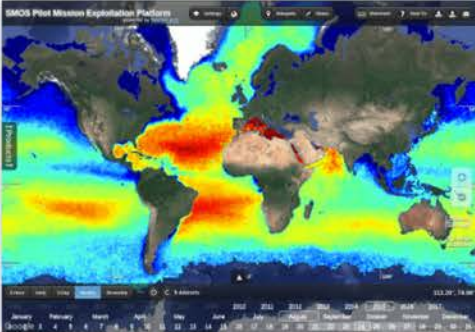

The Soil Moisture and Ocean Salinity (SMOS) mission was launched on 2nd November 2009 as the second Earth Explorer Opportunity mission within ESA's Living Planet programme. It has been continuously providing brightness temperature data in L-Band since January 2010, which are used to retrieve Soil Moisture (SM) and Sea Surface Salinity (SSS) data over land and ocean, respectively. This project funded by ESA is aims at setting up a Pilot Mission Exploitation Platform (Pi-MEP), focussing on ESA's SMOS mission and supporting enhanced validation and scientific process studies over ocean.

Pi-MEP project objectives:

- Focus 1 - Enhanced validation of satellite SSS and products assessment
- Focus 2 - Oceanographic exploitation and case-studies monitoring

	Validation	Exploitation
User	Systematic validation reports and monitoring	Systematic assessment and monitoring selected process studies
Platform	Inspection, visualisation, extraction, computation data/products for validation	Inspection, merging, computation data/products for oceanographic applications

The platform provides several tools and facilities which are described in the [overview](#).

PI-MEP data source

The PI-MEP downloads, regularly updates, archive of required input datasets that are used by the platform to perform satellite SSS remote sensing analyses. There are several types of data:

- Satellite SSS Core datasets (L2/L3/L4)
- In situ Core datasets
- Auxiliary geophysical datasets
- Numerical Weather Prediction (NWP) and Numerical Ocean Prediction (NOP) datasets
- Process study dedicated datasets

These datasets are described in detail in the tables here below:

PI-MEP CORE SATELLITE DATASETS

Dataset Name	Level	Spatial resolution	Temporal coverage	Variables	Version	Provider
		Temporal resolution	Update frequency			
SMOS SSS L2 v662 (ESA)	L2	30-80 km	From 2010-05-01 to present	SSS1	v662	ESA
		50-minute half-orbit	Daily			
SMAP SSS L2 v3 40km (RSS)	L2	~40 km (grid 0.25° x0.25°)	From 2015-03-27 (086) to present	sss_smap	v3	RSS
		98-minute orbit	Monthly			
SMAP SSS L2 v3 70 km (RSS)	L2	~70 km (grid 0.25° x0.25°)	From 2015-03-27 (086) to present	sss_smap	v3	RSS
		98-minute orbit	Monthly			
SMAP SSS L2 v4 (JPL)	L2	39 km x 47 km	From 2015-03-27 (090) to present	smap_sss	v4	JPL
		98-minute orbit	Monthly			
Aquarius SSS L2 OR v5 (NASA-GSFC)	L2	96 km (along-track) x 390 km (cross-track)	From 2011-08-25 (237) to 2015-06-07 (158)	smap_sss	v5	NASA Aquarius project
		98-minute orbit	end of mission data			
Aquarius SSS L2 CAP v5 (JPL)	L2	96 km (along-track) x 390 km (cross-track)	From 2011-08-25 (238) to 2015-06-04 (155)	sss_cap	v5	JPL
		98-minute orbit	end of mission data			
SMOS SSS L3 v3 - 10 Days (CATDS-CPDC)	L3	25 km	From 2010-01-01 to 2017-03-31 (RE05)	Mean_Sea_Surface_Salinity	v3	CATDS CPDC
		10 days (both ascending and descending orbits)	From 2017-04-01 to present (OPER)			
			10 days			
SMOS SSS L3 v3 - Monthly (CATDS-CPDC)	L3	25 km	From 2010-01-01 to 2017-03-31 (RE05)	Mean_Sea_Surface_Salinity	v3	CATDS CPDC
		Monthly (both)	From 2017-04-01 to present (OPER)			
			10 days			
SMOS SSS L3 v3 - 9 Days (CATDS-CECOS-LOCEAN)	L3	0.25°	From 2010-01-16 to 2017-12-31	SSS	v3	CATDS CECOS LOCEAN
		9 days (every 4 days)	yearly			
SMOS SSS L3 v3 - 18 Days (CATDS-CECOS-LOCEAN)	L3	0.25°	From 2010-01-16 to 2016-12-31	SSS	v3	CATDS CECOS LOCEAN
		18 days (every 4 days)	yearly

The characteristics of the 5 major in situ datasets (Argo, TSG, Moorings, surface drifters and Sea mammals) used by the Pi-MEP to validate SMOS, SMAP and Aquarius satellite SSS products are summarize in an "in-situ data report". For each in situ datasets, we detail the QC controls used by the platform and present a series of plots showing:

- Number of SSS data as a function of time and distance to coast
- Histogram of shallowest salinity and pressure (if relevant)
- Spatial maps of the Temporal mean of shallowest salinity and pressure (if relevant)
- Spatial maps of the temporal STD of shallowest salinity
- Spatial density of shallowest salinity
- Δ SSS between local in situ data and ISAS analyses sorted as function of geophysical conditions

The latest in-situ data report produced by the platform is available here:

PI-MEP regions
Acronyms and abbreviations

The platform systematically co-localizes satellite and in-situ SSS products from all sensors and associated data centers with the various pre-processed (Level 2) SSS products. For a given satellite/in situ SSS product pair, the results of the co-location are stored in the so-called Match-up DataBase (MDB) files provided in NetCDF format to the users.

Match-up data consist of satellite and in-situ SSS pair datasets but also of auxiliary geophysical parameters such as local and history of wind speed and rain rates, as well as various information (climatology, distance to coast, mixed layer depth, barrier layer thickness, etc) that can be derived from in situ data and which are included in the final match-up files. Match-up files are generated for each available satellite SSS product files and all available in situ data for the duration of each satellite product.

The granularity of the Match-up files follows the one of the input satellite data product files. The content of the NetCDF files, the in situ QC filtering and the co-localisation methods are described in details in the Match-Up analyses reports available [here](#).

Match-up files can be accessed using either an HTTP or FTP client using the following menu:

Match-up database reports

INPUTS

```
pimep-mdb_satelliteID_insituID_*_V01.nc
```

MDB analyzer code design

- 1) Read each MDB dataset file
- 2) Extraction of sub-dataset corresponding to the predefined Pi-MEP region
- 3) Systematically generate predefined plots, tables and statistics for each zone
- 4) Generate pdf reports

OUTPUTS

```
pimep-mdb-report_regionID_satelliteID_insituID.pdf  
pimep-mdb-figure_satelliteID_insituID.png  
pimep-mdb-ncfile_satelliteID_insituID.nc  
pimep-mdb-stat_satelliteID_insituID.csv
```

In-situ Match-up Match-up reports

Results of systematic analyses of the Match-up DataBase (MDB) files generated by the PI-MEP are provided to the users in the form of specific PDF reports here below. MDB files are analyzed for all pairs of Satellite/In situ SSS data and for an ensemble of 30 geographical [Pi-MEP regions](#). Each report presents successively:
The MDB file DataSets:

- A short description of the satellite SSS product considered in the match-up
- A short description of the In situ SSS dataset considered in the match-up
- A short description of the auxiliary geophysical datasets co-localized with SSS pairs
- An overview of how the Match-ups were evaluated
- An overview of the MDB characteristics for the particular in situ/satellite pairs

The major results of the MDB file Analyses:

- Spatial Maps of the Time-mean and temporal STD of in situ and satellite SSS and of the ΔSSS where $\Delta SSS = SSS_{SAT} - SSS_{in situ}$ denotes the difference between the satellite and in situ SSS at the colocalized points that form the MDB,
- Time series of the monthly averaged mean and STD of in situ and satellite SSS and of the ΔSSS ,
- Zonally-averaged Time-mean and temporal STD of in situ and satellite SSS and of the ΔSSS ,
- Scatterplots of satellite vs in situ SSS by latitudinal bands,
- Time series of the monthly averaged mean and STD of the ΔSSS sorted by latitudinal bands,
- ΔSSS sorted as function of geophysical conditions,
- A summary with tables of statistics and validation metrics.

All analyses are conducted over the user-chosen Pi-MEP Region, satellite/In situ SSS pair and over the full satellite SSS product period. The Match-Up analyses reports can be accessed using the menu below:

Match-up database Analyses Report

Aquarius-L2-OR-V5

Argo

Global Ocean

prepared by the Pi-MEP Consortium
May 15, 2018

Match-up characteristics

2.5 MDB characteristics for the particular in situ/satellite pairs

2.5.1 Number of paired SSS data as a function of time and distance to coast

Figure 1: Number of match-ups between Argo and SMOS-L2-DPGS-v662 SSS as a function of time (a) and as function of the distance to coast (b) over the Global Ocean Pi-MEP region and for the full satellite product period.

2.5.2 Histograms of the SSS match-ups

Figure 2: Histograms of SSS from Argo (a) and SMOS-L2-DPGS-v662 (b) considering all match-up pairs per bins of 0.1 over the Global Ocean Pi-MEP region and for the full satellite product period.

2.5.5 Histograms of the spatial and temporal lags of the match-ups pairs

Figure 5: Histograms of the spatial (a) and temporal (b) lags between the time of the Argo measurements and the date of the corresponding SMOS-L2-DPGS-v662 SSS product.

2.5.3 Distribution in situ SSS depth in match-ups pairs

Figure 3: Histograms of the depth of the upper level SSS measurements from Argo in the Match-up DataBase for the Global Ocean Pi-MEP region (a) and temporal mean spatial distribution of pressure of the in situ SSS data over $1^\circ \times 1^\circ$ boxes and for the full satellite product period (b).

2.5.4 Spatial Distribution of Match-ups

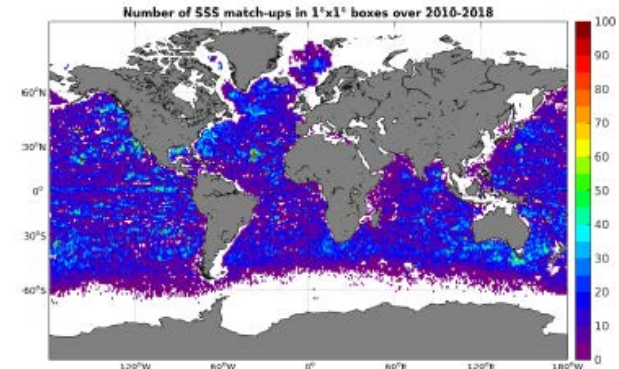

Figure 4: Number of SSS match-ups between Argo and the SMOS-L2-DPGS-v662 SSS product for the Global Ocean Pi-MEP region over $1^\circ \times 1^\circ$ boxes and for the full satellite product period.

Match-up analyses

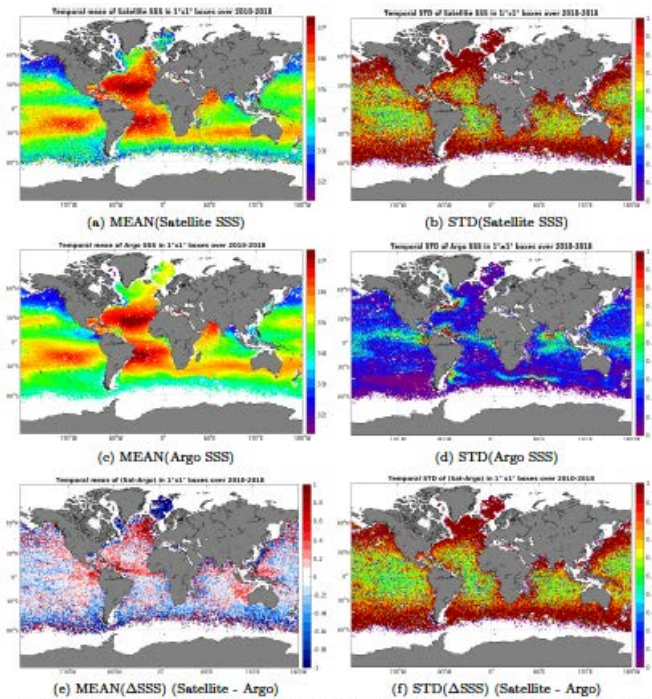

Figure 6: Temporal mean (left) and STD (right) of SSS from SMOS-L2-DPGS-v662 (top), Argo (middle), and of Δ SSS (Satellite - Argo). Only match-up pairs are used to generate these maps.

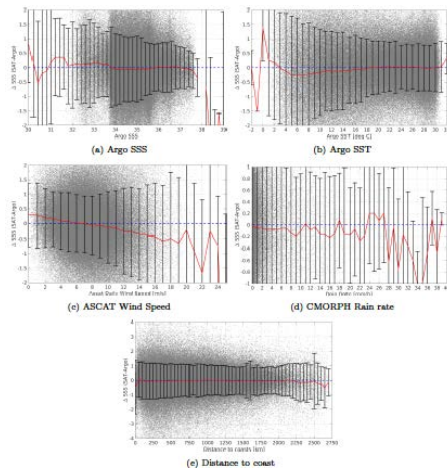

Figure 7: Time series of the monthly averaged mean SSS (top), mean Δ SSS (Satellite - Argo) and STD of Δ SSS (Satellite - Argo) over the Global Ocean Pi-MEP region considering all match-ups collected by the Pi-MEP platform.

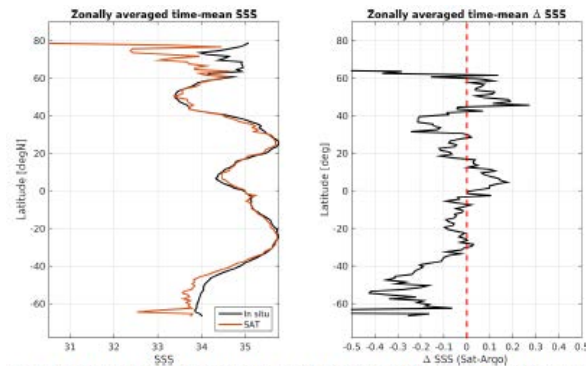

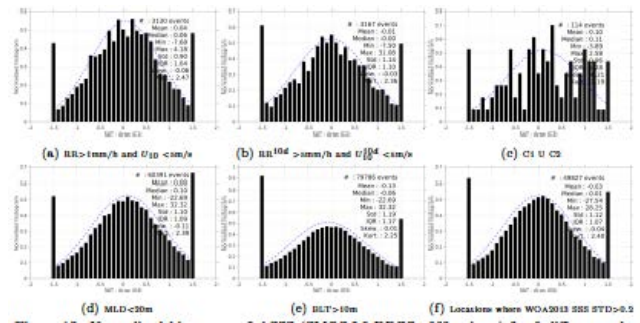

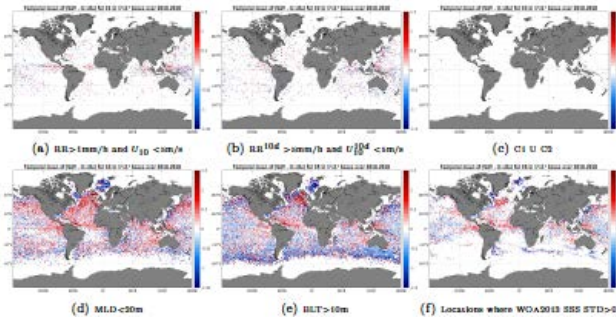

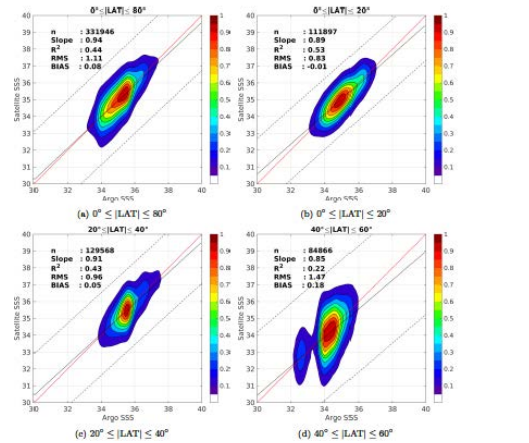

Figure 8: Left panel: Zonally averaged time mean SSS from SMOS-L2-DPGS-v662 (black) and from Argo (blue). Right panel: zonally averaged time-mean Δ SSS (Satellite - Argo) for all the collected Pi-MEP match-up pairs estimated over the full satellite product period.

Pi-MEP systematic reporting

- By satellite products (37)
- By in situ database (10)
- By Pi-MEP region (30)

~ 9.000 reports

~40 plots/report

~1 min to generate 1 report

Pi-MEP TOOLS

Pi-MEP provides 5 different tools to **explore**, **visualize** and **extract** SSS related datasets:

- Syntool
- Plots interface
- Match-up interface
- Merginator
- Jupyter

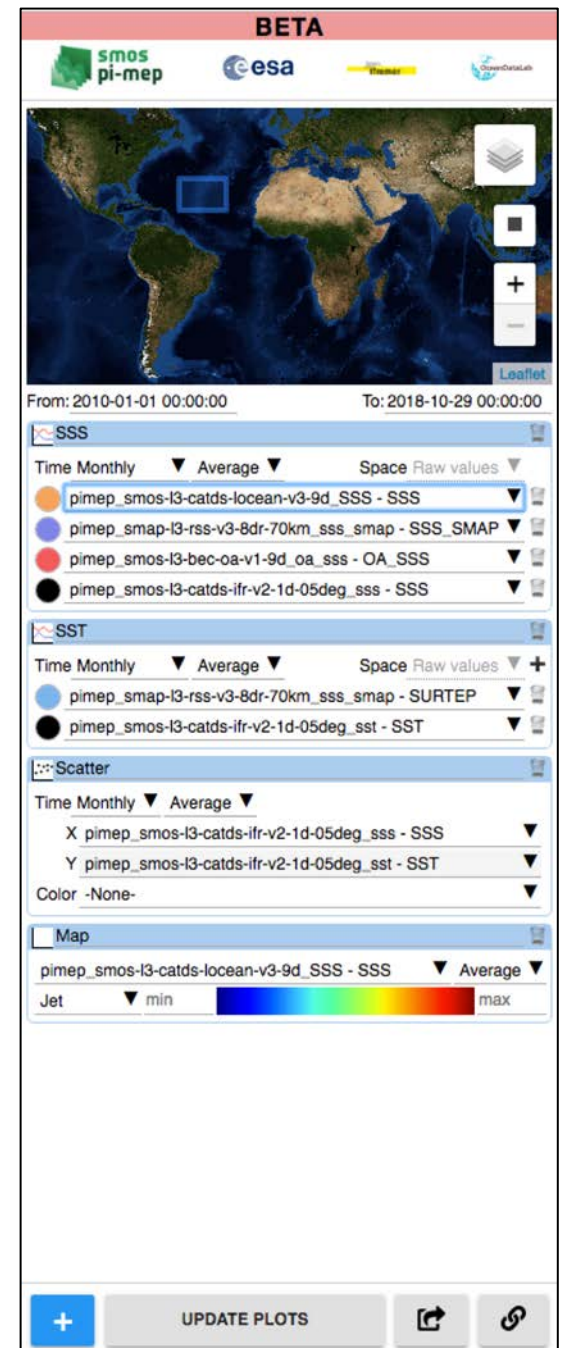

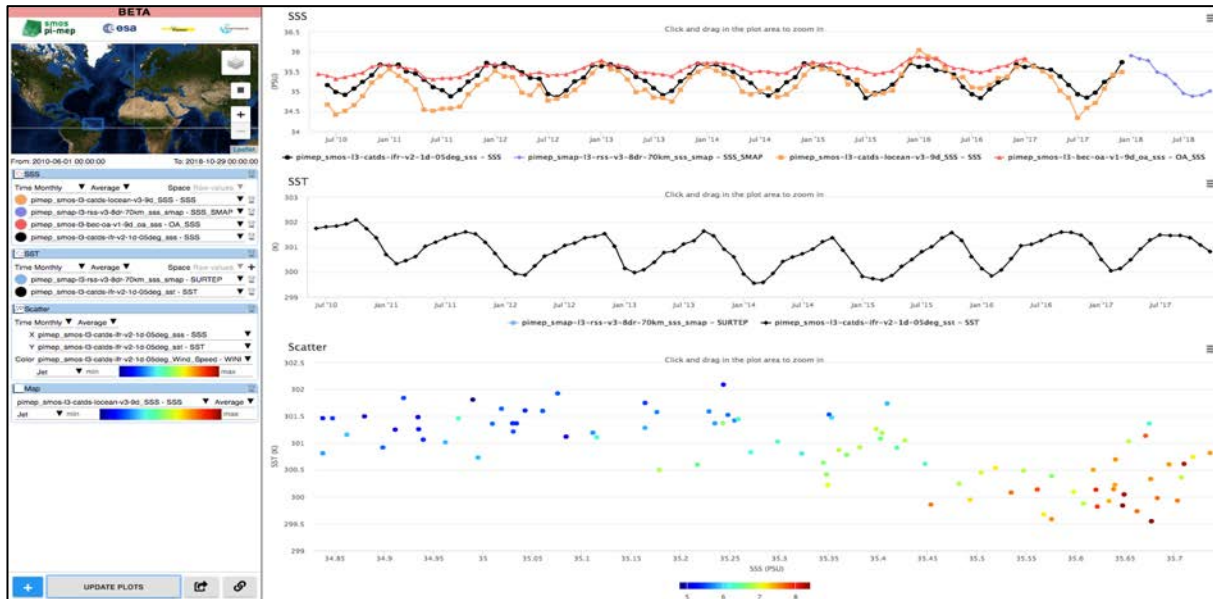

Syntool

Plots interface

Interface with five types of plots :

- Time series
- Scatterplots
- Histograms
- Hovmöller diagrams
- Maps

Match-up interface

Interface to query MDB data and :

- Extract match-ups (CSV, JSON or NetCDF)
- Generate plots for match-up metrics
- Produce custom PDF reports

- MDB Spatial Spectrum

The platform systematically co-localizes all Level 2 to Level 4 satellite and associated data centers with the various pre-processed (QC-controlled) in situ datasets.

For a given satellite/in situ SSS product pair, the results of the co-localization are stored in the so-called match-up DataBase (MDB) files provided in netcdf format to the users. MDB data consist of satellite and in-situ SSS pair datasets but also of auxiliary geophysical parameters such as local and history of wind speed and rain rates, as well as various information (climatology, distance to coast, mixed layer depth, barrier layer thickness, etc) that can be derived from in situ data and which are included in the final match-up files.

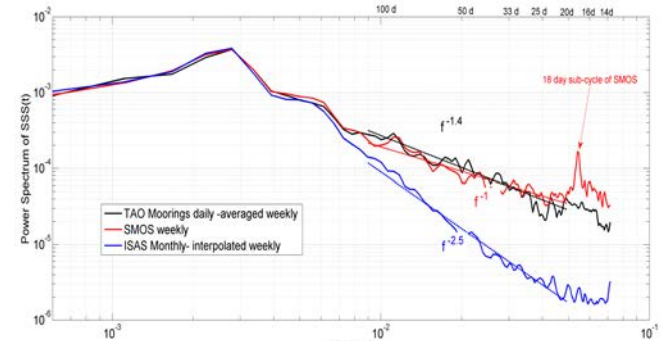

MDB files are generated for each available satellite SSS product files and all available in situ data for the duration of each satellite product.

The granularity of the MDB files follows the one of the input satellite data product files.

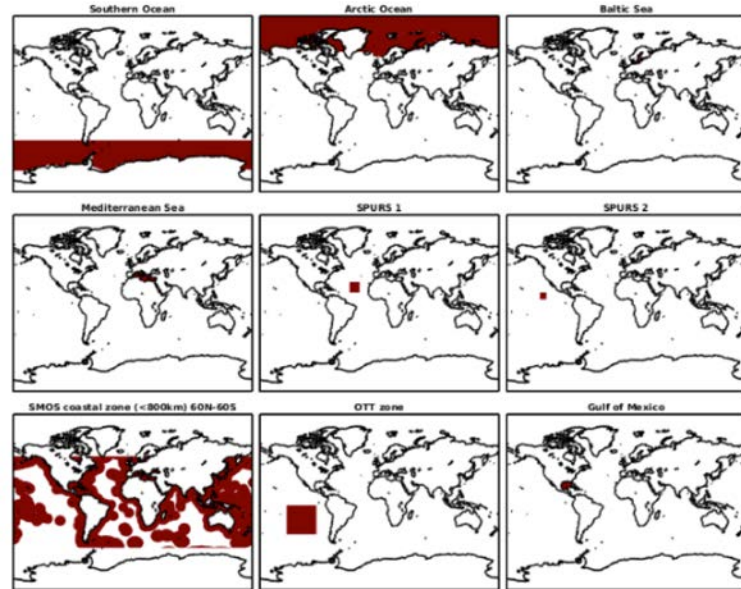

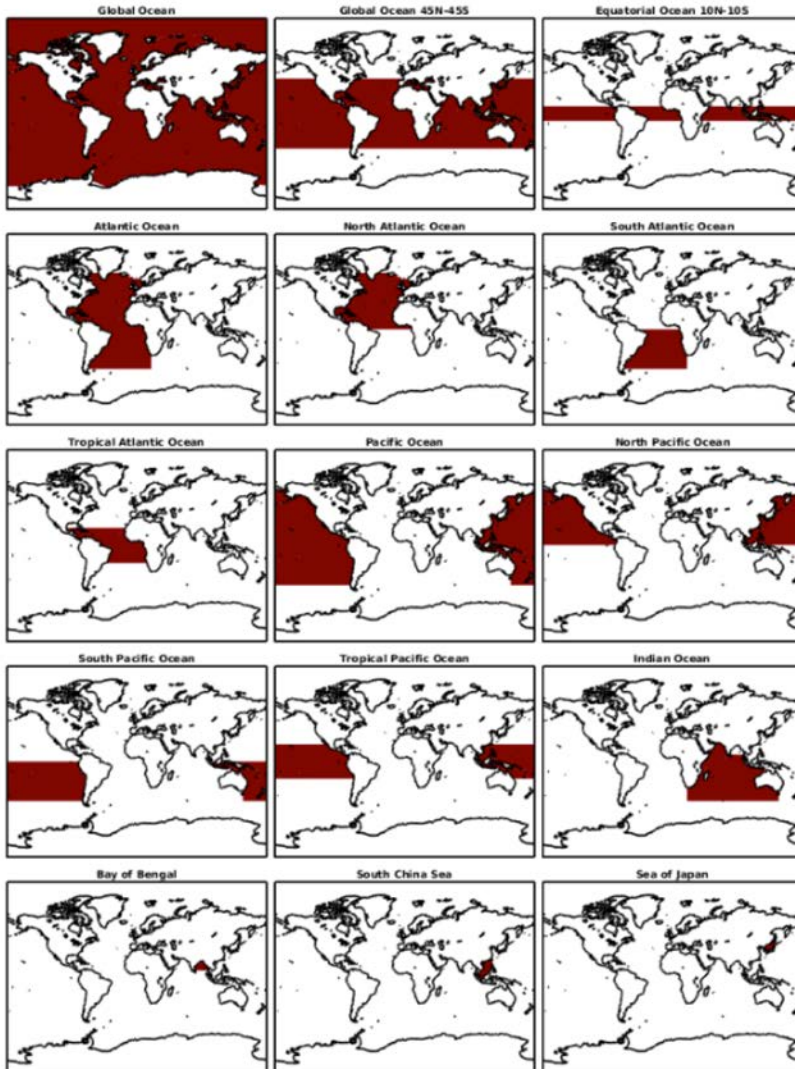

The content of the netcdf files, the in situ QC filtering and the co-localisation methods are described in details in the Match-Up analyses reports available [here](#). MDB files can be accessed using either an HTTP or FTP client using the heretofore menu:

Satellite: any In-situ: any

Satellite	In-situ	
SMOS SSS L2 v662 (ESA)	TSG (GOSUD-NRT)	FTP/HTTP
SMOS SSS L2 v662 (ESA)	TSG (GOSUD-Sailing ships)	FTP/HTTP
SMOS SSS L2 v662 (ESA)	TSG (GOSUD-research vessels)	FTP/HTTP
SMOS SSS L2 v662 (ESA)	TSG (LEGOS-DM)	FTP/HTTP
